Appendix I. Golden Meadows Fair Share Assessment

1. INTRODUCTION

This document is an Addendum to the County of Riverside's (County) certified Environmental Impact Report (EIR) No. 458 (SCH No. 2003061122), which analyzed potential environmental effects associated with Tentative Tract Map (TTM) No. 31194, Change of Zone (CZ) No. 06764, General Plan Amendment (GPA) No. 00729 and associated discretionary actions (the Approved Project). TTM No. 31194 allows development of 486 single-family residential lots, three park sites, three water quality basins, over 49 acres of natural open space and common landscape area, and associated infrastructure and utilities on a 204.7-gross-acre property north of Wickerd Road and west of Ascot Way in unincorporated Riverside County.

An EIR for the Approved Project was certified by the County on April 10, 2007 (Certified EIR). The Certified EIR addressed potential impacts to the physical environment that would or may occur from implementation of the Approved Project. This Addendum to the Certified EIR has been prepared in accordance with Sections 15162 and 15164 of the California Environmental Quality Act (CEQA) Guidelines. The City of Menifee (City), as the lead agency under CEQA, has prepared this Addendum to the Certified EIR to consider environmental impacts associated with proposed Major Modification No. PLN21-0199 and Change of Zone No. PLN21-0201, which would entail changes to Phase 4 of the approved TTM No. 31194 (Proposed Project) and changes to the approved zoning code through a zoning text amendment.

1.1 PURPOSE OF AN EIR ADDENDUM

According to CEQA Guidelines, Section 15164(a), an addendum shall be prepared if some changes or additions to a previously certified EIR are necessary, but none of the conditions enumerated in CEQA Guidelines Sections 15162(a)(1) to (3) calling for the preparation of a subsequent EIR have occurred. As stated in CEQA Guidelines Section 15162 (Subsequent EIRs and Negative Declarations):

> When an EIR has been certified or negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:
>
> 1. Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
> 2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
> 3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or negative declaration was adopted, shows any of the following:

1. Introduction

(a) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The proposed changes that would result from the development of the Proposed Project would not result in any of the conditions outlined in CEQA Guidelines Sections 15162(a)(1) to (3) because the proposed changes would not result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects requiring major revisions to the Certified EIR, and, as explained herein, no new information of substantial importance meets any of the conditions in CEQA Guidelines Section 15162 (a)(3). Accordingly, this Addendum provides the substantial evidence required by CEQA Guidelines Section 15164(e) to support the finding that a subsequent EIR is not required and an addendum to the Certified EIR is the appropriate environmental document to address changes to the Proposed Project.

As stated in CEQA Guidelines Section 15164, "Addendum to an EIR":

(a) The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

(c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision-making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.

1.2 SCOPE OF ANALYSIS FOR THIS ADDENDUM

This Addendum evaluates the proposed Major Modification No. PLN21-0199 and Change of Zone No. PLN21-0201, which would entail changes to Phase 4 of the approved Tentative Tract Map No. 31194 (Proposed Project) and changes to the approved zoning code through a zoning text amendment. The Addendum also considers whether there is any new information of substantial importance that was not known

and could not have been known with exercise of reasonable diligence at the time that the EIR was certified. The Addendum examines whether, as a result of any changes or any new information, a subsequent EIR may be required. This examination includes an analysis of the provisions of California Public Resources Code Section 21166 and Section 15162 of the CEQA Guidelines and their applicability to the Proposed Project.

As lead agency under CEQA, the City is required to evaluate the environmental impacts associated with the Proposed Project because it entails a proposed discretionary approval that is subject to CEQA. The scope of the review for project-related impacts for this Addendum is focused on the differences between impacts analyzed by the Certified EIR for the Approved Project and impacts under the Proposed Project. The Approved Project will serve as the "baseline" for evaluating the impacts of the Proposed Project. The baseline includes all applicable mitigation measures from the Certified EIR. As required by CEQA, this Addendum also addresses changes in circumstances or new information that would potentially involve new environmental impacts. Appendix A of this Addendum includes the adopted Mitigation Monitoring and Reporting Program (MMRP) for the Certified EIR. Appendix B includes an updated MMRP for the Proposed Project.

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

1.3.1 2007 Certified Environmental Impact Report

The County's Certified EIR evaluated three discretionary actions for the Approved Project:

- Tentative Tract Map (TTM No. 31194)
- Change of Zone (CZ No. 06764)
- Circulation Element General Plan Amendment (GPA No. 00729)

As required by CEQA, the County adopted an MMRP, Findings, and a Statement of Overriding Considerations. After incorporation of the City of Menifee, the Approved Project, Certified EIR, and all approvals transferred to the City. The Certified EIR found that the Approved Project would result in less-than-significant impacts with no mitigation with regard to:

- Energy Resources
- Hydrology, Flooding, and Drainage
- Land Use Consistency
- Mineral Resources
- Utilities
- Water and Wastewater

The Certified EIR found that the Approved Project would result in less-than-significant after implementation of mitigation measures with regard to:

- Aesthetics, Visual Quality, Light and Glare
- Agricultural
- Air Quality [PM-10, VOC]
- Archaeological Resources
- Biological Resources
- Circulation and Traffic [direct impacts]
- Noise
- Open Space and Recreation
- Paleontological Resources
- Schools
- Sheriff Services
- Soils, Slopes, and Erosion Potential

1. Introduction

- Disaster Preparedness
- Fire Protection
- Geology and Slope Stability
- Healthcare Services
- Libraries
- Solid Waste
- Toxic Substances
- Water Quality

The Certified EIR determined that implementation of the Approved Project would result in significant and unavoidable impacts to the following environmental topics:

- Air Quality [NOx, CO]
- Circulation and Traffic [cumulative impacts]

2. APPROVED PROJECT

2.1 PROJECT BACKGROUND

2.1.1 Approved Project Location

According to the Southern California Association of Governments' (SCAG) "Local Profiles," the Approved Project was in unincorporated Riverside County until the City of Menifee incorporated in 2008 (SCAG 2019); thus the Approved Project Site, including Phases 1 to 4 (herein referred to as the TTM 31194 site), is now in the City of Menifee. As described in the Certified EIR, the TTM 31194 site is northwest of Murrieta, southeast of Canyon Lake and Perris, and southeast of Lake Elsinore.

The TTM 31194 site is currently vacant and surrounded by Wickerd Road to the south, Garbani Road to the north, Sherman Road to the east, and Evans Road to the west, in the City of Menifee, in Riverside County (Assessor's Parcel Numbers 360-300-002, -003, -004, -005, -006, and -009 and 360-350-001). Local access is provided via Newport Road to the north, Murrieta Road to the west, and Scott Road to the south, and regional access is provided via the Interstate 215 (I-215), approximately a mile east of the TTM 31194 site.

Regional access to the east of the TTM 31194 site is provided via the Scott Road and Newport Road exits from I-215. The TTM 31194 site is bounded on the north, south, and west by vacant land and some rural residential homes. An approved tentative tract map, referred to as Hidden Hills (TTM No. 30142), is immediately to the northwest and is approved for 523 single-family residential lots and a community park and greenbelts; the property to the east consists of hills with rock outcroppings.

2.1.2 Approved Project Description

The Approved Project includes the following elements:

- **Tentative Tract Map No. 31194.** The Approved Project allowed the subdivision of the 204.7-acre site into a maximum of 486 single-family residential lots (6,000-square-foot minimum) on 101.3 acres, three neighborhood park lots on 6.8 acres, seven open space/drainage easement lots on 0.5 acre, three water quality basins on 2.7 acres, and 31 open space/landscape lots on 49.8 acres. Implementation of the Approved Project also included circulation improvements, a drainage plan, a water and sewer plan, and additional off-site improvements.

- **Change of Zone No. 06764.** The Approved Project changed the zoning classifications on the site from Residential Agriculture (One-acre minimum lot size)(R-A-1), Residential Agriculture (Five-acre minimum lot size)(R-A-5), Light Agriculture (One-acre minimum lot size)(A-1-1) and Light Agriculture (Ten acre minimum lot size)(A-1-10) to One Family Dwellings (R-1), Planned Residential (R-4) and Open Area Combined Development (R-5).

2. Approved Project

- **General Plan Amendment No. 00729.** The Approved Project established the alignment of Garbani Road and Wickerd Road. The County's General Plan Circulation Element previously showed Garbani Road extending east of Evans Road in an east-west alignment as a Major Roadway (118-foot ROW) and previously showed Wickerd Road extending east of Evans Road also in an east-west alignment as a Secondary Roadway (100-foot ROW). The Approved Project provided for the realignment of Garbani Road in a northwest-southeast alignment through the middle of the Approved Project Site as a Major Roadway (118-foot ROW) to connect to existing Wickerd Road at the Approved Project Site's southeast corner. GPA No. 00729 proposed the following:

  - Upgrade and change the alignment of Wickerd Road between Haun Road and Evans Road from a Secondary to a Major.
  - Reduce Garbani Road from an Urban Arterial to a Secondary between Haun Road and Bradley Road.
  - Reduce Garbani Road from a Major to a Collector between Bradley Road and its new terminus east of Evans Road.
  - Reduce Bradley Road from a Major to a Secondary between Craig Avenue and Garbani Road.
  - Correct a mapping error to remove an unnamed Secondary between Wickerd Road and Evans Road.

3. PROPOSED PROJECT

3.1 PROPOSED PROJECT DESCRIPTION

The TTM 31194 site was previously identified as a Planned Development by Title 9 of the City of Menifee Municipal Code. The Proposed Project will revise Section 9.155.030 of the municipal code, Planned Development Districts, which contains planned developments that were approved by the County prior to incorporation. Section 9.155.030 of the municipal code currently describes the planned development of the Approved Project; thus, revisions to the section would revise the description of the planned development to be consistent with the Proposed Project.

The Proposed Project would develop Phase 4 of the Approved Project—268 total lots on 87.59 acres—as shown in Table 1, *Proposed Project Lots*.

Table 1 Proposed Project Lots

Lot	Land Use	Acreage
1-259	Residential Lots	28.84
A	Park	2.94
B	Recreation Center	0.75
C	Access Road/Parking	0.15
D	Drainage Easement	0.04
E-G	Open Space	41.97
H	Water Quality Basin	1.30
	Public Streets	11.60
	Total	**87.59**

3.2 PROJECT SITE LOCATION

The Proposed Project would be in the same location as the Approved Project, as described in Section 2.1.1, *Approved Project Location*. It would be on the eastern part of the TTM 31194 site, north of Wickerd Road, south of Garbani Road, and west Haun Road and I-215 (Project Site).

3.2.1 Surrounding Land Uses

The Project Site has a land use designation of 2.1–5 du/ac Residential (2.1-5 R), and is zoned Planned Development District (PDO-5). General plan land use designations in the surrounding areas include Rural Residential 5 ac min (RR5) to the north and east, Rural Residential 1 ac min (RR1) and Rural Residential ½ ac min (RR1/2) to the south, and 2.1–5 du/ac Residential (2.1-5 R) to the west.

3.3 PROJECT IMPROVEMENTS

3.3.1 Residential Dwelling Units

As shown in Table 2, *Residential Dwelling Units*, with implementation of the Proposed Project, Phase 4 of the residential development would add 98 additional dwelling units for a total of 259 dwelling units compared to the 161 units proposed by the Approved Project. This would increase the overall number of proposed dwelling units over the entire TTM 31194 site (including Phases 1 to 3) from 486 to 571 dwelling units.

Table 2 Residential Dwelling Units

	Approved Project	Proposed Project	Net Change
Proposed Project (Phase 4 only)	161	259	98
TTM 31194 site (including Phases 1–3)	486	571	85*

*Note- The certified EIR for the approved project analyzed 486 residential lots; the proposed project consists of 571 residential lots. Due to tighter restrictions in water quality control (between when the original project was approved through now), new water quality basins were added in locations once approved for residential lots. The actual number of residential lots for the approved project decreased from 486 residential lots to 468 residential lots, for a reduction of 18 residential lots spread across all phases. Phase 4 decreased from 161 residential lots to 156 residential lots as shown under the latest tentative map project extension. The proposed project includes 259 residential lots for an increase of 103 residential lots.

Dwelling units under the Proposed Project would be developed as 50-foot x 80-foot lots with a minimum lot size of 4,000 square feet, and as 42-foot x 90-foot lots with a minimum lot size of 3,780 square feet.

3.3.2 Population Growth

As stated in the City of Menifee's General Plan EIR, SCAG's forecast growth projections anticipate Menifee's population to increase by 26,175 by 2035, that is, 28.1 percent of its 2020 population. Additionally, from 2020 to 2035 households are forecast to increase by 10,389, or 28.7 percent. As shown in Table 3, *Estimated Population Growth*, in accordance with the General Plan's future buildout projections, the Proposed Project would result in a population of approximately 803 residents in the 259 proposed dwelling units, and the TTM 31194 site would result in a population of approximately 1,770 residents of the 571 proposed dwelling units (including Phases 1 to 3). Thus, the Proposed Project would not result in substantial unplanned population growth either directly or indirectly, and population growth as a result of the Proposed Project would be within SCAG's forecast growth projections for the city.

Table 3. Estimated Population Growth

	Proposed Project (Phase 4 only)			TTM 31194 Site (including Phases 1 to 3)		
	Approved Project	Proposed Project	Net Change	Approved Project	Proposed Project	Net Change
Land Use Category	2.1-5 du/ac Residential (2.1-5R)	2.1-5 du/ac Residential (2.1-5R)	-	2.1-5 du/ac Residential (2.1-5R)	2.1-5 du/ac Residential (2.1-5R)	-
Average Household Size (per dwelling unit)	3.01	3.1	0.09	3.01	3.1	0.09
Proposed Units	161	259	98	486	571	85
Population	485[1]	803[2]	318	1,463[1]	1,770[2]	307

Source: City of Menifee, General Plan Housing Element 2008-2014 and Housing Element 2021-2029.
[1] Estimated population is based on the average household size of 3.01 persons per unit (Riverside County Ord. 460, Section 10.35).
[2]Estimated population is based on the average household size of 3.1 persons per unit (Housing Element 2021-2029).

3.4 PROJECT CONSTRUCTION

3.4.1 Project Phasing

The Approved Project will be completed in four phases, which would include Phase 4 (Proposed Project):

- **Phase 1**, which includes the northwestern, central, and southeastern portions of the subdivision, contains 109 residential lots and all major "backbone" infrastructure..
- **Phase 2**, which includes the southern and central portions of the subdivision, contains 109 residential lots.
- **Phase 3**, which includes the western portion of the subdivision, contains 94 residential lots.
- **Phase 4**, which includes the eastern portion of the subdivision. The Approved Project approved 161 residential lots in Phase 4, The Proposed Project contains 259 residential lots.

3.4.2 Construction Schedule

Construction of the Proposed Project is anticipated to start in December 2022 and finish in December 2027. It is anticipated that the first residential uses would be operational in January 2024. The construction would occur over approximately 60 months and include grading and excavation, trenching for site utilities and irrigation, building construction, architectural coatings, driveway and walkway construction, landscaping, and street connection improvements.

3. Proposed Project

This page intentionally left blank.

4. CEQA ANALYSIS

4.1 ENVIRONMENTAL ANALYSIS

The scope of the City's review of the Proposed Project is limited by provisions in CEQA and the State CEQA Guidelines. This review is limited to evaluating the environmental effects associated with the Proposed Project compared to the Approved Project found in the Certified EIR. This Addendum also reviews new information, if any, of substantial importance that was not known and could not have been known with the exercise of reasonable due diligence at the time the EIR was certified. This includes explanation of why the changes proposed for the Proposed Project would not result in any new significant impacts, a substantial increase in a previously identified significant impact, mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative, or mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Section 15164(b) of the CEQA Guidelines (Cal. Code of Regs., Title 14, Sections 15000 et. seq.) authorizes a lead agency to prepare an addendum to an EIR "if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Although State CEQA Guidelines Section 15164 does not stipulate the format or content of an addendum, the topical areas identified in the Certified EIR are the environmental factors evaluated in this Addendum. This comparative analysis provides the City with the factual basis for determining whether any changes in the Approved Project, any changes in circumstances, or any new information since the EIR was certified would require additional environmental review or preparation of a Subsequent EIR or Supplemental EIR.

Pursuant to Section 15162 of the State CEQA Guidelines, the City has determined, on the basis of substantial evidence in the light of the whole record, that the Proposed Project does not propose substantial changes to the Approved Project, no substantial changes in circumstances would require major revisions to the Certified EIR, and no new information of substantial importance has been revealed since the certification of EIR that would result in either new significant effects, an increase in the severity of previously analyzed significant effects, mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative, or mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

4. CEQA Analysis

4.1.1 Land Use Consistency

Approved Project Impact Analysis

The Approved Project would implement a new residential development that would be consistent with the types and uses that were allowed by the Sun City/Menifee Valley Area Plan's land use map, which designated the TTM 31194 site for Medium Density Residential (2–5 du/ac) and Rural Residential. The Certified EIR also analyzed the consistency of the Approved Project with the Riverside County General Plan, the Sun City/Menifee Valley Area Plan, the Multiple Species Habitat Conservation Program (MSHCP), the Community and Environmental Transportation Program, SCAG's Regional Comprehensive Plan and Guide and the Regional Transportation Plan, and the South California Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP). The Approved Project was determined to be consistent with Riverside County's General Plan Land Use Element, Multipurpose Open Space Element, Safety Element, Noise Element, Housing Element, and Air Quality Element as well as all the above-mentioned planning documents. The Certified EIR therefore determined that the Approved Project is generally consistent with applicable land use plans, including the County's General Plan; therefore, impacts related to implementation of the Approved Project are less-than-significant and no mitigation is required.

Approved Project Mitigation Measures

No mitigation measures were required for the Approved Project regarding land use.

Proposed Project Impact Analysis

As described in Section 3.3, Phase 4 of the residential development would add approximately 98 additional dwelling units, for a total of 259 dwelling units, compared to 161 units proposed by the Approved Project. This would increase the overall number of proposed dwelling units from 486 to 571 (including Phases 1 to 3). However, the Proposed Project would now comply with standards and regulations of Menifee's General Plan, which currently designates the Project Site as 2.1-5 du/ac Residential (2.1-5 R), and it is zoned Planned Development District (PDO-5). The Proposed Project would still be consistent with the above-mentioned planning documents—the Community and Environmental Transportation Program, MSHCP, SCAG's 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy, and SCAQMD's AQMP.

In accordance with the General Plan's future buildout projections, the Proposed Project would result in a population of approximately 803 residents in 259 dwelling units, and the TTM 31194 site (including Phases 1 to 3) is anticipated to result in a population of approximately 1,770 residents in 571 dwelling units. Thus, the Proposed Project would not result in substantial unplanned population growth either directly or indirectly, and population growth as a result of the proposed project would be within SCAG's forecast growth projections for the city. There are no new potentially significant impacts associated with the Proposed Project; therefore, no new and/or refined mitigation measures are required for issues related to land use consistency.

Proposed Project Mitigation Measure

No mitigation measures are required for the Proposed Project regarding land use.

4.1.2 Aesthetics, Visual Quality, Light and Glare

Approved Project Impact Analysis

The Certified EIR determined that the Approved Project would change views of the TTM 31194 site from surrounding areas. Views would change from predominantly agricultural and undeveloped land to single-family residential and open space uses. The Approved Project was subject to the Countywide Design Standards and Guidelines for general residential design, residential lot design, residential street design, landscaping, neighborhood entry statements, street medians, reverse frontage treatments, medians, and parkways. Changes to community character were consistent with the County General Plan's Sun City/Menifee Valley Area Plan. The TTM 31194 site is in the Mt. Palomar Observatory Special Lighting District, which was established to control the effects of skyglow on the observatory. Implementation of the Approved Project would result in the introduction of new sources of lighting, including lights for residences, parks, and streetscapes, that could adversely affect the Palomar Observatory, resulting in a potentially significant impact. Therefore, the Certified EIR required implementation of Mitigation Measure 4.2-1 to ensure impacts from lighting would be reduced to less-than-significant.

Approved Project Mitigation Measure

4.2-1 The project shall comply with the applicable provisions of Riverside County Ordinance No. 655, which was established to regulate the use of certain light fixtures, and requires evidence of compliance with the lighting standards contained therein. All outdoor lighting systems shall comply with Ordinance No. 655.

Proposed Project Impact Analysis

The Proposed Project would be within the same footprint as the Approved Project; thus, impacts to the visual quality and character of the Project Site would not be substantially more severe as a result of the Proposed Project than as a result of the Approved Project. As with the Approved Project, implementation of the Proposed Project would result in the introduction of new sources of lighting, including lights for residences, parks, and streetscapes. However, the Proposed Project would be required to comply with the City of Menifee's Municipal Code Chapter 6.01, Dark Sky Ordinance, which is the same as County Ordinance No. 655 that was in effect at the time of Approved Project approval. The City's ordinance regulates light around Mt. Palomar by restricting the use of certain light fixtures and restricting emitting light rays into the night sky that would have a detrimental effect on astronomical observation and research (Menifee 2022). The revised Proposed Project Mitigation Measure 4.2.1 is substantively the same as Certified EIR Mitigation Measure 4.2.1 and will ensure impact from lighting from the Proposed Project will be reduced to less-than-significant.

Proposed Project Mitigation Measure

4.2-1 The project shall comply with the applicable provisions of ~~Riverside County Ordinance No. 655~~ City of Menifee's Municipal Code Chapter 6.01, Dark Sky Ordinance. The Dark Sy Ordinance is the same as County Ordinance No. 655, which was established to regulate the use of certain light fixtures, and requires evidence of compliance with the lighting standards

contained therein. All outdoor lighting systems shall comply with ~~Ordinance No. 655~~ the Dark Sky Ordinance.

4.1.3 Biological Resources

Approved Project Impact Analysis

The Certified EIR determined that the Approved Project would result in impacts to approximately 173.1 acres on-site (including fuel modification thinning) and approximately two acres off-site for off-site grading and infrastructure improvements. The loss of agricultural, disturbed, and ruderal habitat is not significant because this habitat is not sensitive. The loss of Riversidean sage scrub, northern mixed chaparral, and arroyo willow/mulefat scrub are considered significant to the extent that these vegetation communities support sensitive plant and wildlife species. Pursuant to MSHCP, the Approved Project's impacts to Riversidean sage scrub constituted a significant impact and required implementation of Mitigation Measure 4.3-1 to reduce potential impacts to less-than-significant levels.

No sensitive plant species and no narrow endemic species were identified in the general biological survey report compiled, and a majority of the TTM 31194 site is unsuitable for native special status plant species associated with vernal pool wetland or alkali playa due to the gentle sloping topography, long-term clearing, and deep plowing of the land for agriculture. Additionally, the TTM 31194 site is not identified in an area required to be surveyed pursuant to the MSHCP's "Protection of Narrow Endemic Plant Species" guidelines and "Additional Survey Needs and Procedures." Therefore, focused botanical surveys were not required for the TTM 31194 site, and any impacts to sensitive plant species, if present, were not regarded as significant. The project applicant was required to comply with Riverside County Ordinance No. 4.62.070, which requires payment of an MSHCP mitigation fee to assist in providing revenue to acquire and conserve lands necessary to implement the MSHCP.

Sensitive species observed on the site include California horned lark, Cooper's hawk, northern harrier, coastal California gnatcatcher, coast horned lizard, orange-throated whiptail, western whiptail, and black-tailed jackrabbit. According to the analysis in the biology report, the Approved Project did not significantly impact these species. Although burrowing owl was not observed on the site, it has the potential to move onto the site due to its migratory nature. Potential impacts to burrowing owl were considered significant, and mitigation was required. To reduce any potential impacts to other sensitive wildlife species, the project applicant was required to comply with Riverside County Ordinance No. 4.62.070. Additionally, the TTM 31194 site is within the "Habitat Conservation Plan [HCP] for the Stephen's Kangaroo Rat in Western Riverside County, California" (1993), and the applicant was required to mitigate development of land in the HCP by paying a per acre fee to the County. If construction activities took place between February 1 and August 31 and within 150 feet of suitable nesting locations, potential impacts could occur and a focused raptor survey was required prior to construction to determine there were active nests. Therefore, the Approved Project required implementation of Mitigation Measures 4.3-2 through 4.3-5 to reduce potential project impacts to a less-than-significant level.

The Certified EIR determined that, although some wildlife movement and foraging would occur in the native vegetation, the site did not provide a densely vegetated drainage and did not connect two larger tracts of native habitat. Therefore, the TTM 31194 site was not identified as a wildlife corridor, and project implementation would not result in disturbances to local wildlife movement.

The Approved Project directly impacted 34,512.6 square feet (0.79 acre) of state streambeds, of which 1,316 square feet (0.03 acre) are state wetlands and 18,748.6 square feet (0.43 acre) are federal jurisdictional drainages. Impacts to these jurisdictional wetlands and waters was considered significant and required implementation of Mitigation Measures 4.3-6 through 4.3-9 to reduce potential impacts to a less-than-significant level. The Approved Project proposed avoidance of 27,871.74 square feet (0.64 acres of state streambeds, all of which are considered state wetlands, and 18,919.3 square feet (0.43 acres of federal jurisdictional drainages. The Approved Project also proposed the creation of three wetland basins and jurisdictional drainages contiguous with the existing drainage and habitat and following the path of the historical blue-line stream. The created habitat and drainage would include approximately 53,400 square feet (1.2 acres) of state streambeds and wetlands; of this, approximately 22,090 square feet (0.51 acre) would be federal jurisdictional drainages. These avoidance and creation measures were proposed as a way to minimize impacts and provide a preferred alternative of quality habitat in a restored blue-line drainage.

Approved Project Mitigation Measures

Vegetation Communities

4.3-1 TTM No. 31194, Lot #503 (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.

Sensitive Wildlife Species

4.3-2 Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the County of Riverside. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix E which states:

a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.

b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

4.3-3 Prior to issuance of grading permits, the applicant shall be required to pay Local Development Mitigation Fees (per County Ordinance No. 4.62.070) for implementation of the MSHCP.

4. CEQA Analysis

4.3-4 Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the project's potentially significant impacts to the Stephens' kangaroo rat.

4.3-5 If construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged.

a. The white-tailed kite is "fully-protected" by the California Department of Fish and Game. If this species is documented as nesting on the TTM 31194 site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the CDFG.

Jurisdictional Wetlands and Waters

4.3-6 Prior to the issuance of grading permits, the applicant shall submit documentation to the County of Riverside verifying that the necessary permits required by the U.S. Army Corps of Engineers (ACOE), California Department of Fish and Game (CDFG) and Regional Water Quality Control Board (RWQCB) have been obtained. The ACOE has a no net loss policy which requires that any unavoidable impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures or similar measures as approved by the ACOE, CDFG, and RWQCB would reduce impacts to ACOE and CDFG jurisdictional areas to a level less-than-significant:

a. On or off-site replacement of ACOE jurisdictional waters and wetlands at a ratio no less than 1:1;

b. On or off-site replacement of CDFG jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or

c. Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).

4.3-7 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.

4.3-8 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the County prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.

4.3-9 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area". The County of Riverside Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.

Proposed Project Impact Analysis

The following biological resources were identified in the Updated Biological Resources Assessment (L&L 2021a) and Updated Jurisdictional Delineation (L&L 2022a) that were prepared for the Proposed Project (see Appendix C).

MSHCP

The Project Site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of Public/Quasi-Public (PQP) Conserved Lands approximately 0.68 mile north-northeast of the Project Site (Ringing Rock Archaeological Site). There are no other PQP or MSHCP Conserved Lands within a mile of the site. Therefore, the Project Site is not within or near any MSHCP Core Areas or Linkages.

Sensitive Vegetation Communities

The Project Site is composed of agricultural lands and disturbed/ruderal areas, California buckwheat scrub, chamise chaparral, arroyo willow thickets, and mulefat thickets. Arroyo willow thickets and mulefat thickets are riparian vegetation communities and arroyo willow thicket is considered sensitive. The majority of arroyo willow thicket will be retained in the Avoidance Area.

Listed and Special Status Plant Species

There are no state or federally listed plants within the Project Site and it is not within U.S. Fish and Wildlife Service–designated critical habitat for any listed plant species. Two special status plant species were observed on the Project Site, long-spined spine flower and southern California black walnut, which are both covered species under the MSHCP and considered adequately conserved.

4. CEQA Analysis

Trees

There is a single immature coast live oak tree on the Project Site within the riparian area, in addition to other native and nonnative trees. The City may regulate removal or replacement of trees, and a tree survey may be required.

Listed and Fully Protected Wildlife Species

Two listed or fully protected wildlife species are on the Project Site—coastal California gnatcatcher and white-tailed kite. Both are covered species under the MSHCP and considered adequately conserved.

All observations of coastal California gnatcatchers on the Project Site were in the California buckwheat scrub habitat in the northeastern portion of the site. Under Mitigation Measure 4.3-1, this northeastern portion would be preserved as open space and covered by a conservation easement or similar mechanism. The Proposed Project would schedule construction activities outside the nesting season and/or conduct preconstruction nesting bird clearance surveys, establish avoidance buffers around any active nests, and monitor active nest sites during construction activities, as recommended.

Two white-tailed kites were observed on the Project Site in 2005 and one in 2011. No kites have been observed during more recent surveys. Although this species may forage on the Project Site and potentially suitable nesting habitat is present, no nesting has been observed. Under Mitigation Measure 4.3-3, if construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors, including avoidance buffers around active nests. Under this mitigation measure, if white-tailed kite nesting is found on the Project Site, an incidental take permit from California Department of Fish and Wildlife (CDFW) is required.

Special Status Wildlife Species

The Updated Biological Resources Assessment identified 19 special status wildlife species on the Project Site: orange-throated whiptail, coastal (western) whiptail, coast horned lizard, Cooper's hawk, southern California rufous-crowned sparrow, great egret, great blue heron (fly over), Bell's sage sparrow, burrowing owl, Costa's hummingbird, wrentit, northern harrier, Nuttall's woodpecker, California horned lark, loggerhead shrike, rufous hummingbird, Lawrence's goldfinch, California thrasher, and San Diego black-tailed jackrabbit.

The species covered under the MSHCP are considered adequately conserved. Burrowing owl is discussed below. Species not covered under the MSHCP are great egret, Costa's hummingbird, wrentit, Nuttall's woodpecker, rufous hummingbird, Lawrence's goldfinch, and California thrasher. Scheduling Project construction outside the nesting season or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests are recommended.

Five additional special status wildlife species have not been observed on the Project Site but have a low to moderate potential to occur. These species are Crotch's bumblebee, southern California legless lizard, Dulzura pocket mouse, northwestern San Diego pocket mouse, and western mastiff bat (foraging). Northwestern San

Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP.

Crotch's bumblebee was previously a candidate for state listing, but in November 2020 the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act. The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations. If Crotch's bumblebee becomes a listed or candidate species, focused surveys and incidental take permitting may be required.

Burrowing Owl

One adult burrowing owl and an occupied burrow were observed on the Project Site. Because suitable habitat is present, the MSHCP requires a preconstruction clearance survey for burrowing owl within 30 days prior to the start of site disturbance. If burrowing owls are found on-site at that time, additional mitigation is required under the MSHCP and Mitigation Measure 4.3-2. The project applicant is required to comply with Menifee Municipal Code Section 8.27.040 which requires payment of an MSHCP mitigation fee to assist in providing revenue to acquire and conserve lands necessary to implement the MSHCP.

Nesting Birds

There is habitat suitable for nesting birds (including raptors) within and adjacent to the site. Nesting birds may utilize trees, shrubs, other vegetation, and open ground on and adjacent to the site. Nesting birds are protected under state and federal laws. Project activities, including initial vegetation trimming/clearing, tree trimming/removal, ground disturbance, etc. should be avoided during the nesting season (generally February 1 to August 31). If the nesting season cannot be avoided, a nesting bird clearance survey is recommended within three days prior to the start of Project construction activities within the nesting season. If active nests are present, avoidance of nest sites is required, and a buffer of 300 to 500 feet (or as determined by a biologist) is recommended until a biologist has verified that juvenile birds are no longer dependent on the nest or the nest has otherwise become inactive. An active nest is defined as a nest with eggs, chicks, or dependent juveniles, or a nest actively being constructed or utilized for reproduction.

Wildlife Corridors

The Project Site is largely surrounded by scattered existing development, and there is no connectivity between the Project Site and conserved lands to the east and southwest. Although there may be limited local movement of wildlife on and across the Project Site, it is not within or adjacent to a wildlife corridor or potential corridor.

Jurisdictional Waters/Wetlands and MSHCP Riparian/Riverine and Vernal Pool Habitat

An ephemeral drainage with scattered riparian vegetation is present on the Project Site and mapped as a blue-line stream by the U.S. Geological Survey. The jurisdictional areas identified on the Project Site were updated as 18,814 square feet (0.43 acre) of CDFW unvegetated state streambed and 40,451 square feet (0.93 acre) of CDFW state wetland. The survey also identified 4,397 square feet (0.10 acre) of U.S. Army Corps of Engineers (USACE) waters of the U.S. (WoUS), none of which is USACE federal wetland. A total of 59,265 square feet (1.361 acres) of Western Riverside County MSHCP Riparian/Riverine habitat was identified in the Project Area.

4. CEQA Analysis

The Proposed Project would impact approximately 9,541 square feet (0.22 acre) of CDFW state streambed, 5,702 square feet (0.13 acre) of CDFW state wetland, and 1,301 square feet (0.03 acre) of USACE WoUS. Further, the Proposed Project would retain 9,273 square feet (0.21 acre) of state streambed and 34,749 square feet (0.80 acre) of state wetland, including 3,096 square feet (0.07 acre) of WoUS by incorporating these areas on-site within a Compatible Use Area.

Regulatory permits from the USACE, Regional Water Quality Control Board, and CDFW will be required for impacts to jurisdictional areas. A Determination of Biologically Equivalent or Superior Preservation (DBESP) has been prepared to evaluate impacts to MSHCP riparian/riverine habitat (see Appendix C). Mitigation Measure 4.3-5 also requires on- or off-site replacement of CDFW and federal jurisdictional waters and wetlands at a ratio of no less than 1:1 and incorporation of design features that would avoid biological impacts to off-site blue-line streams that flow to Canyon Lake. All jurisdictional areas on-site will either be impacted by Project development or incorporated into the Avoidance Area. Monitoring of Project activities adjacent to the Avoidance Area is recommended.

Pools or depressions characteristic of vernal habitat were not observed on the Project Site, and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the Project Site.

Proposed Project Mitigation Measures

The following mitigation measures from the Certified EIR have been revised to reflect the change in lead agency from the County to the City or changes in agency names. The Proposed Project would have less-than-significant impacts on biological resources after mitigation.

Vegetation Communities

4.3-1 TTM No. 31194-4 Lot E, (formerly Lot #503 of TTM 31194) (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.

Sensitive Wildlife Species

4.3-2 Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the ~~County of Riverside~~ City of Menifee. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix C which states:

a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.

b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

4.3-3 Prior to issuance of building permits, the applicant shall be required to pay Local Development Mitigation Fees (per Menifee Municipal Code section 8.27.040) for implementation of the MSHCP.

4.3-4 Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the project's potentially significant impacts to the Stephens' kangaroo rat.

4.3-5 If construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged.

a. The white-tailed kite is "fully-protected" by the California Department of Fish and ~~Game~~Wildlife. If this species is documented as nesting on the Project Site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the ~~CDFG~~CDFW.

Jurisdictional Wetlands and Waters

4.3-6 Prior to the issuance of grading permits, the applicant shall submit documentation to the City of Menifee verifying that the necessary permits required by the U.S. Army Corps of Engineers (~~ACOE~~USACE), California Department of Fish and ~~Game~~Wildlife (~~CDFG~~CDFW) and Regional Water Quality Control Board (RWQCB) have been obtained. The ~~ACOE~~USACE has a no net loss policy which requires that any unavoidable impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures or similar measures as approved by the ~~ACOE~~USACE, ~~CDFG~~CDFW, and RWQCB would reduce impacts to ~~ACOE~~USACE and ~~CDFG~~CDFW jurisdictional areas to a level less-than-significant:

a. On or off-site replacement of ~~ACOE~~USACE jurisdictional waters and wetlands at a ratio no less than 1:1;

b. On- or off-site replacement of ~~CDFG~~CDFW jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or

c. Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).

4.3-7 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.

4.3-8 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the City prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.

4.3-9 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area". The City Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.

4.1.4 Archaeological and Paleontological Resources

Approved Project Impact Analysis

The Certified EIR determined that there are no identified historic or prehistoric sites on the TTM 31194 site; however, archaeologically sensitive sites have been identified in its vicinity, and the potential for archeologically sensitive sites occurring on the TTM 31194 site exists. Therefore, the potential for disturbance to undiscovered sites during grading was considered potentially significant and required implementation of Mitigation Measures 4.4-1 through 4.4-9 to reduce potential impacts to less-than-significant.

Additionally, portions of the TTM 31194 site contain Quaternary alluvium (Qofa), which has a high potential for yielding fossils. Therefore, the potential for disturbance to paleontological resources during grading in older alluvium was considered potentially significant and required implementation of Mitigation Measures 4.4-10 through 4.4-18 to reduce potential impacts to less-than-significant.

Approved Project Mitigation Measures:

Archaeological Resources

4.4-1 Prior to any clearing, grubbing and/or earth moving activities, a qualified archaeologist shall be retained by the developer. The potential for discovery of archaeological resources on the site has been indicated as medium to high; therefore, consultation with the culturally affiliated Luiseño Tribe(s) is required. A pre-grading meeting between the archaeologist, a Native American observer, and the excavation and grading contractor shall take place to ensure an understanding of the mitigation measures required during construction.

4.4-2 (A) Prior to issuance of a grading permit, the archaeologist shall develop a mitigation plan and a discovery clause/treatment plan, which shall include mitigation monitoring to be implemented during earthmoving on the TTM 31194 site. The treatment plan shall be developed in consultation with the culturally affiliated Luiseño Tribe(s) and shall account for treatment of any archaeological remains and associated data uncovered by brushing, grubbing, or earthmoving.

(B) The project applicant shall enter into a pre-excavation agreement with the culturally affiliated Luiseño Tribe(s). The agreement shall document archeological monitoring requirements and specify the disposition of any significant resources discovered during monitoring.

4.4-3 Prior to the issuance of a grading permit and again if necessary during the development of the final project mitigation report, the project proponent shall inquire if the Pechanga Tribe has developed a standard retrievable archival system for cultural materials. If such system is in place, the Pechanga Tribe shall be given preference in housing any collection. The landowner shall relinquish ownership of all cultural resources, including all Luiseno cultural sacred items, burial goods and all archaeological artifacts that are found on the TTM 31194 site, to the culturally affiliated Luiseño Tribe(s) for proper treatment and disposition.

4.4-4 Archaeological and tribal monitoring shall be conducted on a full-time basis for all grading and ground disturbing activities, including archaeological testing, until the project archaeologist in consultation with the culturally affiliated Luiseño Tribe(s) and the County of Riverside determines that resources are not likely to be encountered.

4.4-5 If archaeological remains are found by the archaeological monitor, earthmoving shall be diverted temporarily around the deposits until they have been evaluated, recorded, excavated, and/or recovered as necessary. Earthmoving shall be allowed to proceed through the site when the archaeological supervisor, in consultation with the culturally affiliated Luiseño Tribe(s) and the County of Riverside, determines the artifacts are recovered and/or the site is mitigated to the extent necessary.

4.4-6 If possible human remains are encountered during any earthmoving activities, all work shall stop in the area in which the find(s) are present, and the Riverside County Coroner must be

notified. State law dictates that the Native American Heritage Commission (NAHC) shall be notified in the event that remains are determined to be human and of Native American decent, in accordance with California Public Resources Code Section 5097.98.

4.4-7 If a previously unknown site is encountered and it requires additional mitigation, a plan or proposal shall be prepared by the archaeologist, in consultation with the culturally affiliated Luiseño Tribe(s) and County of Riverside, outlining the plan of action that needs to be implemented to mitigate the new site.

4.4-8 Any recovered archaeological resources shall be identified, recorded, mapped and artifacts catalogued as required by standard archaeological practices. Examination by an archaeological specialist shall be included where necessary, dependent upon the artifacts, features or sites that are encountered. Specialists shall identify, date, and/or determine significance potential.

4.4-9 A final report of findings shall be prepared by the archaeologist for submission to the Eastern Information Center and the County of Riverside. The report shall describe parcel history, summarize field and laboratory methods used, if applicable, and include any testing or special analysis information conducted to support the findings.

Paleontological Resources

4.4-10 Prior to any earth moving in areas containing older alluvium, a vertebrate paleontologist retained by the project proponent and approved by the County of Riverside shall develop a storage agreement with the LACM Vertebrate Paleontology Section, San Bernardino County Museum, or another acceptable museum repository to allow for the permanent storage and maintenance of any fossil remains recovered in the project area as a result of the monitoring program, and for the archiving of associated specimen data and corresponding geologic and geographic site data at the museum repository.

4.4-11 The paleontologist shall develop a mitigation plan and a discovery clause/treatment plan that, when implemented during earthmoving activities in the project area shall allow for the recovery and subsequent treatment of any fossil remains and associated specimen and site data uncovered by these activities.

4.4-12 The paleontologist and a palaeontologic construction monitor shall attend a pre-grade meeting to explain the monitoring program to grading contractor staff and to develop procedures and lines of communication to be implemented if fossil remains are uncovered by earthmoving activities, particularly when a monitor may not be on-site.

4.4-13 Palaeontologic monitoring of earthmoving activities shall be conducted on a full-time basis by the monitor during all earthmoving activities due to the exposure of sensitive strata. Earthmoving activities in areas of the project area where previously undisturbed strata will be buried but not otherwise disturbed shall not be monitored. The supervising paleontologist shall have the authority to reduce monitoring once he determines the probability of encountering fossils has dropped below an acceptable level.

4.4-14 If the monitor finds fossil remains, earthmoving activities shall be diverted temporarily around the fossil site until the remains have been recovered and these activities are allowed to proceed through the site by the monitor.

4.4-15 If fossil remains are encountered by earthmoving activities when the monitor is not on site, these activities shall be diverted around the fossil site and the monitor called to the site immediately to recover the remains.

4.4-16 If fossil remains are found, an appropriate amount of fossiliferous rock shall be recovered from the fossil site and processed to allow for the recovery of smaller fossil remains. Test samples may be recovered from other sampling sites in the rock unit.

4.4-17 Any recovered fossil remains shall be prepared to the point of identification and identified to the lowest taxonomic level possible by knowledgeable paleontologists. The remains shall then be curated (assigned and labeled with museum repository fossil specimen numbers and corresponding fossil site numbers, as appropriate; placed in specimen trays and, if necessary, vials with completed specimen data cards) and catalogued, and associated specimen data and corresponding geologic and geographic site data shall be archived (specimen and site numbers and corresponding data entered into appropriate museum repository catalogs and computerized data bases) at the museum repository by a laboratory technician. The remains shall then be accessioned into the museum repository fossil collection, where they shall be permanently stored, maintained, and, along with associated specimen and site data, made available for future study by qualified scientific investigators.

4.4-18 A final report of results and findings shall be prepared by the paleontologist for submission to the County of Riverside and the museum repository following accessioning of the fossil collection into the museum repository fossil collection. The report shall describe the geology and stratigraphy parcel, summarize field and laboratory methods used, include a faunal list and an inventory of catalogued fossil specimens, evaluate the scientific importance of the specimens, and discuss the relationship of any newly recorded fossil site in the parcel to relevant fossil sites previously recorded from the fossil-bearing rock unit in the parcel vicinity and from correlative rock units in other regions.

Proposed Project Impact Analysis

The Proposed Project would be in the same footprint as the Approved Project; thus, potential impacts to archaeological and paleontological resources would still be present with the implementation of the Proposed Project.

According to the Phase I cultural resources assessment prepared for the Proposed Project (see Appendix D), six new cultural resources were identified in the Project Area. These include one isolated prehistoric artifact (RLCC-01-ISO), three bedrock milling sites (RLCC-02, -04, and -05), a concrete gallinaceous guzzler (RLCC-06H), and a hand-hewn wood-post and barbed-wire fence line (RLCC-07H). Isolate RLCC-01-ISO and fence line RLCC-07H are recommended not eligible for the California Register of Historical Resources (CRHR). No further consideration of RLCC-07H is required during Project planning. However, prehistoric isolated finds

4. CEQA Analysis

like RLCC-01-ISO that do not qualify as historical resources under CEQA may have cultural significance to local Native American tribes; therefore, efforts should be made to avoid direct impacts that may result in damage to or destruction of these isolated resources. The three bedrock milling sites (RLCC-02, -04, and -05) are recommended not eligible for individual listing on the CRHR, but collectively, their association with Native American settlement and subsistence activities contributes to the historical significance of the potential Christensen Webb village complex. Furthermore, viewshed and auditory analysis, limited subsurface exploration, and documentation of these sites have the potential to generate important information about prehistory; therefore, these sites, collectively, also contribute to the significance of the potential district area. Thus, RLCC-02, -04, and -05 are considered historical resources for the purposes of CEQA. In its current state, gallinaceous guzzler RLCC-06H does not appear to have sufficient integrity to convey historical significance because of its distinctive character of type, period, and method of construction. Therefore, RLCC-06H does not appear to qualify for the CRHR and is not considered a historical resource under CEQA. However, a reassessment of its integrity and potential significance may be warranted during Project construction should its apron (a shallow half-circle shaped catchment basin) and other character-defining features be found intact (L&L 2022b).

Additionally, according to the Updated Record Search and Phase I Paleontological Resources Inventory prepared for the Proposed Project, the palaeontologic resources record searches did not identify any previously recorded paleontological localities on or near the Project Site. Previously, the entire site was surveyed for palaeontologic resources, and no fossil materials were identified on-site. The potential for destruction of paleontological resources during surficial earthmoving during construction is high in rocks of Quaternary, old alluvial fan deposits, arenaceous rocks (deposits that are composed of sand grains or have a sandy texture), because significant paleontological resources have been found in similar deposits. There is no potential for paleontological resources in the granitoid rocks of the Southern California batholith. Therefore, due to this potential, any excavation below five feet in depth should be monitored by a qualified paleontologist (L&L 2021b).

Although the Proposed Project would require the implementation of revised and updated mitigation measures, they would not be considerably different than the mitigation measures analyzed in the Certified EIR.

Proposed Project Mitigation Measures:

The mitigation measures below have been revised or updated to ensure that the Proposed Project would result in less-than-significant impacts on archaeological and paleontological resources.

Archaeological Resources

4.4-1 Prior to any clearing, grubbing and/or earthmoving activities, a qualified archaeologist shall be retained by the developer. The potential for discovery of archaeological resources on the site has been indicated as medium to high; therefore, consultation with the culturally affiliated Luiseño Tribe(s) is required. A pre-grading meeting between the archaeologist, a Native American observer, and the excavation and grading contractor shall take place to ensure an understanding of the mitigation measures required during construction.

4.4-2 (A)Prior to issuance of a grading permit, the archaeologist shall develop a mitigation plan and a discovery clause/treatment plan, which shall include mitigation monitoring to be implemented during earthmoving on the Project Site. The treatment plan shall be developed in consultation with the culturally affiliated Luiseño Tribe(s) and shall account for treatment of any archaeological remains and associated data uncovered by brushing, grubbing, or earthmoving.

The mitigation and discovery/treatment plan should include a discussion of key personnel and their specific roles and responsibilities; archaeological monitoring methods; controlled excavation and/or destruction methods; environmentally sensitive areas procedures; preconstruction field surveys to identify known and unknown cultural resources; a discussion of archaeological resource classes that may be encountered during construction; and protocols for identifying, evaluating, treating, and curating archaeological resources that may be encountered. The plan should also include the following attachments: an Environmentally Sensitive Area Action Plan to preserve known bedrock milling features in place; cultural resource sensitivity training for construction personnel (i.e., Worker Environmental Awareness Program); methods for documenting bedrock milling features through close range photogrammetric documentation and viewshed analysis (i.e., direct line of sight and 180-degree viewsheds); and methods of relocating bedrock milling features to the nearest dedicated open space where they will be preserved in perpetuity. The plan will be prepared in consultation with culturally affiliated Luiseño Tribe(s).

(B) The project applicant shall enter into a pre-excavation agreement with the culturally affiliated Luiseño Tribe(s). The agreement shall document archaeological monitoring requirements and specific the disposition of any significant resources discovered during monitoring.

4.4-3 ~~Prior to the issuance of a grading permit and again if necessary during the development of the final project mitigation report, the project proponent shall inquire if the Pechanga Tribe has developed a standard retrievable archival system for cultural materials. If such system is in place, the Pechanga Tribe shall be given preference in housing any collection.~~ The landowner shall relinquish ownership of all cultural resources, including all Luiseño cultural sacred items, burial goods, and all archaeological artifacts that are found on the Project Site, to the culturally affiliated Luiseño Tribe(s) for proper treatment and disposition.

The Project proponent will hire a qualified archaeologist that meets Secretary of Interior Standards to oversee the surface collection of isolated prehistoric artifact RLCC-01-ISO. The field work shall be completed by an archaeologist and Native American monitor(s) on behalf of the culturally affiliated Luiseño Tribe(s).

4.4-4 Archaeological and tribal monitoring shall be conducted on a full-time basis for all grading and ground-disturbing activities, including archaeological testing, until the project archaeologist in consultation with the culturally affiliated Luiseño Tribe(s) and the County of Riverside determines that resources are not likely to be encountered.

4. CEQA Analysis

4.4-5 If archaeological remains are found by the archaeological monitor, earthmoving shall be diverted temporarily around the deposits until they have been evaluated, recorded, excavated, and/or recovered as necessary. Earthmoving shall be allowed to proceed through the site when the archaeological supervisor, in consultation with the culturally affiliated Luiseño Tribe(s) and the ~~County of Riverside~~ City of Menifee, determines the artifacts are recovered and/or the site is mitigated to the extent necessary.

4.4-6 If possible human remains are encountered during any earthmoving activities, all work shall stop in the area in which the find(s) are present, and the Riverside County Coroner must be notified. State law dictates that the Native American Heritage Commission (NAHC) shall be notified in the event that remains are determined to be human and of Native American descent, in accordance with California Public Resources Code Section 5097.98.

4.4-7 If a previously unknown site is encountered and it requires additional mitigation, a plan or proposal shall be prepared by the archaeologist, in consultation with the culturally affiliated Luiseño Tribe(s) and ~~County of Riverside~~ City of Menifee, outlining the plan of action that needs to be implemented to mitigate the new site.

4.4-8 Any recovered archaeological resources shall be identified, recorded, mapped, and artifact catalogued as required by standard archaeological practices. Examination by an archaeological specialist shall be included where necessary, dependent upon the artifacts, features or sites that are encountered. Specialists shall identify, date, and/or determine significance potential.

4.4-9 A final report of findings shall be prepared by the archaeologist for submission to the Eastern Information Center and the ~~County of Riverside~~ City of Menifee. The report shall describe parcel history, summarize field and laboratory methods used, if applicable, and include any testing or special analysis information conducted to support the findings.

The draft archaeological monitoring report will, at a minimum, present the results of monitoring field work, including enforcement of Environmentally Sensitive Areas; the Worker Environmental Awareness Program; efforts to relocate bedrock milling features; copies of daily monitoring logs; and appended photogrammetric documentation and viewshed analysis of bedrock milling features. If archaeological resources are discovered while implementing the monitoring program, the final monitoring report may also report on the results of lab analysis and special studies, and document the final treatment and disposition of the artifacts. The archaeological monitoring report will be completed in consultation with the culturally affiliated Luiseño Tribe(s). The Project proponent is responsible for completing a final monitoring report that addresses comments from the lead agency, Project proponent, and/or consulting tribes. Final reports must be submitted to the lead agency, Project proponent, consulting tribes, and the Eastern Information Center at the University of California, Riverside.

Paleontological Resources

~~4.4-10 Prior to any earth moving in areas containing older alluvium, a vertebrate paleontologist retained by the project proponent and approved by the County of Riverside shall develop a~~

~~storage agreement with the LACM Vertebrate Paleontology Section, San Bernardino County Museum, or another acceptable museum repository to allow for the permanent storage and maintenance of any fossil remains recovered in the project area as a result of the monitoring program, and for the archiving of associated specimen data and corresponding geologic and geographic site data at the museum repository.~~

~~4.4-11 The paleontologist shall develop a mitigation plan and a discovery clause/treatment plan that, when implemented during earthmoving activities in the project area shall allow for the recovery and subsequent treatment of any fossil remains and associated specimen and site data uncovered by these activities.~~

~~4.4-12 The paleontologist and a palaeontologic construction monitor shall attend a pre-grade meeting to explain the monitoring program to grading contractor staff and to develop procedures and lines of communication to be implemented if fossil remains are uncovered by earthmoving activities, particularly when a monitor may not be on-site.~~

~~4.4-13 Palaeontologic monitoring of earthmoving activities shall be conducted on a full-time basis by the monitor during all earthmoving activities due to the exposure of sensitive strata. Earthmoving activities in areas of the project area where previously undisturbed strata will be buried but not otherwise disturbed shall not be monitored. The supervising paleontologist shall have the authority to reduce monitoring once he determines the probability of encountering fossils has dropped below an acceptable level.~~

~~4.4-14 If the monitor finds fossil remains, earthmoving activities shall be diverted temporarily around the fossil site until the remains have been recovered and these activities are allowed to proceed through the site by the monitor.~~

~~4.4-15 If fossil remains are encountered by earthmoving activities when the monitor is not on site, these activities shall be diverted around the fossil site and the monitor called to the site immediately to recover the remains.~~

~~4.4-16 If fossil remains are found, an appropriate amount of fossiliferous rock shall be recovered from the fossil site and processed to allow for the recovery of smaller fossil remains. Test samples may be recovered from other sampling sites in the rock unit.~~

~~4.4-17 Any recovered fossil remains shall be prepared to the point of identification and identified to the lowest taxonomic level possible by knowledgeable paleontologists. The remains shall then be curated (assigned and labeled with museum repository fossil specimen numbers and corresponding fossil site numbers, as appropriate; placed in specimen trays and, if necessary, vials with completed specimen data cards) and catalogued, and associated specimen data and corresponding geologic and geographic site data shall be archived (specimen and site numbers and corresponding data entered into appropriate museum repository catalogs and computerized data bases) at the museum repository by a laboratory technician. The remains shall then be accessioned into the museum repository fossil collection, where they shall be~~

4. CEQA Analysis

~~permanently stored, maintained, and, along with associated specimen and site data, made available for future study by qualified scientific investigators.~~

~~4.4-18 A final report of results and findings shall be prepared by the paleontologist for submission to the County of Riverside and the museum repository following accessioning of the fossil collection into the museum repository fossil collection. The report shall describe the geology and stratigraphy parcel, summarize field and laboratory methods used, include a faunal list and an inventory of catalogued fossil specimens, evaluate the scientific importance of the specimens, and discuss the relationship of any newly recorded fossil site in the parcel to relevant fossil sites previously recorded from the fossil bearing rock unit in the parcel vicinity and from correlative rock units in other regions.~~

4.4-10 **Review Geotechnical Report Data.** In conjunction with the final design phase of each program-related improvement, a qualified vertebrate paleontologist will review the geotechnical report data, with particular regard to location and depth of earthmoving and the rock unit(s) being encountered. The review is for the purpose of assessing potential for fossil remains being encountered by earth moving. If previously undisturbed strata with potential for containing fossil remains will be encountered by earthmoving, measures 4.4-11 through 4.4-18 will be implemented.

4.4-11 **Museum Storage Agreement.** The Western Science Center (WSC) will be the designated museum repository for any vertebrate, invertebrate, and plant fossil remains and associated specimen data and corresponding geologic and geographic site data that might be recovered from the site as a result of the Paleontological Resource Impact Mitigation Plan (PRIMP). Prior to any earthmoving on-site, the paleontologist will develop a formal agreement with the museum regarding final disposition and permanent storage and maintenance of the fossil collection and associated data. The agreement will cover, but not necessarily be limited to, museum requirements regarding: 1) level of treatment of the collection; 2) storage and maintenance fees, if any; 3) purchase of specimen storage cabinets and drawers, as well as specimen trays, vials, specimen data cards, and other curatorial supplies, if required.

4.4-12 **Discovery Clause/Treatment Plan:** As part of the PRIMP, the paleontologist will develop a discovery clause/treatment plan (DC/TP) to allow for additional tasks—recovery; geologic mapping; fossiliferous rock sample processing; specimen preparation, identification, curation, cataloguing, data entry; specimen storage and maintenance by museum—and manpower required to treat a large or productive fossil occurrence that cannot be treated without diverting the monitor from routine monitoring. The DC/TP will also include approved procedures and lines of communication to be followed by specific individuals if fossil remains are uncovered by earthmoving, particularly when a palaeontologic monitor is not present on-site. Names and telephone numbers of contact personnel will be included in the lines of communication. The preparation of this PRIMP ensures compliance with Mitigation Measure 4.4-12.

4.4-13 **Preconstruction Meeting:** The paleontologist or field supervisor, as well as a palaeontologic construction monitor, will attend a preconstruction meeting to explain the PRIMP to construction contractor and Richland Communities staff. The presentation will summarize mitigation procedures to be employed by PRIMP personnel and will detail procedures and lines of communication, as specified in the City of Menifee Conditions of Approval, to be followed by specific project personnel when fossil remains are found on-site.

The paleontologist or field supervisor will inform the construction contractor of the following items:

1) Routine mitigation measures (primarily monitoring and test screening) to be employed by a monitor during earthmoving.

2) The potential for fossil remains being uncovered by earthmoving in particular areas of the site and the need to implement specific actions and additional mitigation measures when a fossil occurrence is uncovered by earthmoving.

3) Functions and responsibilities of the monitor when fossil remains are uncovered by earthmoving and can be recovered without diverting the monitor from monitoring—temporarily divert earth moving around fossil site until remains are evaluated and recovered, and earthmoving is allowed to proceed through the site by monitor; if approved by the construction contractor, enlist the assistance of earth-moving equipment and operator to expedite recovery of remains, obviate need for additional personnel, and reduce any potential construction delay.

4) Functions and responsibilities of the monitor when a fossil occurrence is uncovered by earthmoving and is sufficiently large or productive that it cannot be recovered without diverting the monitor from monitoring.

   a. Flag the site.

   b. Advise construction contractor to avoid fossil site until further notice (usually less than 2 days).

   c. Call the project paleontologist or field supervisor to site.

5) Functions and responsibilities of the paleontologist or field supervisor when notified by the monitor that a large or productive fossil occurrence has been uncovered by earthmoving and cannot be recovered without diverting the monitor from monitoring. Evaluate occurrence to determine if recovery is warranted.

   a. If recovery is warranted, notify construction contractor and Richland Communities of the necessity for implementing additional mitigation measures specified in DC/TP; initiate increased level of monitoring, if not already in effect, in immediate vicinity of fossil site and assigning additional personnel to PRIMP.

b. Within 24 hours after approval, mobilize recovery crew to recover occurrence; supervise recovery of occurrence and its transport to laboratory facility or to a location elsewhere at site approved by the construction contractor for initial/field processing of a fossiliferous rock sample or to laboratory facility for preparation of a fossil specimen.

c. If warranted and approved by construction contractor, enlist the assistance of the earth-moving equipment and operator to expedite recovery of occurrence.

d. To obviate need for additional personnel and reduce any potential construction delay, after recovery of occurrence, have construction contractor allow earth moving to proceed through fossil site.

e. Notify Richland Communities of recovery (or of decision not to recover fossil occurrence, if appropriate) and of authorization for earth moving to proceed through fossil site.

6) Responsibilities of the construction contractor and earth-moving equipment operators if fossil remains are uncovered by earthmoving, particularly if a monitor is not present at the site when the remains are encountered.

a. Avoid disturbance of fossil site by earth moving.

b. Notify monitor, the paleontologist, or the field supervisor and Richland Communities of the fossil occurrence.

c. Avoidance of fossil site by earthmoving activities.

d. Assist with equipment and operator to expedite recovery of occurrence.

These measures will obviate need for additional personnel, reduce any potential construction delay, and allow for earthmoving to proceed through the site following approval by monitor. The construction contractor and Richland Communities staff will be shown examples of fossil specimens similar to those that might be encountered by earthmoving on-site. If warranted, the paleontologist or field supervisor and a monitor will give a similar presentation to the earth-moving equipment operators at one of their earliest safety meetings. The operators will be instructed on recognizing fossil remains in the field, informed of their responsibilities if they observe fossil remains when the monitor is not present at the site (avoid disturbance of occurrence by earthmoving; have construction contractor call monitor to fossil site; expedite recovery of occurrence, if requested), and advised that unauthorized collecting of fossil remains is illegal.

4.4-14 **Monitoring Earthmoving:** Earthmoving will be monitored by a palaeontologic monitor only in those areas of the site where earthmoving will disturb soils greater than five feet deep (monitoring will not be conducted in areas in which soils will be buried but not disturbed).

Monitoring will not be implemented until earthmoving has reached a depth of five feet below current grade. Monitoring will consist of visually inspecting freshly exposed rock and debris for larger fossil remains and periodically dry test screening a small (25 pound) sample of rock and debris with a 20-mesh box screen for smaller vertebrate fossil remains. Monitoring will be conducted on a full-time basis. However, if too few or no fossil remains are uncovered by earthmoving in areas underlain by a particular rock unit, based on the professional recommendation of L&L, monitoring can be reduced to half or quarter time, generally, or suspended once 50 percent of earthmoving in the area underlain by the rock unit has been completed. Alternatively, if significant fossil remains are uncovered by earthmoving, based on the professional recommendation of L&L, monitoring may be increased in areas underlain by the fossil-bearing rock unit, at least in the immediate vicinity of the fossil site.

4.4-15 **Large-Specimen Evaluation and Recovery Options**

1) If a large fossil specimen (unable to be picked up easily by hand) is found as a result of monitoring earthmoving and the specimen can be recovered without significantly diverting the monitor from monitoring, earthmoving will be temporarily diverted around the fossil site and the specimen will be evaluated and, if warranted, excavated; covered with a protective plaster-impregnated burlap jacket, if required; and recovered.

2) If necessary and approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite recovery of the specimen and obviate the need for additional personnel, and the construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the specimen. A temporary field number will be assigned to the specimen; the field number, a preliminary field identification, and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will be recorded in the monitor's daily monitoring log; and the field number recorded and the fossil site location plotted on a map of the site.

3) At the end of the day the monitor or (following their next site inspection) the field supervisor will transport the fossil remains and associated data to a laboratory facility for further treatment (see Mitigation Measure 4.4-17). If appropriate, samples of fossil wood will be submitted for carbon-14 dating analysis.

4) If a fossil specimen is found and is sufficiently large that it cannot be recovered without significantly diverting the monitor from monitoring, the fossil site will be flagged with colored survey ribbon to temporarily divert earthmoving around the site, the construction contractor will be advised to avoid the site until further notice (usually less than 2 days), and the paleontologist or field supervisor will be called to the site. The grading contractor will notify Richland Communities and L&L of the occurrence and of the avoidance of the site. The paleontologist or field supervisor will evaluate the specimen for significance and continuity to determine if recovery is warranted.

4. CEQA Analysis

a. If specimen recovery is not warranted, no further action will be taken to preserve the fossil site or remains, the construction contractor will be allowed to have earthmoving proceed through the site immediately, and Richland Communities will be notified of the decision not to recover the specimen and of authorization for earthmoving to proceed through the fossil site.

b. If specimen recovery is warranted, the paleontologist or field supervisor will notify the construction contractor, Richland Communities, and the City of Menifee Community Development Director of the necessity for implementing additional mitigation measures specified in the DC/TP; initiating full-time monitoring, if not already in effect, at least in the immediate vicinity of the site in areas underlain by the fossil-bearing rock unit; and assigning additional personnel to the PRIMP. Within 24 hours after Richland Communities' approval, as secured by L&L, a recovery crew will be mobilized to recover the specimen. The size of the crew will reflect the size of the specimen and the need to recover the specimen as quickly as possible.

   The specimen will be excavated with hand tools, covered with a protective plaster-impregnated burlap jacket, and recovered. If necessary and approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite recovery of the specimen, reduce any potential construction delay, and obviate the need for additional personnel. The construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the specimen. Richland Communities will be notified of the recovery and of authorization for earthmoving to proceed through the fossil site. A temporary field number will be assigned to the specimen; the field number, a preliminary field identification, and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will be recorded in the monitor's daily monitoring log; and the field number will be recorded and the fossil site location plotted on a map of the site. The field supervisor and, if necessary, a crew member will transport the fossil specimen and associated site data to a laboratory facility for further treatment (see Mitigation Measure 4.4-17).

4.4-16 **Small-Specimen Sample Evaluation, Recovery, and Processing.** If a sufficient number of smaller vertebrate fossil remains are found at one site as a result of test screening by the monitor, the fossil site will be flagged with colored survey ribbon to temporarily divert earthmoving around the site. The construction contractor will be advised to avoid that site until further notice (usually less than two days) and, if requested by the monitor, in order to expedite recovery of a fossiliferous rock sample, reduce any potential construction delay, and obviate the need for additional personnel, the construction contractor will have earth-moving equipment and an operator acquire a rock sample from the fossil site and transport the sample, if possible, to a nearby temporary location at the site approved by the construction contractor.

The construction contractor will notify Richland Communities and L&L of the occurrence and of the avoidance of the fossil/storage site. If a sample is recovered, the construction contractor can continue earthmoving through the fossil site immediately after recovery of the sample. The monitor will notify Richland Communities of the recovery of the sample and of authorization for earthmoving to proceed through the fossil site. The paleontologist or field supervisor will be called to the fossil/storage site to determine if the fossil site/sample is sufficiently productive to warrant recovery of a large sample of fossiliferous rock to process for additional small remains. (Previous experience has demonstrated that only some fossil sites require sampling/sample processing, but more than 95 percent of the specimens recovered as a result of some mitigation programs were recovered as a result of sample processing.)

1) If the site/sample is determined too unproductive or the remains too poorly preserved or insufficiently diagnostic, no further action will be taken to preserve the fossil site/sample or remains, the construction contractor will be allowed to continue earthmoving through the fossil/storage site immediately, and Richland Communities will be notified of the decision not to recover/process a sample and of authorization for earthmoving to proceed through the fossil/storage site.

2) If sample recovery is warranted, the paleontologist or field supervisor will notify the construction contractor and the City of Menifee Community Development Director of the necessity for implementing additional mitigation measures specified in the DC/TP and assigning additional personnel to the PRIMP.

    a. Within 24 hours after approval, a recovery crew will be mobilized to recover the sample. The size of the crew will reflect the need to recover the sample as quickly as possible. The field supervisor will record the size and supervise recovery of the sample. Up to three tons of fossiliferous rock will be recovered. The sample will be excavated with hand tools for recovery. If necessary and if approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite transportation of the sample to the processing facility site, obviate the need for additional personnel, and reduce any potential construction delay. The construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the sample. The paleontologist or field supervisor will notify Richland Communities of recovery of the sample and of authorization for earthmoving to proceed through the fossil site.

    b. A temporary field number will be assigned to the sample; the field number and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will be recorded in the monitor's daily monitoring log; and the field number will be recorded and the fossil site location plotted on a map of the site. The field supervisor and, if necessary, a crew member will transport the sample to another location at the site approved by the construction contractor or to an off-site location

for initial/field processing (wet screening) of the sample. The total weight of all samples from each fossil-bearing rock unit at the site will not exceed three tons.

c. If warranted, the field supervisor will set up a field processing facility for wet screening the sample at a site location approved by the construction contractor. Wet screening will consist of sieving rock through a 20-mesh box screen (and/or finer) immersed in a tub of water to remove the smaller particles (clay and silt) from the larger particles (sand and rock) and small fossil remains. This could result in a reduction in sample weight/volume in excess of 90 percent. If necessary, rock will be soaked in an environmentally safe dispersant (citrus oil) prior to screening to improve separation of the clay particles from the rest of the sample during screening. The monitor will conduct wet screening if it can be accomplished without diverting the monitor from monitoring. If it is not possible to have the monitor perform the wet screening, a field technician will be assigned to the task. Following his next site inspection, the field supervisor will transport the concentrate (larger particles and small fossil remains) generated by initial processing to a laboratory facility for final/laboratory processing.

d. If fossil remains in the concentrate are sufficiently fossilized (dense), an environmentally safe heavy liquid (sodium polytungstate), if appropriate, will be used by the senior vertebrate paleontologist to separate the remains from the remaining sand and rock particles. When added to a beaker filled with heavy liquid, the concentrate will separate, the particles floating to the surface, and the remains sinking to the bottom, from where they are retrieved. This technique can result in a further sample weight/volume reduction in excess of 90 percent (less than 1 percent of original sample size). The final concentrate will be examined under a microscope and fossil specimens recovered from any remaining sand and rock particles. If the fossil bone in the original concentrate is not sufficiently dense for use of the heavy-liquid separation technique, the entire sample of concentrate will be sorted under a microscope for fossil remains. Recovered fossil remains will then be treated (see Mitigation Measure 4.4-17).

e. During final processing of a sample, the senior vertebrate paleontologist will continually evaluate the results of field and laboratory processing. If the sample is insufficiently productive or the fossil remains are too poorly preserved, the senior vertebrate paleontologist will have the option of discontinuing further laboratory processing of the sample, having field processing of the remainder of the sample suspended, and disposing of the remainder of the sample and unprocessed concentrate. Similarly, processing will be discontinued if, after preliminary identification of some specimens, the remains are determined insufficiently diagnostic or diverse taxonomically, or the species represented are the same as those in another sample from the fossil-bearing rock unit. (Previous experience has demonstrated that only some fossil sites require sample processing, and only some of these sites require

processing of an entire three-ton sample.) If appropriate, small splits from one or more samples will be submitted for palynological analysis.

4.4-17 **Fossil Treatment.** Final treatment of all fossil specimens recovered from the site as a result of the PRIMP will be conducted at a laboratory facility. Larger vertebrate fossil specimens will be removed from their protective jackets, prepared to the point of identification using hand tools, and hardened or stabilized with a penetrating solution by a preparator. All recovered fossil specimens will be identified to the lowest taxonomic level possible by knowledgeable vertebrate and invertebrate paleontologists and, if required, other knowledgeable paleontologists (e.g., paleobotanists, micropaleontologists, palynologists). The specimens will then be curated (assigned and labeled with museum specimen data and corresponding site numbers, placed in specimen trays and, if appropriate, vials with completed specimen data cards); catalogued (specimen and site numbers and specimen data and corresponding geologic and geographic site data, respectively, archived [entered into appropriate catalogs and computerized databases]); and accessioned into the museum fossil collection, where they will be permanently stored, maintained, and, along with associated data, made available for future study by qualified investigators. With the possible exception of tasks that might be conducted by museum staff (curation, cataloging), all treatment of fossil specimens will be conducted by a laboratory technician. Fossil specimen preparation, identification, curation, and cataloguing are now required before a fossil collection will be accepted by most museum repositories, including the WSC. Moreover, the scientific importance of a fossil specimen cannot be evaluated until the specimen has been identified to the lowest taxonomic level possible, and specimen identification often is not possible without prior preparation.

4.4-18 **Final Report.** A final technical report of findings will be prepared by the paleontologist and will describe the site's stratigraphy; summarize field and laboratory methods employed during the PRIMP; include a taxonomic list and an inventory of catalogued fossil specimens recovered as a result of the PRIMP; evaluate the scientific importance of the specimens; and discuss the relationship of the fossil assemblage from any newly recorded fossil site at the Project Site to relevant fossil assemblages from fossil sites in other areas. The report will be submitted to the contractor, Richland Communities, and the City of Menifee Community Development Director. Submission of the final report will signify completion of the PRIMP and will ensure Richland Communities' compliance with Public Resources Code Section 21081.6 (mitigation monitoring, reporting, and compliance).

4.1.5 Hydrology, Flooding, and Drainage

Approved Project Impact Analysis

The Certified EIR determined that two drainage areas would be constructed for the Approved Project—drainage area 'A', which would contain approximately 565 acres, on-site and off-site, and produce a 100-year storm runoff of 1,000.6 cubic feet per second (cfs) before retention. Two flow-by retention basins would be developed to keep the flow at or below the existing level. The two flow-by basins were designed to outlet to reduce the peak flows for the 2-year, 5-year, and 10-year storm events and for all storm velocity durations.

4. CEQA Analysis

These basins would also serve as water quality basins. Basin A-1 provided a volume of 4.04 acre-feet, and Basin A-2 provided a volume of 2.44 acre-feet. The smaller drainage area 'B' would contain 17.01 acres and produce a 100-year storm runoff of 38.6 cfs. This flow would drain to an existing canyon on the east side of the TTM 31194 site. The flow rate produced from the developed condition was less than the existing level by 2.8 cfs. However, 10-year, 24-hour-unit hydrographs calculated for the area determined that a retention basin of 0.38 acre-feet was required to retain the excess runoff generated from Area B during a 10-year storm. A 0.82-acre-foot basin was proposed to provide retention and water quality treatment.

Storm drains would be installed on-site, and detention basins were proposed to capture runoff and slow the rate of flow. The Approved Project required drainage and flood control facilities and improvements to be provided in accordance with Riverside County Flood Control and Water Conservation District requirements. Proposed grading and drainage improvements conformed to Section 2907 and 7012 of the Uniform Building Code and complied with the basin plan of the Regional Water Quality Control Board, Santa Ana Region. The Certified EIR found that the Approved Project would result in less-than-significant impacts with no mitigation.

Approved Project Mitigation Measures

No mitigation measures were required for the Approved Project regarding hydrology, flooding, and drainage.

Proposed Project Impact Analysis

The Proposed Project would increase the residential density and therefore change the hydraulic modeling of the Project Site, resulting in modification of drainage management areas (DMA) 'A', 'C', and 'D'. The Proposed Project would further subdivide the overall hydrological drainage areas into smaller drainage management areas, designated 'A' through 'L'. As described in the hydrology report prepared for the Proposed Project (see Appendix C), the Proposed Project would revise the drainage pattern of the proposed DMA 'A', 'C', and 'D'. The revised DMA 'A' comprises 95.88 acres and is tributary to water quality and detention basin 'A' in the northwesternmost corner of the TTM 31194 site. The revised DMA 'C' comprises 14.19 acres and is tributary to water quality and detention basin 'C' in the southeasternmost corner of the TTM 31194 site. The revised DMA 'D' comprises 54.51 acres and is tributary to water quality and detention basin 'D' in the center of the TTM 31194 site.

The proposed on-site water quality and detention basins are being designed to meet water quality requirements and mitigate for any increase in runoff associated with the development of areas 'A', 'C', and 'D'. Furthermore, basins A and C are being designed as "Extended Detention Basins," and each would include a concrete-lined forebay, low-flow gravel diversion channels, and a sand filter with a metered outlet structure. Basin D is designed as an infiltration basin and is sized to capture and infiltrate the water quality volume in its entirety. Development of the Proposed Project does not propose a significant change over the Approved Project; however, peak flow rates would be expected to increase with the addition of impervious area. This increase in flow rate and any increase in runoff volume would be mitigated by the proposed detention and water quality basins throughout the site. Based on the results of the hydrology report (Appendix E), the proposed drainage facilities would adequately protect the site areas from flood damage associated with the 100-year storm event. The proposed facilities, with ultimate development and adequate maintenance, would convey flows safely through the site area in accordance with City of Menifee requirements. Because the proposed drainage facilities will adequately

protect the site from flood damage and accommodate for the increased flow rate of water due to additional residential lots, the Proposed Project will result in less-than-significant impacts with no mitigation.

Proposed Project Mitigation Measures

No mitigation measures are required for the Proposed Project regarding hydrology, flooding, and drainage.

4.1.6 Water Quality

Approved Project Impact Analysis

Construction Impacts

The Certified EIR determined that the Approved Project would include grading operations that would result in potential short-term erosion and sedimentation impacts. Pursuant to requirements of the State Water Resources Control Board, the project applicant was required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for construction activities. Additionally, since the Approved Project is in the San Jacinto Watershed, it was subject to a special NPDES permit (No. CAG 618005) per Order No. 01-34. Therefore, the Approved Project was required to comply with the requirements of the NPDES construction permit by developing and implementing a Storm Water Pollution Plan (SWPPP), approved by the Executive Officer of the Regional Water Quality Control Board (RWQCB), that specified best management practices (BMP) to minimize pollutants in stormwater runoff. Implementation of Mitigation Measures 4.6-1 through 4.6-6 were required to ensure that potential impacts were reduced to less-than-significant levels.

Operational Impacts

Implementation of the Approved Project would also permanently alter the composition of the surface runoff by grading the site surfaces; by construction of impervious surfaces such as streets, roofs and parking facilities; and by irrigation of landscaped areas. In compliance with the Santa Ana RWQCB Order No. R8-2002-0011/NPDES Permit No. CAS 618033, a project-specific water quality management plan (WQMP) had been prepared for Approved Project. As specified by the WQMP, treatment control BMPs were proposed to remove pollutants typically associated with urban runoff. The Approved Project proposed several detention basins, one of which would be used for retention of stormwater, and the others of which would be used to treat the project's stormwater in addition to retention. The basins were proposed at the points where runoff from developed portions of the TTM 31194 site would enter the on-site natural drainage.

The Approved Project generated a demand for treatment of sewage, which required treatment and ultimate disposal by Eastern Municipal Water District (EMWD). EMWD would manage the TTM 31194 site's wastewater in accordance with the State Water Resources Control Board and Santa Ana RWQCB. The Approved Project complied with the basin plan adopted by the RWQCB.

Approved Project Mitigation Measures

4.6-1 The developer or builder for TTM No. 31194 shall be required, pursuant to requirements of the State Water Resources Control Board, to obtain a NPDES construction permit, prior to

issuance of grading permits. The NPDES permit will apply to all construction activities associated with the Approve Project.

Construction activities include clearing, grading, or excavation that results in the disturbance of at least five acres of total land area or activity which is part of a larger common plan of development of one acre or greater. The permit requires the applicant to develop and implement a SWPPP, that specifies BMPs to minimize pollutants in storm water runoff, as well as non-storm water discharges. Examples of BMPs include, but are not limited to energy dissipation structures and rip-rap at stormwater discharge points to stabilize flow and reduce velocities; mulching cleared or freshly seeded areas for erosion/sedimentation control; and using geotextiles and mats for erosion control during construction, storm drain inlet/outlet protection for siltation control, and slope drains for erosion control. The permit also requires a monitoring, reporting and inspection program to be developed and implemented to assure the effectiveness of the controls.

4.6-2 Prior to approval of a Final Map and final engineering drawings, the County shall verify that the Final Map and engineering drawings indicate the size and location of the structural source control BMPs specified by the project's Water Quality Management Plan.

4.6-3 Prior to issuance of occupancy permits, the County shall verify that the project's CC&Rs specify the homeowners' association ownership maintenance requirements for private storm drains and catch basins as specified in the project's Water Quality Management Plan.

4.6-4 Prior to issuance of occupancy permits, the County shall verify that the project's CC&Rs contain the activity restrictions and the property owner environmental education awareness materials for water quality specified by the project's Water Quality Management Plan.

Proposed Project Impact Analysis

Construction Impacts

As with the Approved Project, the Proposed Project would be required to obtain a NPDES permit for construction activities and a special NPDES permit (No. CAG 618005) per Order No. 01-34. The Proposed Project would be required to comply with the requirements of the NPDES construction permit by developing and implementing a SWPPP, approved by the Executive Officer of the RWQCB, that specifies BMPs to minimize pollutants in stormwater runoff. Implementation of Mitigation Measures 4.6-1 through 4.6-6 would still be required to ensure that potential impacts are reduced to less-than-significant levels.

Operational Impacts

As with the Approved Project, implementation of the Proposed Project would permanently alter the composition of the surface runoff by grading site surfaces; constructing impervious surfaces such as streets, roofs, and parking facilities; and irrigating landscaped areas. An updated WQMP has been prepared for the Proposed Project (Hunsaker & Associates 2021)(see Appendix F).

The Proposed Project would generate sewage, which would require treatment and ultimate disposal by EMWD. EMWD would manage the Project Site's wastewater in accordance with the State Water Resources Control Board and Santa Ana RWQCB. Similar to the Approved Project, the Proposed Project would comply with the basin plan adopted by the RWQCB. Therefore, the Proposed Project will result in less-than-significant impacts with mitigation measures, as described below.

Proposed Project Mitigation Measures

The mitigation measures below have been revised to show the change in jurisdiction and will result in less-than significant impacts of the Proposed Project on water quality

4.6-1 The developer or builder for TTM No. 31194 shall be required, pursuant to requirements of the State Water Resources Control Board, to obtain a NPDES construction permit prior to issuance of grading permits. The NPDES permit will apply to all construction activities associated with the proposed project.

Construction activities include clearing, grading, or excavation that results in the disturbance of at least five acres of total land area or activity that is part of a larger common plan of development of one acre or greater. The permit requires the applicant to develop and implement a SWPPP that specifies BMPs to minimize pollutants in stormwater runoff and nonstorm water discharges. Examples of BMPs include but are not limited to installing energy dissipation structures and rip-rap at stormwater discharge points to stabilize flow and reduce velocities; mulching cleared or freshly seeded areas for erosion/sedimentation control; and using geotextiles and mats for erosion control during construction, storm drain inlet/outlet protection for siltation control; and slope drains for erosion control. The permit also requires a monitoring, reporting, and inspection program to be developed and implemented to ensure the effectiveness of the controls.

4.6-2 Prior to approval of a Final Map and final engineering drawings, the ~~County~~ City shall verify that the Final Map and engineering drawings indicate the size and location of the structural source control BMPs specified by the project's Water Quality Management Plan.

4.6-3 Prior to issuance of occupancy permits, the ~~County~~ City shall verify that the project's CC&Rs specify the homeowners association's ownership maintenance requirements for private storm drains and catch basins, as specified in the project's Water Quality Management Plan.

4.6-4 Prior to issuance of occupancy permits, the ~~County~~ City shall verify that the project's CC&Rs contain the activity restrictions and the property owner environmental education awareness materials for water quality specified by the Project's Water Quality Management Plan.

4. CEQA Analysis

4.1.7 Geology and Slope Stability

Approved Project Impact Analysis

The Certified EIR determined that the TTM 31194 site is suitable for development from a geotechnical viewpoint. Based on the topography of the site, implementation of the Approved Project would create cut slopes and fill slopes with maximum heights of approximately 110 feet and 20 feet, respectively. Any existing fill encountered during site development would be removed from beneath all improvements and in areas receiving new fill. The existing fill and alluvium would be stockpiled and reused as engineered fill if it was free of vegetation and other deleterious materials. The exposed soils would be scarified to a minimum depth of eight inches, moisture-conditioned to near optimum moisture content, and recompacted to a minimum of 90 percent of the soil's maximum density. The previously removed soils, or approved import, would then be placed as properly compacted fill. All excavated materials except oversized rocks (over 8 inches in greater dimension), would be suitable for placement as compacted fill.

"Marginal ripping" to "very difficult ripping with some blasting" could be required at shallow depths in parts of the TTM 31194 site. The presence of alluvium and potential for presence of undocumented fill was a potentially significant impact that required mitigation in the form of remedial grading.

The Certified EIR determined that no active or potentially active faults were on the property; however, secondary hazards associated with seismic activity had the potential to affect the site, as described below.

- **Ground Shaking and Rupture.** No active or potentially active faults are on the TTM 31194 site; thus, the potential for ground rupture is low and was not considered significant. The seismic risk for the Approved Project area was not considered substantially different than that of other similar properties in Southern California, and the geologic investigations conducted for the site concluded that, from a geologic standpoint, the property was suitable for development as proposed. Construction of the proposed structures in accordance with the Uniform Building Code ensured that potential ground shaking impacts would not result in a significant impact.

- **Liquefaction and Seismically Induced Settlement.** Due to the shallow granitic bedrock at the TTM 31194 site, impacts associated with liquefaction and seismically induced settlement were considered unlikely.

- **Tsunami and Seiche.** The Pacific Ocean is over 25 miles west of the TTM 31194 site; there is no potential for tsunamis. Lake Skinner is approximately 21 roadway miles southeast, and Canyon Lake is approximately 11 miles northwest of the TTM 31194 site. The TTM 31194 site is outside of the dam inundation area for these lakes, as was depicted in the County's General Plan. The potential for seiches on the TTM 31194 site was deemed nonexistent.

Approved Project Mitigation Measures

4.7-1 Prior to the issuance of grading permits and in compliance with the requirements of County Ordinances, a detailed geotechnical report(s) shall be submitted to the County's Engineering Division for review and approval. The report(s) shall identify and address site-specific (a)

underlying soil conditions, (b) liquefaction potential, (c) seismic parameters and building requirements and (d) slope stability. The measures recommended by the final geotechnical report(s) shall be identified on applicable grading plans and shall be implemented to the satisfaction of the County Geologist.

4.7-2 All earthwork and grading shall be performed in accordance with all applicable requirements of the Grading and Excavation Code and the Grading Manual of the County of Riverside, in addition to the provisions of the 1997 Uniform Building Code (UBC), including Appendix Chapter 33. Grading shall also be performed in accordance with applicable provisions of the Standard Grading Specifications contained in the geotechnical reports prepared by Leighton and Associates (see EIR Appendices H1 and H2).

4.7-3 The project geotechnical engineer or qualified representative shall be notified at appropriate times to provide observation and testing services during clearing operations and to verify compliance with the recommendations made by the project geotechnical reports. In addition, any buried structures or unusual or adverse soil conditions encountered that are not described or anticipated in the geotechnical reports prepared by Leighton and Associates shall be brought to the immediate attention of the geotechnical consultant.

4.7-4 All existing low-density and potentially collapsible soil materials, such as loose manmade fill and alluvium, shall be removed to underlying competent bedrock from each area to receive compacted fill. Prior to placing structural fills, the exposed bottom surfaces in each removal area shall first be scarified to a depth of 6 inches or more, watered or air-dried as necessary to achieve near-optimum moisture conditions, and then recompacted in-place to a minimum relative compaction of 90 percent. Actual depths and horizontal limits of any removals shall be determined during grading on the basis of in-grading observations and testing performed by the project geotechnical consultant and/or engineering geologist.

4.7-5 In the event import soils are needed to achieve final design grades, all potential import materials shall be free of deleterious/oversize materials, non-expansive, and approved by the project geotechnical consultant prior to commencement of delivery onsite.

4.7-6 An observation of clearing operations, removal of unsuitable surficial materials, and general grading procedures shall be performed by the project geotechnical consultant or his representative. Fill shall not be placed without prior approval from the geotechnical consultant. The project geotechnical consultant or his representative shall also be present onsite during all grading operations to verify proper placement and adequate compaction of all fill materials, as well as to verify compliance with the other recommendations presented in the project geotechnical reports.

4.7-7 No oversized rocks (greater than 12 inches) shall be placed within 10 feet of the finished grade.

4. CEQA Analysis

4.7-8 Cut and fill slopes steeper than 3:1 (horizontal: vertical) and exceeding a vertical height of 30 feet shall be constructed with drainage terraces in accordance with Chapter 33 of the 1997 UBC.

Proposed Project Impact Analysis

Due to anticipated shallow rock conditions and proposed site grading, deep excavations on this site are expected to require heavy ripping, blasting, or other rock-reduction techniques and would likely generate oversized rock materials (rock fragments greater than 12 inches). By County standards, oversized rock should not be placed in the upper 10 feet of finished pad grades. Implementation of Mitigation Measures 4.7-1 through 4.7-8 would still be required to ensure that potential impacts are reduced to less-than-significant levels.

The Proposed Project is in the same footprint as the Approved Project; therefore, no active or potentially active faults are on the property. Secondary hazards associated with seismic activity would be similar to the Approved Project, including ground shaking and rupture, liquefaction and seismically induced settlement, and tsunami and seiche. Therefore, the Proposed Project would result in less-than-significant impacts with mitigation measures, as described below.

Proposed Project Mitigation Measures

The mitigation measures below have been revised or updated to show the changes in jurisdiction and state local regulations.

4.7-1 Prior to the issuance of grading permits and in compliance with the requirements of ~~County~~ City ordinances, a detailed geotechnical report(s) shall be submitted to the ~~County's~~ City's Engineering Division for review and approval. The report(s) shall identify and address site-specific (a) underlying soil conditions, (b) liquefaction potential, (c) seismic parameters and building requirements, and (d) slope stability. The measures recommended by the final geotechnical report(s) shall be identified on applicable grading plans and shall be implemented to the satisfaction of the ~~County~~ City Geologist.

4.7-2 All earthwork and grading shall be performed in accordance with all applicable requirements of ~~the Grading and Excavation Code and the Grading Manual of the County of Riverside~~ Chapter 8.26, Grading Regulations, of the Menifee Municipal Code, in addition to the provisions of the ~~1997 Uniform Building Code (UBC)~~2021 International Building Code. Grading shall also be performed in accordance with applicable provisions of the Standard Grading Specifications in the geotechnical reports prepared by Leighton and Associates (see ~~EIR Appendices H1 and H2~~ Appendix G).

4.7-3 The Project's geotechnical engineer or qualified representative shall be notified at appropriate times to provide observation and testing services during clearing operations and to verify compliance with the recommendations made by the Project's geotechnical reports. In addition, any buried structures or unusual or adverse soil conditions encountered that are not described or anticipated in the geotechnical reports prepared by Leighton and Associates shall be brought to the immediate attention of the geotechnical consultant.

4.7-4 All existing low-density and potentially collapsible soil materials, such as loose man-made fill and alluvium, shall be removed to underlying competent bedrock from each area receiving compacted fill. Prior to placing structural fills, the exposed bottom surfaces in each removal area shall first be scarified to a depth of six inches or more, watered or air dried as necessary to achieve near-optimal moisture conditions, then recompacted in place to a minimum relative compaction of 90 percent. Actual depths and horizontal limits of any removals shall be determined during grading on the basis of in-grading observations and testing performed by the Project's geotechnical consultant and/or engineering geologist.

4.7-5 In the event import soils are needed to achieve final design grades, all potential import materials shall be nonexpansive, free of deleterious/oversized materials, and approved by the project geotechnical consultant prior to commencement of delivery on-site.

4.7-6 An observation of clearing operations, removal of unsuitable surficial materials, and general grading procedures shall be performed by the Project's geotechnical consultant or his/her representative. Fill shall not be placed without prior approval from the geotechnical consultant. The project geotechnical consultant or his/her representative shall also be present on-site during all grading operations to verify proper placement and adequate compaction of all fill materials as well as to verify compliance with the other recommendations in the Project's geotechnical reports.

4.7-7 No oversized rocks (greater than 12 inches) shall be placed within 10 feet of the finished grade.

4.7-8 Cut-and-fill slopes steeper than 3:1 (horizontal: vertical) and exceeding a vertical height of 30 feet shall be constructed with drainage terraces ~~in accordance with Chapter 33 of the 1997 UBC~~.

4.1.8 Soils, Slopes, and Erosion Potential

Approved Project Impact Analysis

Soil Settlement and Expansion Potential

The Certified EIR determined that the majority of the on-site materials consisted of low plastic clays to fine sandy silts and generally possessed a very low to low expansion potential. Though they were not observed during field reconnaissance, it was possible that undocumented fills or other materials with an expansion potential greater than low could be encountered during construction. If present, these materials would not be suitable for structural development, and this was regarded as a potentially significant impact.

Landform Alteration

The majority of the grading and development was proposed on the southwestern portion of the site and generally avoided the steeper landforms in the northeastern part of the site, which were designated natural open space. The estimated earthwork quantities were 700,000 cubic yards (cy) of cut and 700,000 cy of fill. Grading was proposed over an approximately 165.7-acre disturbance area. Despite some alteration to the

4. CEQA Analysis

natural landform, the majority of the site's steep natural landform was in the open space parts of the site and would be permanently preserved. Project grading would conform to the County's Grading Standards. These standards included, but were not limited to maintaining natural drainage patterns, limiting street grades to less than 15 percent, ensuring slope stability, etc.

Erosion

The Approved Project proposed grading or disturbance of approximately 165.7 acres. Grading would remove the existing vegetative cover and expose the underlying soils, which increased the rate of runoff and increased erosion susceptibility. Soils with slow to medium runoff and slight to moderate erosion potentials covered approximately 45.8 percent of the TTM 31194 site; soils with medium and moderate runoff and erosion potentials covered approximately 31.2 percent of the site; and soils with rapid to high and very high runoff and erosion potential covered approximately 23 percent of the site.

Soils with high erosion susceptibility and fill materials for development areas were subject to potentially significant Project-related erosion because of the removal of stabilizing vegetation and the exposure of erodible materials to wind and water. Potential erosion impacts were greatest in steeper areas and during the first rainy season after grading (before landscaping becomes established). Erosion and dust control techniques would be implemented during construction as part of the required SWPPP and BMPs. With adherence to the SWPPP, the potential for erosion and transport of material within the proposed project boundaries and off-site was reduced to below a level of significance.

Approved Project Mitigation Measures

4.8-1 Prior to the issuance of a grading permit, an overall Conceptual Grading Plan shall be submitted for Planning Department approval. The Grading Plan shall include: 1) techniques employed to prevent erosion and sedimentation during and after the grading process; 2) approximate time frames for grading; 3) identification of areas which may be graded during high probability rain months (January through March); and 4) preliminary pad and roadway elevations.

4.8-2 Where cut and fill slopes are created higher than three feet, detailed Landscaping and Irrigation Plans shall be submitted to the Planning Department prior to Grading Plan approval. The plans shall be reviewed for type and density of ground cover, shrubs, and trees to ensure that plant material would be effective as erosion control and that all slopes would be landscaped per County Ordinance No. 457.

4.8-3 All grading procedures shall be in compliance with the Riverside County Grading Standards including requirements for erosion control during rainy months. The requirements for compliance with County's Grading Standards shall be noted on all grading plans.

4.8-4 Graded, but undeveloped land shall be maintained weed-free and planted with interim landscaping within 90 days of completion of grading, unless building permits are obtained.

4.8-5 Prior to any grading activities, a soils report and geotechnical study shall be performed to further analyze on-site soil conditions and slope stability and shall include the appropriate measures to control erosion.

4.8-6 Potential brow ditches, terrace drains, or other minor swales, determined necessary by the County of Riverside at future stages of project review, shall be lined with natural erosion control materials or concrete.

4.8-7 The locations of potentially compressible soils shall be identified on all Grading Plans. Where development is proposed in areas of compressible soils, deep foundation systems shall be used, or compressible soils shall be completely over excavated and compacted.

Proposed Project Impact Analysis

Soil Settlement and Expansion Potential

Since the Proposed Project would be constructed within the same footprint as the Approved Project, the majority of the on-site materials still consist of low plastic clays to fine sandy silts and generally possess a very low to low expansion potential.

Landform Alteration

The estimated earthwork quantities are 793,000 cy of cut and 793,000 cy of fill. Grading would occur over an approximately 177.2-acre disturbance area. Similar to the Approved Project, implementation of the Proposed Project would result in alterations to the natural landform; however, the majority of the site's steep natural landform is in the open space areas of the site and would be permanently preserved. Project grading would conform to Chapter 9, Article 4, Site Development Regulations and Performance Standards, of the City's Development Code.

Erosion

Development of the Proposed Project would include grading or disturbance of approximately 177.2 acres of the Project Site. Grading would remove the existing vegetative cover and expose the underlying soils, which would increase the rate of runoff and increase erosion susceptibility. Soils with slow to medium runoff and slight to moderate erosion potentials cover approximately 45.8 percent of the property; soils with medium and moderate runoff and erosion potentials cover approximately 31.2 percent of the property; and soils with rapid to high and very high runoff and erosion potentials cover approximately 23 percent of the property.

Soils with high erosion susceptibility as well as fill materials used for development areas would be subject to potentially significant project-related erosion because of the removal of stabilizing vegetation and exposure of erodible materials to wind and water. Potential erosion impacts would be greatest in steep areas and during the first rainy season after grading (before landscaping becomes established). Erosion- and dust-control techniques would be implemented during construction as part of the required SWPPP and its BMPs. With adherence to the SWPPP, the potential for erosion and transport of material within the Proposed Project boundaries and off-site would be reduced to below a level of significance. Therefore, the Proposed Project would result in less-than-significant impacts with mitigation measures, as described below.

4. CEQA Analysis

Proposed Project Mitigation Measures

The mitigation measures below have been revised or updated to show the changes in jurisdiction and state local regulations and ensure that potential impacts are reduced to less-than-significant levels.

4.8-1 Prior to the issuance of a grading permit, an overall Conceptual Grading Plan shall be submitted for City of Menifee Planning Department approval. The Grading Plan shall include: 1) techniques employed to prevent erosion and sedimentation during and after the grading process; 2) approximate time frames for grading; 3) identification of areas which may be graded during high probability rain months (January through March); and 4) preliminary pad and roadway elevations.

4.8-2 Where cut-and-fill slopes are created higher than three feet, detailed landscaping and irrigation plans shall be submitted to the City of Menifee Planning Department prior to Grading Plan approval. The plans shall be reviewed for type and density of ground cover, shrubs, and trees to ensure that plant material would be effective as erosion control and that all slopes would be landscaped per ~~County Ordinance No. 457~~ Title 9, Article 4, Site Development Regulations and Performance Standards, of the City's Development Code.

4.8-3 All grading procedures shall be in compliance with the ~~Riverside County Grading Standards~~ Title 9, Article 4, Site Development Regulations and Performance Standards, of the City's Development Code, including requirements for erosion control during rainy months. The requirements for compliance with ~~County's Grading~~ the City's Site Development Regulations and Performance Standards shall be noted on all grading plans.

4.8-4 Graded, but undeveloped land shall be maintained free of weeds and planted with interim landscaping within 90 days of completion of grading, unless building permits are obtained.

4.8-5 Prior to any grading activities, a soils report and geotechnical study shall be performed to further analyze on-site soil conditions and slope stability and shall include the appropriate measures to control erosion.

4.8-6 Potential brow ditches, terrace drains, or other minor swales determined necessary by the ~~County of Riverside~~ City of Menifee at future stages of project review, shall be lined with natural erosion control materials or concrete.

4.8-7 The locations of potentially compressible soils shall be identified on all Grading Plans. Where development is proposed in areas of compressible soils, deep foundation systems shall be used, or compressible soils shall be completely over excavated and compacted.

4.1.9 Agriculture

Approved Project Impact Analysis

The Certified EIR determined that large portions of the TTM 31194 site had been used for dryland farming over the past 50 years. Agricultural crops on the site primarily consisted of dryland crops, such as wheat and

barley. With implementation of the Approved Project, farming of the site would be precluded. Approximately 164.7 acres of the 204.7-acre TTM 31194 site was designated Locally Important farmland. Several properties surrounding the TTM 31194 site were zoned for agricultural use. Adjacent to the TTM 31194 site on the north side are several properties that were zoned for Residential Agriculture (R-A-1, R-A-2 1/2, and R-A-5). Along the property's western boundary, properties were zoned for Light Agriculture (A-1-1) and Residential Agriculture (R-A-1). Properties adjacent to the TTM 31194 site on the south side were zoned for Light Agriculture (R-A-1), and Rural Residential (R-R-1). Along the Approved Project's eastern boundary were lands designated for Residential Agriculture (R-A-5) and Industrial Park (I-P). In the County, the development of residential uses adjacent to agriculturally zoned properties is regulated by County Ordinance No. 625 ("Right-to-Farm"). Ordinance No. 625 states that for any agricultural operation that has been in place for at least three years and was not considered a nuisance operation at the time the operation began, no change in surrounding land uses could cause that operation to become a nuisance. Therefore, since the TTM 31194 site was within 300 feet of agriculturally zoned property, a potentially significant impact to agricultural lands required mitigation in the form of compliance with County Ordinance No. 625. Implementation of Mitigation Measure 4.9-1 reduced potential agricultural impacts to less-than-significant.

Approved Project Mitigation Measures

4.9-1 The project shall comply with the County's "Right to Farm" Ordinance (Ordinance No. 625). The ordinance is intended to provide for a means of giving notice to prospective buyers of homes in newly built subdivisions and recently subdivided parcels that they are moving into an agricultural area and that a farm has been in operation legally for at least three years shall not be or become a nuisance simply because residential uses have entered the area and are offended by the odors, dust, etc.

Proposed Project Impact Analysis

The Proposed Project would be within the same footprint as the Approved Project. As described in Section 3.1.1, the Project Site has a land use designation of 2.1–5 du/ac Residential (2.1-5 R) and is zone Planned Development District (PDO-5). General Plan land use designations in the surrounding areas include Rural Residential 5 ac min (RR5) to the north and east, Rural Residential 1 ac min (RR1) to the south, and 2.1–5 du/ac Residential (2.1-5 R) to the west.

According to the City of Menifee's General Plan Land Use Element, areas with land use designation 2.1-5 R would include single-family residential areas in which limited agricultural and animal keeping is permitted; however, intensive animal keeping is discouraged. Therefore, the Proposed Project would be required to comply with Chapter 9.235, Animal Keeping, of the City's Title 9, Planning and Zoning Ordinance.

Additionally, according to the General Plan Environmental Impact Report (EIR), General Plan buildout would place developed urban land uses closer to mapped farmland. Environmental impacts of farming, such as odors, noise, and water and air pollution, would affect future residents of the city near farmland. Such potential conflicts between agricultural and urban land uses would add to pressures on owners of agricultural land to sell and/or convert the land to nonagricultural uses (Menifee 2013a). Ordinance No. 2013-123 states that:

> . . . all resolutions, rules and regulations of the County of Riverside that have been applicable in the implementation of any County Ordinance (including but not limited to the California Environmental Quality Act) to the extent that they applied before incorporation of the City [including Ordinance No. 625], shall remain in full force and effect as resolutions, rules, and regulations of the City of Menifee until suspended or repealed by action of the City. (City of Menifee 2013b)

The Proposed Project would still require implementation of Mitigation Measure 4.9-1 to give notice to prospective buyers of homes in newly built subdivisions and recently subdivided parcels that they are moving into an agricultural area and that a farm that has been in operation legally for at least three years shall not be or become a nuisance simply because residential uses have entered the area and are offended by the odors, dust, etc. Therefore, the Proposed Project would result in less-than-significant impacts with mitigation measures, as described below.

Proposed Project Mitigation Measure

The Approved Project mitigation measure is applicable to the Proposed Project as originally adopted and will reduce potential agricultural impacts to less-than-significant levels.

4.9-1 The project shall comply with the County's "Right to Farm" Ordinance (Ordinance No. 625). The ordinance is intended to provide for a means of giving notice to prospective buyers of homes in newly built subdivisions and recently subdivided parcels that they are moving into an agricultural area and that a farm has been in operation legally for at least three years shall not be or become a nuisance simply because residential uses have entered the area and are offended by the odors, dust, etc.

4.1.10 Mineral Resources

Approved Project Impact Analysis

The Certified EIR determined that the TTM 31194 site is not designated by the State of California as a known mineral resource area, and no mineral resources were identified. Therefore, the Approved Project would not result in the loss of availability of any known mineral resources and would not result in the loss of a designated Aggregate Resource Area identified by the Riverside County General Plan.

The majority of the mines, prospect sites, and mineral resource recovery sites identified near the TTM 31194 site were generally located between 1.5 to 2.5 miles away. Therefore, the Approved Project was not an incompatible land use adjacent to a State-classified or -designated area or existing surface mine. Therefore, impacts to mineral resources were not significant and no mitigation measures were required.

Approved Project Mitigation Measures

No mitigation measures were required for the Approved Project regarding mineral resources.

Proposed Project Impact Analysis

The Proposed Project is within the same footprint as the Approved Project; thus, the Project Site is not designated by the State of California as a known mineral resource area and no mineral resources have been

identified on the Project Site. Therefore, similar to the Approved Project, the Proposed Project would not result in the loss of availability of any known mineral resources and impacts on mineral resources are less-than-significant and no mitigation measures are required

Proposed Project Mitigation Measure

No mitigation measures are required for the Proposed Project regarding mineral resources.

4.1.11 Toxic Substances

Approved Project Impact Analysis

The Certified EIR determined that the predominant land uses proposed for the TTM 31194 site, which included residential development, open space, and neighborhood park, would have little potential for storage of toxic substances other than household chemicals. Common household chemicals are of such a low concentration and volume that they pose no significant impacts to human health and safety. During grading and construction, there was a low potential for the discovery of hazardous materials, and this was regarded as a potentially significant impact. Thus, implementation of Mitigation Measures 4.11-1 through 4.11-5 were required to reduce potential project impacts to less-than-significant levels.

Household waste, such as paints, roofing materials, and solvents, would be used in building and construction of the Approved Project. Disposal of this type of waste is prohibited in County landfills. State, federal, and local laws strictly regulate the storage and use of hazardous materials. Existing control regulations reduced potential impacts associated with storage and use of hazardous materials to less-than-significant levels. Implementation of the objectives in the Riverside County General Plan with regard to toxic substances required that the safe handling, disposal, and cleanup of toxic substances be implemented in compliance with federal, state, and regional programs and regulations.

Approved Project Mitigation Measures

4.11-1 Users of household hazardous materials such as paints, roofing materials and solvents during construction shall comply with applicable federal, state, and local regulation requiring elimination and reduction of waste at the source by prevention of leakage, by segregation of hazardous waste, and by process of materials change.

4.11-2 All site improvements not removed from the property by the current owner shall be disposed of offsite, in accordance with current local, state, and federal disposal regulations. Any petroleum contaminated materials, lead-based paints or products, mercury, asbestos containing materials and/or buried trash/debris encountered during removal and/or grading shall be evaluated by an experienced environmental consultant prior to removal.

4.11-3 In the event that any subsurface hazardous materials are found during grading or construction, including soil and/or groundwater contamination, all activity in the area of discovery and/or in an appropriate radius of the area of discovery shall temporarily cease and the County of Riverside Environmental Health Department shall be notified prior to the resumption of any

construction activity in the area of discovery, the site shall be deemed safe by the appropriate entity prior to the resumption of grading and/or constructions activities.

4.11-4 If soil is to be imported or exported to or from the site during grading or other construction activities, it the transported soil shall be sampled for contaminates prior to use or disposal. Exported soil, if contaminated, shall be handled in accordance with prevailing environmental laws and regulations, including Land Disposal Restrictions, if applicable.

4.11-5 Prior to the issuance of grading permits, soil sampling shall occur to identify levels of methane, pesticides, herbicides, fertilizer, and other agricultural chemicals. Methane and chemical levels shall be verified to be within allowable limits as regulated by prevailing environmental laws and regulations prior to the issuance of building permits.

Proposed Project Impact Analysis

The Phase I Environmental Site Assessment that was prepared for the Proposed Project found potential for elevated pesticide levels on the Project Site due to its historical use as agricultural land and recommended further investigation (Hillman Consulting 2017). Twenty-four soil samples were collected and analyzed for organochlorine pesticides (OCPs), Title 22 metals, and polycyclic aromatic hydrocarbons (PAHs). All OCPs and PAHs analyzed were below the detection level. Low concentration of various metals were detected but these were all well below the California Human Health Screening Levels set by the Department of Toxic Substances Control. Due to these results, the historical use of the Project Site as agricultural land is not considered to be a recognized environmental condition in connection with the Project Site. Implementation of Mitigation Measures 4.11-1 through 4.11-5 would still be required to reduce potential Project impacts to less-than-significant levels.

Preliminary evaluations for ASTM "Non-Scope" items, such as asbestos-containing materials (ACM), lead-based paint, radon, mold, and wetlands was also performed; however, observations and research did not identify any notable concerns. The Phase I Environmental Site Assessment completed for the Proposed Project revealed no evidence of recognized environmental conditions in connection with the Project Site, including Controlled Recognized Environmental Conditions and Historical Recognized Environmental Conditions (see Appendix H). Therefore, the Proposed Project would result in less-than-significant impacts with mitigation measures, as described below.

Proposed Project Mitigation Measures

The Approved Project mitigation measures are applicable to the Proposed Project as originally adopted and will reduce potential impacts due to toxic substances to less-than-significant levels.

4.11-1 Users of household hazardous materials such as paints, roofing materials and solvents during construction shall comply with applicable federal, state, and local regulation requiring elimination and reduction of waste at the source by prevention of leakage, by segregation of hazardous waste, and by process of materials change.

4.11-2 All site improvements not removed from the property by the current owner shall be disposed of offsite, in accordance with current local, state, and federal disposal regulations. Any petroleum contaminated materials, lead-based paints or products, mercury, asbestos containing materials and/or buried trash/debris encountered during removal and/or grading shall be evaluated by an experienced environmental consultant prior to removal.

4.11-3 In the event that any subsurface hazardous materials are found during grading or construction, including soil and/or groundwater contamination, all activity in the area of discovery and/or in an appropriate radius of the area of discovery shall temporarily cease and the County of Riverside Environmental Health Department shall be notified prior to the resumption of any construction activity in the area of discovery, the site shall be deemed safe by the appropriate entity prior to the resumption of grading and/or constructions activities.

4.11-4 If soil is to be imported or exported to or from the site during grading or other construction activities, it the transported soil shall be sampled for contaminates prior to use or disposal. Exported soil, if contaminated, shall be handled in accordance with prevailing environmental laws and regulations, including Land Disposal Restrictions, if applicable.

4.11-5 Prior to the issuance of grading permits, soil sampling shall occur to identify levels of methane, pesticides, herbicides, fertilizer, and other agricultural chemicals. Methane and chemical levels shall be verified to be within allowable limits as regulated by prevailing environmental laws and regulations prior to the issuance of building permits.

4.1.12 Circulation and Traffic

Approved Project Impact Analysis

The Certified EIR determined that the Approved Project would generate a total of approximately 4,632 trip-ends per day, with 363 vehicles per hour during the AM peak hour and 489 vehicles per hour during the PM peak hour. The Approved Project would contribute vehicle trips to the freeway system, including Interstates 15 and 215. The project's incremental contribution to freeway mainlines was considered a significant cumulative impact. The Approved Project would result in a cumulatively significant impact to intersections identified in Tables 4-11 and 4-12 to the Certified EIR if the approval of other jurisdictions to intersection improvements could not be obtained. The mitigation measures would serve to reduce the direct impacts of the Approved Project on circulation and traffic to less-than-significant levels, but the freeway and potential intersection impact remained cumulatively significant.

The Approved Project would comply with SCAG's Regional Transportation Plan by meeting the anticipated need for roadway improvements. Specifically, the Approved Project proposed to realign and upgrade Wickerd Road from a Secondary (100-foot ROW) roadway to a Major (118-foot ROW) through the TTM 31194 site between Evans Road and Haun Road, and construct that segment. The project's Circulation Element General Plan Amendment (GPA No. 00729) also proposed to reduce Garbani Road from an Urban Arterial to a Secondary between Haun Road and Bradley Road, reduce Garbani Road from a Major to a Collector between Bradley Road and its new terminus east of Evans Road, reduce Bradley Road from a Major to a Secondary

4. CEQA Analysis

between Craig Avenue and Garbani Road, and to correct a mapping error to remove an unnamed Secondary between Wickerd Road and Evans Road.

Approved Project Mitigation Measures

4.12-1 Wickerd Road shall be constructed from the easterly project boundary to the westerly project boundary to align with Garbani Road at its ultimate full-section width as a Major roadway.

4.12-2 Garbani Road shall be constructed as a paved two-lane extension from Evans Road to the westerly project to provide site access with a minimum of a 32-foot pavement section.

4.12-3 Wickerd Road shall be constructed as a paved two-lane extension from the easterly project boundary to Haun Road to provide site access with a minimum of a 32-foot pavement section.

4.12-4 Internal roadways shall be constructed as Collector Roadways in accordance with County Transportation Department standards.

4.12-5 On-site traffic signing and striping shall be implemented in conjunction with detailed construction plans for the TTM 31194 site.

4.12-6 Sight distance at each project access roadway shall be reviewed with respect to standard City of Perris, Caltrans, and County of Riverside sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

4.12-7 The project applicant shall participate in the phased construction of off-site traffic signals through the County's traffic signal fee program.

4.12-8 The project applicant shall participate in funding construction of off-site improvements through payment of Scott Road and Bridge Benefit District (RBBD) fees and Transportation Uniform Mitigation Fees (TUMF).

Proposed Project Impact Analysis

Local access to the Proposed Project would be provided from two points—primary access from Wickerd Road and a secondary access from Garbani Road. All streets within this subdivision are proposed to be public. The Proposed Project is anticipated to generate a total of 5,386 trip-ends per day with 400 AM peak hour trips and 537 PM peak hour trips, which would be an increase from the 4,632 trip-ends per day with 363 vehicles per hour during the AM peak hour and 489 vehicles per hour during the PM peak hour, as stated in the Certified EIR. Additionally, the Certified EIR determined that the Approved Project would contribute vehicle trips to the freeway system, including Interstates 15 and 215. The County General Plan EIR identified segments of I-15 and I-215 as facing a 50 to 100 percent increase in traffic and operating conditions below Level of Service (LOS) D (high-density but stable flow) as a result of General Plan buildout.

Transportation improvements in the City of Menifee are funded through a combination of improvements constructed by the Project, development impact fee programs, or fair share contributions. The Transportation Uniform Mitigation Fee (TUMF) program is administered by the Western Riverside Council of Governments

(WRCOG) based upon a regional Nexus Study most recently updated in 2016 to address major changes in right-of-way acquisition and improvement cost factors. This regional program was put into place to ensure that development pays its fair share, and that funding is in place for construction of facilities needed to maintain the requisite level of service and critical to mobility in the region. TUMF is a truly regional mitigation fee program and is imposed and implemented in every jurisdiction in Western Riverside County. The Proposed Project is within the Central TUMF Zone. Additionally, the Proposed Project would be subject to City of Menifee's development impact fee (DIF) program, which includes a component for roads and signals. The City's DIF program was updated in July 2021 and discusses the local (as opposed to regional) streets and signal improvements planned for the city through buildout of the existing city limits. Therefore, as calculated in March 2022, the Project Applicant would be required to pay the resulting fair share cost of $635,642 to the City of Menifee and $5,423 to Caltrans to address the Project's contributions to off-site study area intersections, as shown in Table 2 of the Golden Meadows (TTM No. 31194) Fair Share Assessment (Appendix I). (Note that the fee calculation is as of March 2022 and may change over time. Per ordinance No. 19-268, the fees are paid at the time of building permit issuance.) Compliance with TUMF and DIF would reduce potential transportation impacts that would result from the Proposed Project.

Mitigation Measures 4.12-1 through 4.12-6 would still be required to reduce direct Project impacts on circulation and traffic to less-than-significant levels. In addition, the applicant's participation in Menifee's development impact program will further mitigate the Project's direct impacts on circulation and traffic to less-than-significant levels. For the same reasons as the Approved Project, the Project's impacts on circulation and traffic on freeways and intersections remain cumulatively significant or despite reasonable mitigation measures.

Proposed Project Mitigation Measures

The mitigation measures below have been revised or updated to reflect the change in jurisdictions.

4.12-1 Wickerd Road shall be constructed from the easterly project boundary to the westerly project boundary to align with Garbani Road at its ultimate full-section width as a Major roadway.

4.12-2 Garbani Road shall be constructed as a paved two-lane extension from Evans Road to the westerly project to provide site access with a minimum of a 32-foot pavement section.

4.12-3 Wickerd Road shall be constructed as a paved two-lane extension from the easterly project boundary to Haun Road to provide site access with a minimum of a 32-foot pavement section.

4.12-4 Internal roadways shall be constructed as Collector Roadways in accordance with ~~County Transportation Department~~ the City of Menifee Public Works Department standards.

4.12-5 On-site traffic signing and striping shall be implemented in conjunction with detailed construction plans for the Project Site.

4.12-6 Sight distance at each project access roadway shall be reviewed with respect to standard City of Menifee, City of Perris, Caltrans, and County of Riverside sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.4.12-7The

project applicant shall participate in the phased construction of off-site traffic signals through the City's development impact fee program.

4.12-8 The project applicant shall participate in funding construction of off-site improvements through Transportation Uniform Mitigation Fees (TUMF).

4.12-9 Based on the traffic signal warrant analysis, the intersection of Haun Road and Wickerd Road would warrant a traffic signal after the 275th residential dwelling unit.

4.1.13 Air Quality

Approved Project Impact Analysis

The Certified EIR determined that short-term emissions during construction of the Approved Project would be significant for NOx (construction equipment exhaust), PM-10 (construction dust) emissions, and VOCs (architectural surface coatings). Such emissions included on-site generation of dust and equipment exhaust as well as off-site emissions from construction, employee commuting, and/or trucks delivering building materials. Cumulative long-term emissions were significant for CO (carbon monoxide)(mobile source emissions).

According to the Certified EIR, the greatest project-related air quality concern centered on the 4,632 new vehicle trips that would be generated at completion of the Approved Project. For typical Riverside County trip lengths (approximately 7.5 miles), additional vehicle travel from project implementation would be 35,500 vehicle miles traveled (VMT). Project-related emissions were below the SCAQMD standards for all emission levels except VOCs during the opening year (2007) of the Approved Project. This was regarded as a short-term significant impact on air quality. In addition, the Approved Project contributed to the non-attainment of federal air quality standards in the South Coast Air Basin.

The Certified EIR found that mitigation measures 4.13-1 through 4.13.5 would reduce the impact of the Project on air quality resulting from PM-10 and VOC to less-than-significant levels. However, the Certified EIR found that impacts of NOx, and CO were cumulatively significant and unmitigable with reasonable mitigation measures. The Certified EIR found no feasible, project specific mitigation for long-term CO emissions was available.

Approved Project Mitigation Measures

Construction Activities

4.13-1 Prior to the issuance of grading permits, the owner/permittee shall submit an accelerated construction dust abatement management program to the County of Riverside. This involves developing a dust control program to supplement the routine watering that constitutes best available control measures (BACM's) in excess of any minimum SCAQMD Rule 403 requirements. BACM's that may be adopted and integrated into an enhanced dust control program might include hydroseeding previously disturbed areas while awaiting construction, adding chemical binders or surfactants to increase the effectiveness of watering, and/or early paving or chip sealing of roads. Soil disturbance should be terminated when high winds (>25 mph) make dust control extremely difficult.

4.13-2 The project applicant/contractor shall reduce "spill-over" effects by preventing soil erosion, washing dirt from vehicles entering public roadways, and washing/sweeping project access to public roadways on a regular schedule.

4.13-3 All trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.

Construction Emissions (NOx)

4.13-4 (A) Prior to construction commencement for each phase of the proposed development, emissions control from on-site equipment through a routine mandatory program of low emissions tune-ups shall be required.

(B) Electric or natural gas powered construction equipment shall be used as feasible as determined by the construction superintendent. Diesel-powered

(C) During construction, electricity should be used from power poles instead of from portable generators as feasible as determined by the construction superintendent.

Volatile Organics (VOC)

4.13-5 The application of architectural surface treatments (i.e., paint, etc.) shall be limited to 100 gallons per day over the project buildout lifetime using the most currently required low-VOC paint (100 grams or less of VOC per liter) and high pressure-low volume (HPLV) paint applicators.

Proposed Project Impact Analysis

Similar to the Approved Project, short-term emissions would occur during buildout of the Proposed Project. Such emissions include on-site generation of dust and equipment exhaust, and off-site emissions from construction, employee commuting, and/or trucks delivering building materials be significant for NOx (construction equipment exhaust), PM-10 (construction dust) emissions, and VOC (architectural surface coatings); and cumulative long-term emissions would be significant for CO (carbon monoxide)(mobile source emissions). Implementation of Mitigation Measures 4.13-1 through 4.13-5 would still be applicable to the Proposed Project, and would continue to reduce impacts due to construction-related PM10 and VOC emissions to a less-than-significant level. However, reasonable project-specific mitigation measures for NOx, and CO (long-term mobile source emissions) would not reduce the level of "excess" cumulative emissions to below the SCAQMD threshold; thus, NOx, and CO mobile source emissions impact would remain cumulatively significant. No feasible, project specific mitigation for long-term CO emissions is available. While the Proposed Project would result in 98 additional dwelling units within Phase 4 of the Proposed Project, no new significant impacts or substantial increase in severity of impacts would occur with the development of the Proposed Project when compared to the Approved Project.

4. CEQA Analysis

Proposed Project Mitigation Measures

The mitigation measures from the Certified EIR have been revised or updated to reflect the change in jurisdictions.

Construction Activities

4.13-1 Prior to the issuance of grading permits, the owner/permittee shall submit an accelerated construction dust abatement management program to the ~~County of Riverside~~ City of Menifee. This involves developing a dust control program to supplement the routine watering that constitutes best available control measures (BACM) in excess of any minimum SCAQMD Rule 403 requirements. BACMs that may be adopted and integrated into an enhanced dust control program might include hydroseeding previously disturbed areas while awaiting construction, adding chemical binders or surfactants to increase the effectiveness of watering, and/or early paving or chip sealing of roads. Soil disturbance should be terminated when high winds (>25 mph) make dust control extremely difficult.

4.13-2 The project applicant/contractor shall reduce "spill-over" effects by preventing soil erosion, washing dirt from vehicles entering public roadways, and washing/sweeping project access to public roadways on a regular schedule.

4.13-3 All trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.

Construction Emissions (NOx)

4.13-4 (A) Prior to construction commencement for each phase of the proposed development, emissions control from on-site equipment through a routine mandatory program of low emissions tune-ups shall be required.

(B) Electric or natural gas powered construction equipment shall be used as feasible as determined by the construction superintendent. Diesel-powered

(C) During construction, electricity should be used from power poles instead of from portable generators as feasible as determined by the construction superintendent.

Volatile Organics (VOC)

4.13-5 The application of architectural surface treatments (i.e., paint, etc.) shall be limited to 100 gallons per day over the project buildout lifetime using the most currently required low-VOC paint (100 grams or less of VOC per liter) and high pressure-low volume (HPLV) paint applicators.

4.1.14 Noise

Approved Project Impact Analysis

Construction-Related Impacts

The Certified EIR determined that construction activities, especially heavy equipment, would create short-term noise increases near the TTM 31194 site. Because portions of the TTM 31194 site are underlain with hard rock deposits (undifferentiated Granitic Bedrock), blasting, and rock-crushing could be necessary to achieve suitable development pads. Blasting and crushing could create noise and vibration impacts in excess of typical heavy equipment operations impacts.

Noise impacts would be significant if they caused a violation of any adopted standards. The Riverside County standards for stationary source noise impacts required that the project not produce noise levels that caused the exterior noise environment at any surrounding property with a habitable dwelling to exceed 65 dBA Leq between the daylight hours of 7:00 a.m. and 10:00 p.m. and by 45 dBA Leq between the hours of 10:00 p.m. and 7:00 a.m. However, short-term construction activities are exempt from compliance with numerical noise ordinance standards if the activity occurs during less noise-sensitive hours. Construction noise impacts were thus minimized by time restrictions placed on grading permits. In compliance with County Ordinance No. 457.84, these time limits created a less-than-significant temporary noise impact during construction activities.

Operational Impacts

Completion of the Approved Project resulted in project-related traffic that caused an incremental increase in noise levels throughout the Menifee Valley area. Traffic noise impacts are generally analyzed both to ensure that the project will not adversely impact the acoustic environment of the surrounding community, as well as to insure that the TTM 31194 site is not exposed to an unacceptable level of noise resulting from the ambient noise environment acting upon the project. Development projects in the county were required to comply with County standards for roadway traffic noise mitigation. These standards are based upon the design capacity for a given type of roadway.

Approved Project Mitigation Measures

Short-Term Construction Impacts

4.14-1 Construction activities shall comply with County Noise Ordinance No. 457, relating to construction noise.

4.14-2 Construction shall be restricted to the hours of 7 AM – 5 PM weekdays and Saturdays.

4.14-3 If blasting, drilling or rock crushing occur within 800 feet of any occupied residence, temporary noise barriers (berms, walls, etc.) shall be erected to mitigate noise from these activities to an exterior noise level of 65 dB(A) or less at the nearest residential lot line.

4. CEQA Analysis

4.14-4 Prior to any blasting operations, all residences within 800 feet of any potential blast location shall be notified in writing of the blasting schedule, and again within a minimum of 72 hours in advance of blasting.

4.14-5 All construction vehicles or equipment, whether fixed or mobile, shall be equipped with properly operating and maintained mufflers.

4.14-6 Stockpiling and/or vehicle staging areas shall be located as far as practical from occupied residences.

Long-Term Potential Noise Impacts

4.14-7 Prior to the issuance of occupancy permits for affected lots, solid barriers (walls, berms or a combination thereof) shall be provided in the following locations:

a. 7.5-foot high masonry block walls or combination berm and block wall shall be constructed along Lots 218 to 220 and 229 to 239 on Wickerd Road.

b. 7-foot high masonry block walls or combination berm and block wall shall be constructed along Lots 1 to 6, 51 to 69, 71, 72, 83 to 85, 162 to 168, 292, 293, 304, 305, 313, 314, and 320 to 326 on Wickerd Road.

c. 6-foot high masonry block wall/privacy wall or combination berm and block wall shall be constructed along Lots 391 to 403 on Evans Road.

d. Corner Wrap Around and Open Space Lots masonry block walls or combination berm and block wall shall be constructed along those lots along Wickerd Road that have been identified in the County's review of the acoustical analysis. The height shall be determined by the adjacent wall height. These walls shall be erected so that the top of each wall extends at least 6 to 7.5 feet (depending on location) above the pad elevation of the shielded lot. In cases where the road is elevated above the pad, the wall shall extend at least 6 to 7.5 feet (depending on location) above the highest point between the homes and the road. Final noise barrier heights should be determined when final grading plans show lot location, precise road, and pad elevations.

4.14-8 Mechanical ventilation (e.g. air conditioning) shall be provided for all homes located adjacent to Wickerd Road and Evans Road.

4.14-9 Upgraded windows with a Sound Transmission Class (STC) rating 30 or higher shall be installed in all homes located adjacent to Wickerd Road.

4.14-10 To minimize the potential interior noise impacts, homes facing Wickerd Road and Evans Road should be provided with weather-stripped solid core exterior doors and exterior wall/roof assembles free of cut-outs and openings.

4.14-11 Prior to issuance of building occupancy permits, the applicant shall provide the County of Riverside Department of Public Health with an interior acoustical report for review and approval. The report must demonstrate that the interior noise of those homes along Wickerd Road and Evans Road has been reduced to at or below 45 Ldn.

Proposed Project Impact Analysis

Construction-Related Impacts

Similar to the Approved Project, construction activities during the development of the Proposed Project, especially heavy equipment, would create short-term noise increases near the Project Site. Since the Proposed Project would be within the same footprint as the Approved Project, portions of the Project Site are still underlain with hard rock deposits (undifferentiated Granitic Bedrock); thus, blasting and rock-crushing may be necessary to achieve suitable development pads. Blasting and crushing may create noise and vibration impacts in excess of typical heavy equipment operations impacts.

Noise impacts would be significant if they caused a violation of any adopted standards. The City of Menifee standards for stationary source noise impacts require that the project must not produce noise levels that cause the exterior noise environment in any surrounding property that contains a habitable dwelling to exceed 55 dBA Leq between the daylight hours of 7:00 a.m. and 10:00 p.m. and by 50 dBA Leq between the hours of 10:00 p.m. and 7:00 a.m. In accordance with Title 5, Section 5-2-5, of the Menifee Municipal Code, no person shall engage in, cause or permit any person to be engaged in construction activities in any residential or commercial district between the hours of 9:00 pm of one day and 6:00 am of the following day. Additionally, no person shall operate or permit to be operated on any private property, or on the public way within any residential or commercial district(s), any power equipment used for home or building repair or grounds maintenance, or any construction equipment used for construction activities, between the hours of 10:00 pm of one day and 7:00 am of the next day. Such power equipment shall include, but not be limited to, lawn mowers, garden tools, snow removal equipment, electric or chain saws, pavement breakers, log chippers, riding tractors, or powered hand tools.

Operational Impacts

As with the Approved Project, completion of the Proposed Project would result in project-related traffic which would cause an incremental increase in areawide noise levels throughout the Menifee Valley area. Traffic noise impacts are generally analyzed both to insure that the project will not adversely impact the acoustic environment of the surrounding community, as well as to insure that the Project Site is not exposed to an unacceptable level of noise resulting from the ambient noise environment acting upon the project.

Proposed Project Mitigation Measures

Short-Term Construction Impacts

4.14-1 Construction activities shall comply with ~~County Noise Ordinance No. 457~~ Menifee Municipal Code Section 8.01.101, relating to construction noise.

4. CEQA Analysis

4.14-2 Construction shall be restricted to the hours of ~~7 AM – 5 PM~~ 6:30 am to 7:00 pm weekdays and Saturdays.

4.14-3 If blasting, drilling or rock crushing occur within 800 feet of any occupied residence, temporary noise barriers (berms, walls, etc.) shall be erected to mitigate noise from these activities to an exterior noise level of 65 dB(A) or less at the nearest residential lot line.

4.14-4 Prior to any blasting operations, all residences within 800 feet of any potential blast location shall be notified in writing of the blasting schedule, and again within a minimum of 72 hours in advance of blasting.

4.14-5 All construction vehicles or equipment, whether fixed or mobile, shall be equipped with properly operating and maintained mufflers.

4.14-6 Stockpiling and/or vehicle staging areas shall be located as far as practical from occupied residences.

Long-Term Potential Noise Impacts

4.14-7 Prior to the issuance of occupancy permits for affected lots, solid barriers (walls, berms or a combination thereof) shall be provided in the following locations:

a. 7.5-foot-high masonry block walls or combination berm and block wall shall be constructed along Lots 61-63 and 72-84 of TTM 31194-1 on Wickerd Road.

b. 7-foot-high masonry block walls or combination berm and block wall shall be constructed along Lots 3-4, 15-16, 24-25, 31-32, of TTM 31194-1, Lots 1, 3-7 of TTM 31194-2 and Lots 1-4, 114-138 and 251-259 of TTM 31194-4 on Wickerd Road.

c. 6-foot-high masonry block wall/privacy wall or combination berm and block wall shall be constructed along Lots 31-43 of TTM 31194-3 on Evans Road.

d. **Corner Wrap Around and Open Space Lots.** Masonry block walls or combination berm and block wall shall be constructed along those lots along Wickerd Road that have been identified in the County's review of the acoustical analysis. The height shall be determined by the adjacent wall height. These walls shall be erected so that the top of each wall extends at least 6 to 7.5 feet (depending on location) above the pad elevation of the shielded lot. In cases where the road is elevated above the pad, the wall shall extend at least 6 to 7.5 feet (depending on location) above the highest point between the homes and the road. Final noise barrier heights shall be determined when final grading plans show lot location, precise road, and pad elevations.

4.14-8 Mechanical ventilation (e.g., air conditioning) shall be provided for all homes adjacent to Wickerd Road and Evans Road.

4.14-9 Upgraded windows with a Sound Transmission Class (STC) rating 30 or higher shall be installed in all homes adjacent to Wickerd Road.

4.14-10 To minimize the potential interior noise impacts, homes facing Wickerd Road and Evans Road shall be provided with weather-stripped, solid-core exterior doors and exterior wall/roof assemblies free of cut-outs and openings.

4.14-11 Prior to issuance of building occupancy permits, the applicant shall provide the City of Menifee Building and Safety Department with an interior acoustical report for review and approval. The report must demonstrate that the interior noise of those homes along Wickerd Road and Evans Road has been reduced to or below 45 Ldn.

4.1.15 Open Space, Parks, and Recreation

Approved Project Impact Analysis

The Certified EIR determined that the open space and recreation plan for the Approved Project provided for approximately 51.1 acres (25 percent) of the TTM 31194 site to be set aside for natural open space. Additionally, 6.4 acres were allocated to neighborhood parks. Overall, approximately 60.7 acres (29 percent of the entire TTM 31194 site) was devoted to open space and recreational uses.

It was anticipated that existing regional recreational facilities, such as the regional parks and state recreation areas, provided ample regional recreational uses for residents of the Approved Project. The TTM 31194 site was identified by the County General Plan for residential use and was not designated to meet regional parkland needs.

Typically, the County required 5.0 acres of parkland for each 1,000 residents to satisfy Quimby Act standards, as expressed in Ordinance No. 460, Section 10.35. Based on Riverside County Ordinance No. 460, Section 10.35, and State Quimby Act requirements, 36.35 acres of open space and 7.3 acres of neighborhood/community parkland were required to support residents of the Approved Project. The Approved Project proposed 54.3 acres of open space and 6.4 acres of parkland to meet these requirements. Also, passive walking trails were proposed along the central drainage area to further increase recreational opportunities. However, the proposed 6.4 acres of neighborhood park space was 0.9 acre less than what was required. Mitigation Measure 4.15-1 reduced potential impacts to less-than-significant.

Approved Project Mitigation Measures

4.15-1 The project applicant shall be required to pay an in-lieu park fee to the County for its 0.9-acre park deficiency prior to the issuance of building permits.

Proposed Project Impact Analysis

As shown in Table 1, *Proposed Project Lots*, in Section 3.1 of this Addendum, the Proposed Project would include approximately 3.69 acres of parkland and approximately 41.30 acres of open space within the Project Site. The City of Menifee has approximately 132 acres of developed park and recreation facilities (Menifee 2013). In

addition to city parks, regional parks in Riverside County provide recreational opportunities for Menifee residents.

As stated in the City's General Plan EIR, proposed projects would be required to comply with the Quimby Act, California Government Code Section 66477, which requires the dedication of land and/or fees for park and recreational purposes as a condition of approval of a tentative map or parcel map. The City of Menifee has a standard of 5 acres of parkland per 1,000 persons. The Proposed Project is anticipated to have a population of approximately 803 residents and would be required to dedicate approximately 1.3 acres for park and recreational purposes. As stated above, the Proposed Project would include approximately 45.66 acres of parkland and open space. Thus, as stated in the General Plan, development fees would not be required for the Proposed Project, in accordance with the Quimby Act. The proposed project would not have an adverse physical impact on any parks or necessitate the construction of new parks. The proposed project would include its own recreation facilities and an outdoor play area to serve the residents. The proposed project would not result in the need for new or expanded park facilities and there would be no impact to park facilities. The Proposed Project would have a less-than-significant impact on open space, parks, and recreation, and no mitigation measures are required.

Proposed Project Mitigation Measure

4.15-1 The project applicant shall be required to pay an in-lieu park fee to the City of Menifee for park deficiency prior to the issuance of building permits.

4.1.16 Fire Protection

Approved Project Impact Analysis

The Certified EIR determined that the development of 486 housing units proposed by the Approved Project would place additional demand on the County Fire Department and cumulatively impact the Department's ability to service the planned population. Because an existing fire station is already located within 3 miles of the site (Station 68), the Fire Department would be able to respond with a full first alarm assignment operating on the scene of a fire within 15 minutes of dispatch upon completion of roadway improvements proposed by the Approved Project (Urban-Category III level of service). With buildout of the Approved Project, however, a significant cumulative impact on fire services was identified due to the additional demand being placed on fire protection services in the project area. The Approved Project would comply with the provisions in the Uniform Fire Code and Riverside County Code, Chapter 8.32, Fire Protection Regulations, and implement Mitigation Measures 4.16-1 and 4.16-5, which reduced cumulative impacts to below a level of significance.

Approved Project Mitigation Measures

4.16-1 In accordance with Riverside County Subdivision Ordinance 460, fire flows shall have 1000 gallons per minute at 20 psi residual pressure.

4.16-2 All water mains and fire hydrants shall be constructed in accordance with Ordinance 460. Hydrant spacing at each intersection shall be no more than 330 feet apart.

4.16-3 Disclosures of potentially damaging wildfires in the area must be disclosed to future homebuyers by the seller as part of the buyer disclosure statements prior to purchase as required by the California Civil Code.

4.16-4 Prior to issuance of the grading permits, a fire protection/vegetation management plan shall be prepared and submitted to the Fire Department for review and approval.

4.16-5 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including fire protection facilities.

Proposed Project Impact Analysis

As described in Section 3.3, Phase 4 of the residential development would result in approximately 98 additional dwelling units for a total of 259 dwelling units, compared to 161 units proposed by the Approved Project. This would increase the overall number of dwelling units from 486 to 571 (including Phases 1 to 3). The City contracts with Riverside County Fire to provide fire services in the City. Similar to the Approved Project, the Proposed Project is within 3 miles of an existing fire station (Station 68 at 26020 Wickerd Road), which would allow the Fire Department to respond with a full first alarm assignment operating on the scene of a fire within 15 minutes of dispatch after completion of roadway improvements proposed by the Proposed Project (Urban-Category III level of service). However, buildout of the Proposed Project would still have a significant cumulative impact on fire services due to the additional demand on fire protection services in the project area. The Proposed Project would comply with the provisions in the International Fire Code and Riverside County Code Chapter 8.32, Fire Protection Regulations, which would reduce cumulative impacts, and implementation of Mitigation Measures 4.16-1 through 4.16-5 would still be required to reduce the impact of the Proposed Project, including the additional 98 residential units, on fire protection to less-than-significant levels.

Proposed Project Mitigation Measures

The Approved Project mitigation measures are applicable to the Proposed Project as originally adopted.

4.16-1 In accordance with Riverside County Subdivision Ordinance 460, fire flows shall have 1,000 gallons per minute at 20 psi residual pressure.

4.16-2 All water mains and fire hydrants shall be constructed in accordance with Ordinance 460. Hydrants at each intersection shall be no more than 330 feet apart.

4.16-3 Disclosures of potentially damaging wildfires in the area must be disclosed to future homebuyers by the seller as part of the buyer disclosure statements prior to purchase as required by the California Civil Code.

4.16-4 Prior to issuance of the grading permits, a fire protection/vegetation management plan shall be prepared and submitted to the Fire Department for review and approval.

4.16-5 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 17-232), which requires a fee payment that the County applies to the funding of public facilities, including fire protection facilities.

4.1.17 Sheriff (Police) Protection

Approved Project Impact Analysis

The Certified EIR determined that the Approved Project would contribute incrementally to population growth in the region, which could result in an incremental increase in criminal activity such as burglaries, thefts, auto thefts, vandalism, etc. According to the Riverside Sheriff's Department, there is no direct correlation between population growth, the number of crimes committed, and the number of Sheriff's Department personnel needed to respond to these increases. As the population and use of an area increase, however, additional financing of equipment and manpower are required to meet the increased demand. The Approved Project increased the demand for services beyond the capabilities of the Riverside Sheriff's Department. To obtain a desirable level of service, using the criterion of one deputy per 1,000 residents, ultimate development of the Approved Project could generate a need for one additional deputy in order to provide adequate protection to the TTM 31194 site. Staff necessary to support the additional deputy would include an appropriate level of civilian, investigation, and supervisory personnel. Development of the Approved Project required implementation of Mitigation Measures 4.17-1 and 4.17-2 to ensure that potential impacts were less-than-significant.

Approved Project Mitigation Measures

4.17-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including sheriff protection facilities.

4.17-2 The project applicant shall inform the Crime Prevention Unit of the Sheriff's Department of all new homeowners associations. These associations may be used as the foundation for establishing Neighborhood Watch Programs.

Proposed Project Impact Analysis

As described in Section 3.3, Phase 4 of the residential development would result in approximately 98 additional dwelling units and a total of 259 dwelling units, compared to 161 units proposed by the Approved Project. This would increase the overall number of proposed dwelling units from 486 to 571 (including Phases 1 to 3). In accordance with the City of Menifee General Plan's future buildout projections, the Proposed Project would be anticipated to result in a population of approximately 803 residents in the 259 dwelling units, and the TTM 31194 site (including Phases 1 to 3) is anticipated to result in a population of approximately 1,770 residents in the 571 proposed dwelling units. Development of the Proposed Project could contribute incrementally to population growth in the region, which could result in an incremental increase in criminal activity such as burglaries, thefts, auto thefts, vandalism, etc.; thus, the Proposed Project would result in an increase in the

demand for services beyond the current capabilities of the City of Menifee's Police Department. Development of the Proposed Project would require implementation of Mitigation Measures 4.17-1 and 4.17-2, which would fee allow more police staff and infrastructure, and neighborhood watch, reducing demand on police. Therefore, implementation of the mitigation measures would ensure that potential project impacts would be less-than-significant.

Proposed Project Mitigation Measures

4.17-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the ~~County~~ City's Development Impact Fees (DIF) Ordinance (Ord. ~~No. 659~~ No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including ~~sheriff~~ police protection facilities.

4.17-2 The project applicant shall inform the ~~Crime Prevention Unit of the Sheriff's Department~~ Problem Oriented Policing (POP) Unit of the City of Menifee's Police Department of all new homeowners associations. These associations may be used as the foundation for establishing Neighborhood Watch Programs.

4.1.18 Solid Waste

Approved Project Impact Analysis

The Certified EIR determined that the Approved Project would increase the amount of solid waste generated in the area, shortening the life span of the affected landfills and increasing the demand on waste haulers. The Approved Project included a total of 486 dwelling units and would generate approximately 0.41 tons of solid waste per capita per year—that is, approximately 599.83 tons per year or 1.6 tons per day. Implementation of a waste disposal strategy for the Approved Project could assist Riverside County in achieving the mandated goals of the Integrated Waste Management Act by developing feasible waste programs that encourage source reduction, recycling, and composting.

The County Solid Waste Management Plan includes programs to reduce the quantities of waste sent to landfills. These programs include source reduction, separation of recoverables, composting, and high technology resources recovery. The implementation of these programs reduced the increase in solid waste generation associated with new development, which would aid in extending the life of affected disposal sites. With project participation in a recycling program, direct impacts to landfill capacity would not be significant.

Approved Project Mitigation Measures

4.18-1 The refuse hauler for the TTM 31194 site shall be advised of the efforts the developer will be pursuing relating to recycling and waste reduction (i.e., curbside recycling, in accordance with County Resolution No. 90-688. The use of such programs would be encouraged by the developer through information (e.g., location, materials accepted, etc.) provided in sales literature.

4.18-2 The project applicant shall participate in established County-wide programs to reduce solid waste generation.

4. CEQA Analysis

4.18-3 The master Homeowners' Association and/or landscape maintenance district or association shall either mulch (shred and leave on landscaped areas), compost on-site, or separate from other types of waste to send to a composting facility within the local area, green waste (i.e., trimmings from grass, shrubs, or trees) from common project landscaped areas and the community park.

4.18-4 The project developer shall pursue and implement any available and feasible source reduction programs for the disposal of construction materials to the satisfaction of the Riverside County Waste Management Department.

4.18-5 The project applicant shall comply with the State Model Ordinance, which requires adequate areas for the collection and loading of recyclable materials to be provided within detached, single family residential areas where solid waste is collected and loaded in a location which serves five or more units.

Proposed Project Impact Analysis

During construction of the Proposed Project, a waste recycling plan (WRP) would be submitted to the City's Public Works/Engineering Department for review and approval. The WRP would include the waste materials (concrete, asphalt, wood, etc.) that would be generated by the construction activity associated with this development and the projected amounts of each material; the measures/methods that would be taken to recycle, reuse, and/or reduce the amount of waste materials generated; the facilities and/or haulers that would be utilized; and the targeted recycling or reduction rate. During construction of the Proposed Project, the Project Site would have a minimum of two bins—one for waste disposal and the other for the recycling construction and demolition (C&D) materials. Additional bins are encouraged for further source separation of C&D recyclable materials.

As described in Section 3.23 Phase 4 of the residential development would result in a total of 259 dwelling units and is anticipated to result in a population of approximately 803 residents. This would increase the overall number of proposed dwelling units to 571 (including Phases 1 to 3), which would result in an estimated overall population of approximately 1,770 residents. The Proposed Project would generate approximately 0.41 ton of solid waste per capita per year, resulting in approximately 239.44 tons per year or 0.66 tons per day for Phase 4 of the residential development. Additionally, the entire TTM 31194 site would result in approximately 742.1 tons per year or 2.03 tons per day, compared to 599.83 tons per year or 1.6 tons per day for the Approved Project.

Solid waste from the Proposed Project would be collected by Waste Management, Inc. (WMI), which provides service to the City of Menifee. Residences within the Proposed Project would be provided three bins—one for trash, one for green waste, and one for recyclable materials. Solid waste from Menifee is disposed of in two landfills, El Sobrante Landfill in unincorporated Riverside County south of the City of Corona, and Badlands Sanitary Landfill near the City of Moreno Valley.

Proposed Project Mitigation Measures

The mitigation measures from the Certified EIR ensure that the Proposed Project would have less-than-significant impacts on solid waste; some have been revised to reflect the change in jurisdictions.

4.18-1 The refuse hauler for the Project Site shall be advised of the efforts the developer will be pursuing relating to recycling and waste reduction (e.g., curbside recycling) in accordance with ~~County Resolution No. 90-688~~ Chapter 6.30, Solid Waste Disposal and Organic Waste Diversion, of the Menifee Municipal Code. The use of such programs would be encouraged by the developer through information (location, materials accepted, etc.) provided in sales literature.

4.18-2 The project applicant shall participate in established citywide programs to reduce solid waste generation.

4.18-3 The master Homeowners' Association and/or landscape maintenance district or association shall mulch (shred and leave on landscaped areas), compost on-site, or separate from other types of waste to send to a composting facility within the local area, green waste (i.e., trimmings from grass, shrubs, or trees) from common landscaped areas and the community park.

4.18-4 The project developer shall pursue and implement any available and feasible source reduction programs for the disposal of construction materials to the satisfaction of the ~~Riverside County Waste Management Department~~ City of Menifee's Solid Waste and Recycling Department.

4.18-5 The project applicant shall comply with the State Model Ordinance, which requires adequate areas for the collection and loading of recyclable materials to be provided within detached, single family residential areas where solid waste is collected and loaded in a location which serves five or more units.

4.1.19 Water and Wastewater Services

Approved Project Impact Analysis

The Certified EIR determined that the water system for the Approved Project would be connected to the EMWD water system at the intersection of Garbani Road and Haun Road with an additional water main at the intersection of Wickerd Road and Haun Road. The pressure available from the existing water system was adequate to provide residual pressures greater than 20 psi during 1,500 gpm fire flows, as required by EMWD. The minimum residual pressure experienced for the worst-case fire flow was 30.2 psi for the Wickerd Road connection. The proposed water system provided greater than 40 psi for all lots during a peak-hour domestic demand event. The minimum pressure experienced was 41.8 psi.

Sewer lines would be installed on- and off-site to connect to an existing line in Bradley Road. Off-site connections would be installed to the north through TTM No. 30142 and in Evans Road, Carson Avenue,

4. CEQA Analysis

Murphy Lane, Holland Road, and through private property to a connection point at Bradley Road. Off-site sewer connections to the north were the responsibility of TTM No. 30142.

The Approved Project had a calculated average wastewater discharge of 178,605 gallons per day. This was based on an average daily flow of 367.5 gallons per day (gpd) per dwelling unit

Approved Project Mitigation Measures

The Approved Project provided the water and wastewater facilities necessary to serve the project. It was required to be in compliance with the basin plan of the Santa Ana RWQCB. In addition, the project was required to obtain updated "will serve" letters from the EMWD before subdivision or use permit implementation. The Approved Project was conditioned to construct an on-site recycled water system and associated off-site recycled water facilities that provided a nonpotable water source for irrigating common landscaped areas such as green-belts and open space areas. Therefore, the Approved Project did not result in any significant impacts to water or wastewater facilities, and no mitigation measures were required beyond the standard conditions imposed by the County of Riverside.

Proposed Project Impact Analysis

Similar to the Approved Project, the Proposed Project would be connected to the EMWD water system. The pressure available from the existing water system is adequate to provide residual pressures greater than 20 psi during 1,500 gpm fire flows, as required by EMWD. The minimum residual pressure experienced for the worst-case fire flow was 30.2 psi for the Wickerd Road connection. The proposed water system provides greater than 40 psi for all lots during a peak-hour domestic demand event. The minimum pressure experienced was 41.8 psi. Sewer lines for the Proposed Project would be installed on- and off-site to connect to an existing. The Proposed Project would have a calculated average wastewater discharge of 95,183 gallons per day based on an average daily flow of 367.5 gallons per day (gpd) per dwelling unit; and the TTM 31194 project would have a calculated average wastewater discharge of 209,844 gallons per day.

The Proposed project provides the water and wastewater facilities necessary to serve the project. It is required to be in compliance with the basin plan of the Santa Ana RWQCB. In addition, the Proposed Project required to obtain updated "will serve" letters from the EMWD before subdivision or use permit implementation. The Proposed Project is conditioned to construct an on-site recycled water system and associated off-site recycled water facilities that provided a nonpotable water source for irrigating common landscaped areas such as green-belts and open space areas. Therefore, the Proposed Project will not result in any significant impacts to water or wastewater facilities, and no mitigation measures were required beyond the standard conditions imposed by the City and EMWD.

Proposed Project Mitigation Measures

No new mitigation measures would be required for the Proposed Project.

4.1.20 Schools

Approved Project Impact Analysis

The Certified EIR determined that implementation of the Approved Project and construction of 486 single-family residential dwelling units would increase the demand on existing educational facilities and services by generating additional students to be served by the Menifee Unified School District (MUSD) and Perris Union High School District (PUHSD). After applying student generation rates supplied by these school districts, implementation of the Approved Project generated approximately 187 elementary school students, 102 middle school students, and 122 high school students.

According to enrollment numbers supplied by MUSD and PUHSD, the Approved Project would generate students in excess of available capacity at the elementary and middle school levels. Elementary school students would attend Menifee Elementary School which was operating at capacity. Middle school students would attend Menifee Valley Middle School, which was operating at 33 students below capacity.

Two new elementary schools and one new high school were planned in the vicinity of the Approved Project. The MUSD and PUHSD were relieving overcrowding through the use of portable classrooms. The addition of 187 elementary school students and 102 middle school students to over-capacity schools was regarded as a significant cumulative impact. The addition of 122 students to Paloma Valley High School would not result in enrollment over the school's recommended capacity, but nonetheless was regarded as a significant cumulative impact as urbanization continued in the district.

Approved Project Mitigation Measure

4.20-1 Prior to the issuance of each residential building permit(s), school fees shall be paid in accordance with the requirements of the State of California (Senate Bill 50) or the applicant shall enter into a mitigation agreement with the Menifee Union School District and the Perris Union High School District.

Proposed Project Impact Analysis

As described in Section 33, Phase 4 of the residential development would result in a total of 259 dwelling units and a population of approximately 803 residents. This would increase the overall dwelling units to 571 (including Phases 1 to 3) and the overall population to approximately 1,770 residents. The nearest public schools to the Project Site include Oak Meadows Elementary School and Menifee Valley Middle School, which are part of the MUSD, and Paloma Valley High School, which is part of PUHSD (see Table 4, *Student Enrollment and Anticipated Student Generation*).

4. CEQA Analysis

Table 4. Student Enrollment and Anticipated Student Generation

School	Grades Served	Existing Enrollment	Student Generation Rate	Dwelling Units		Number of Students	
				Proposed Project (Phase 4 only)	TTM 31194 Site (including Phases 1–3)	Proposed Project (Phase 4 only)	TTM 31194 Site (including Phases 1–3)
Menifee Union School District							
Oak Meadows Elementary School	K-5	815	0.3119	259	571	81	178
Menifee Valley Middle School	6-8	1,239	0.1525	259	571	39	87
Perris Union High School District							
Paloma Valley High School	9-12	2,919	0.1317	259	571	34	75

Source: California Department of Education 2022; City of Menifee 2013.

According to the City's General Plan EIR, the estimated increase in student generation for single-family residences would be 0.3119 student/unit for elementary school students, 0.1525 student/unit for middle school students, and 0.1317 student/unit for high school students. Thus, an increase to 259 dwelling units for the Proposed Project would result in approximately 81 elementary school students, 39 middle school students, and 34 high school students. The overall TTM 31194 site (including Phases 1 to 3) would have a total of 571 dwelling units and result in approximately 178 elementary school students, 87 middle school students, and 75 high school students. The proposed project would be required to pay school impact fees, pursuant to SB 50, to reduce impacts to the school system. The school districts collect these fees at the time of issuance of building permits. The State legislature has found that funding programs established by SB 50 constitutes "full and complete mitigation of the impacts" on the provision of adequate school facilities (Government Code Section 65995(h)). SB 50 sets forth a state school facilities construction program that includes restrictions on a local jurisdiction's ability to demand mitigation of a project's impacts on school facilities in excess of fees in Education Code 17620. Therefore, the Proposed Project would result in less-than-significant impacts with mitigation measures, as described below.

Proposed Project Mitigation Measures

The Approved Project mitigation measure is applicable to the Proposed Project as originally adopted and will reduce the impact of the Proposed Project on school to less-than-significant levels.

4.20-1 Prior to the issuance of each residential building permit(s), school fees shall be paid in accordance with the requirements of the State of California (Senate Bill 50) or the applicant shall enter into a mitigation agreement with the Menifee Union School District and the Perris Union High School District.

4.1.21 Libraries

Approved Project Impact Analysis

The Certified EIR determined that development of the Approved Project created an additional demand for library facilities and services by generating 1,463 residents (486 homes x 3.01). Although use of the internet had resulted in less demand on library services nationwide, the County continued to maintain its standards for book titles and library square footage. To attain the County's minimum level of service standard of 1.2 titles per capita, the project-generated population required an additional 1,756 book titles. To attain the County of Riverside standard of 0.5 square foot of library space per capita, the project created the demand for an additional 732 square feet of library space. The Riverside County Public Library determined that no additional facilities were required.

Approved Project Mitigation Measures

4.21-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including library facilities.

Proposed Project Impact Analysis

The Proposed Project would generate approximately 803 new residents on the Project Site and approximately 1,770 new residents over the entire project (including Phases 1 to 3). Therefore, it would also create an additional demand for library facilities and services. The City of Menifee is served by the Riverside County Public Library system. The Riverside County Public Libraries include three libraries that service the city and are within nine miles of the Project Site—Paloma Valley Library, Sun City Library, and Romoland Library. To attain the County's minimum level of service standard of 1.2 titles per capita, the Project-generated population would require an additional 964 book titles for the Proposed Project and an additional 2,172 titles for the TTM 31194 project (including Phases 1 to 3). To attain the County of Riverside standard of 0.5 square foot of library space per capita, the Project would need approximately 402 square feet of additional library space for the Proposed Project and approximately 905 square feet for the entire Project (including Phases 1 to 3).

The City's General Plan EIR identifies that the existing facilities are not adequate to serve the current population in Menifee and would not be adequate to serve the Proposed Project. However, additional DIFs per City Resolution No. 17-232would be required for the Proposed Project and would contribute to the financing of additional library space and services in the city. With the DIFs, the addition of Project Site residents would not substantially diminish level of service or performance objectives of the library system and will reduce the impact of the Proposed Project on library services to less-than-significant levels.

Proposed Project Mitigation Measures

4.21-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City Development Impact Fee (DIF)(Resolution No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including library facilities.

4. CEQA Analysis

4.1.22 Healthcare Services

Approved Project Impact Analysis

The Certified EIR determined that adverse impacts to health services were not anticipated as a result of implementation of Approved Project. The increase in population of 1,463 people by the Approved Project (County Ordinance No. 460, Section 10.35) would generate an increased demand for medical services, and therefore result in a significant cumulative impact to health care services. Health care is a regional issue, which generally responds to the current demand. The Certified EIR found that the payment of a County Development Impact Fee pursuant to Ordinance No. 659 to fund public facilities would reduce the impact of the Approved Project on healthcare services to less-than-significant levels.

Approved Project Mitigation Measures

4.22-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including public health facilities.

Proposed Project Impact Analysis

Similar to the implementation of the Approved Project, development of the Proposed Project would increase population in the Project area, thus increasing demand for medical services and resulting in a significant cumulative impact to health care services. However, additional DIFs per City Resolution No. 17-232would be required for the Proposed Project and would contribute to the financing of additional healthcare services in the city. With the DIFs, the addition of Project Site residents would not substantially diminish level of service or performance objectives of existing healthcare facilities and will reduce the impact of the Proposed Project on healthcare services to less-than-significant levels. .Therefore, implementation of Mitigation Measure 4.22-1 would be applicable to the Proposed Project and would ensure that potential project impacts regarding healthcare services are reduced.

Proposed Project Mitigation Measures

4.22-1 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City Development Impact Fee (DIF)(Resolution No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including public health facilities.

4.1.23 Energy Resources

Approved Project Impact Analysis

The Certified EIR determined that implementation of the Approved Project would result in the conversion of the site from agricultural and vacant land uses to a residential community, which would increase the demand on available sources of energy. Specifically, the Approved Project increased consumption of energy for motor vehicle movement, space and water heating, lighting, cooking, refrigeration and air conditioning, operation of

construction equipment, use of miscellaneous home appliances, and energy required to produce the construction materials and all other material aspects of the Approved Project. However, the Approved Project was not regarded as an energy-intensive land use; thus, energy consumption levels were not expected to exceed typical requirements for similar urban development. Also, service providers indicated an ability to serve the Approved Project without it significantly affecting their energy resources.

On-site natural gas demand for the Approved Project was estimated at 38,870,280 therms per year based on 79,980 therms per year per dwelling unit. On-site electricity was estimated at 2,956,824 kilowatt-hours per year (kWh/yr.) based on 6,081 kWh/yr. per dwelling unit. The Approved Project would consume energy and have an impact on available energy resources; however, due to long range planning by energy purveyors, the demands related to the Approved Project could be accommodated and impacts were not significant.

Approved Project Mitigation Measures

Impacts were not significant, so mitigation was not required. As a standard condition of approval, the project was required to comply with Titles 20 and 24 of the California Code of Regulations. Title 24, Section 2-5307(b) is the California Energy Conservation Standard for New Buildings, which prohibits the installation of fixtures unless the manufacturer has certified their compliance with flow rate standards to the California Energy Commission (CEC). Title 24, Sections 2-5452(i) and (j) address pipe installation requirements that can reduce water used before it reaches equipment or fixtures. Title 20, Sections 1604(f) and 1606(b), are Appliance Efficiency Standards that set the maximum flow rate of all plumbing fixtures and prohibit the sale of nonconforming fixtures. The Approved Project was also required to adhere to State codes regarding energy conservation.

Proposed Project Impact Analysis

The Proposed Project would be constructed within the same footprint at the Approved Project, so the Proposed Project would also result in the conversion of the TTM 31194 site from agricultural uses and vacant land to a residential community, resulting in an increased demand on existing sources of energy.

On-site natural gas demand for the Proposed Project is estimated at 64,223,940 therms per year based on 79,980 therms per year per dwelling unit. On-site electricity for the Proposed Project is estimated at 3,472,251 kWh/yr. based on 6,081 kWh/yr. per dwelling unit. Similar to the Approved Project, the Proposed Project would consume energy and have an impact on available energy resources; however, due to long range planning by energy purveyors, the demands of the Proposed Project can be accommodated, and impacts are not significant.

Proposed Project Mitigation Measures

Impacts would not be significant, so mitigation is not required. As a standard condition of approval, the Proposed Project would be required to comply with Titles 20 and 24 of the California Code of Regulations. Title 24, California Code of Regulations Section 2-5307(b) is the California Energy Conservation Standard for New Buildings which prohibits the installation of fixtures unless the manufacturer has certified to the California Energy Commission (CEC) compliance with the flow rate standards. Title 24, California Code of Regulations Sections 2-5452(i) and (j) address pipe installation requirements which can reduce water used before hot water

reaches equipment or fixtures. Title 20, California Code of Regulations Sections 1604(f) and 1606(b) are Appliance Efficiency Standards that set the maximum flow rate of all plumbing fixtures and prohibit the sale of non-conforming fixtures. The Proposed Project would also be required to adhere to State codes regarding energy conservation.

4.1.24 Utilities

Approved Project Impact Analysis

Electricity

The Certified EIR determined that the Approved Project would create a demand for electricity and require the extension of electrical facilities to serve project development. New electrical service would be provided by Southern California Edison (SCE), which would install the required electrical transmission lines.

Buildout of the Approved Project was estimated to require approximately 2,955,366 kilowatt hours per year (kWh/yr.). SCE determined that the proposed project would not adversely affect electrical service or demand. The Approved Project was required to implement all relevant energy conservation measures as outlined in Title 24 of the California Code of Regulations.

Natural Gas

The Approved Project generated a demand for natural gas and required the extension of natural gas lines into the TTM 31194 site. The primary use of natural gas by the project was to produce space heating, water heating, and other miscellaneous heating and air conditioning uses.

The Approved Project was estimated to consume approximately 38,870,280 cubic feet per year of natural gas at buildout. Southern California Gas Company (SCG) indicated that the Approved Project would not result in significant adverse natural gas facilities in the area.

Telephone

Telephone service for the Approved Project would be provided by Verizon communications, which indicated that it had the ability to provide the TTM 31194 site with telephone service. Significant impacts associated with the provision of telephone service would not occur.

Approved Project Mitigation Measures

No mitigation measures were required for the Approved Project regarding utilities.

Proposed Project Impact Analysis

Electricity

Southern California Edison (SCE) provides electricity to the Project Site. The Proposed Project would connect to existing facilities in the public right-of-way (ROW). The Proposed project would not require new or expanded electric power facilities other than connections to the existing electricity grid.

Buildout of the Proposed Project would be estimated to require approximately 1,574,979 kilowatt hours per year (kWh/yr.). Since the anticipated kWh/yr. for the Proposed Project would be below the required kWh/yr. analyzed for the Approved Project, it is assumed that the Proposed Project would not adversely affect electrical service or demand. The Proposed Project would be required to implement all relevant energy conservation measures as outlined in Title 24 of the California Code of Regulations.

Natural Gas

Southern California Gas (SoCalGas) would provide natural gas service to the Project Site. The availability of natural gas service is based on present gas supply and regulatory policies. As a public utility, SoCalGas is under the auspices of the California Public Utilities Commission and federal regulatory agencies. Should these agencies take any action that affects gas supply or the conditions under which service is available, gas service would be provided in accordance with revised conditions. Development of the Proposed Project would comply with regulations and standards pertaining to natural gas and would connect to the existing natural gas infrastructure.

The Proposed Project would be estimated to consume approximately 64,223,940 cubic feet per year of natural gas at buildout. It is assumed that the Proposed Project would not result in significant adverse natural gas facilities in the area.

Telephone

Frontier Communications would provide telecommunication facilities to the Proposed Project, including telephone, cable television, and high-speed internet services. Therefore, the area is adequately served by telecommunications facilities. The Proposed Project would include on-site connections to off-site telecommunication services and facilities in the immediate area. Facilities and infrastructure for telecommunication are adequate to serve the needs of the Proposed Project. The Proposed Project would not result in or require the construction of new or expanded telecommunication facilities.

Proposed Project Mitigation Measures

No mitigation measures would be required for the Proposed Project regarding utilities.

4.1.25 Disaster Preparedness

Approved and Proposed Project Impact Analysis

Fire Hazards

See Section 4.1.16, *Fire Protection*, of this EIR Addendum.

Seismic Hazards

See Section 4.1.7, *Geology and Slope Stability*, of this EIR Addendum.

Slope and Soil Instability Hazards

See Section 4.1.8, *Soils, Slopes, and Erosion Potential*, of this EIR Addendum.

Flood and Inundation Hazards

See Section 4.1.5, *Hydrology, Flooding, and Drainage*, of this EIR Addendum

4.2 FINDINGS

The discussion in this Addendum evaluates the Proposed Project for significant impacts pursuant to CEQA. As a result, and for the reasons explained in this Addendum, the Proposed Project would not cause any new significant environmental impacts or substantially increase the severity of significant environmental impacts disclosed in the Certified EIR. There are no mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative, or mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. Thus, the Proposed Project does not trigger any of the conditions in CEQA Guidelines Section 15162 requiring the preparation of a subsequent EIR, and the appropriate environmental document as authorized by CEQA Guidelines Section 15164(b) is an addendum.

The following identifies the standards in Section 15162 of the CEQA Guidelines as they relate to the Proposed Project. When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

1. **No substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects**

   As discussed previously, the Proposed Project would have similar environmental impacts to those discussed in the Certified EIR for the Approved Project. The Proposed Project would increase the number of residential units in the Project Site; however, the Proposed Project would be located within the same footprint of the Approved Project and thus would not be anticipated to result in any additional or substantially increased impacts, as shown in Section 4.1, *Environmental Analysis*. Therefore, the Proposed Project would be anticipated to make efficient use of land when compared to the physical environmental impacts that were evaluated in the Certified EIR.

   The Proposed Project would continue to comply with all applicable Federal, State, and local laws, and the Proposed Project would be consistent with the City's General Plan. Therefore, no substantial changes are proposed that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

2. The project will have one or more significant effects not discussed in the previous EIR.

Since certification of the EIR, the City incorporated and the project approvals became the responsibility of the City. The City has been proceeding using the adopted materials, and there have been no other changes in the Project Site or the surrounding area with regard to circumstances in which the Approved Project was undertaken. As described previously, the impacts of the Proposed Project would be less than or equal to those analyzed in the Certified EIR. Significant air quality and circulation and traffic impacts would remain similar to what is identified in the Certified EIR with the implementation of the Proposed Project. Therefore, no major revisions to the Certified EIR would be required due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

3. Significant effects previously examined will be substantially more severe than shown in the previous EIR.

The Proposed Project would have the same significant impacts as disclosed in the Certified EIR. The Certified EIR identified significant impacts for air quality and circulation and traffic. Implementation of the Proposed Project would not result in new significant environmental impacts. Although the dwelling units for Phase 4 of the Proposed Project would increase, the environmental impacts under the Proposed Project would not be substantially more severe than those analyzed in the Certified EIR. Therefore, no impacts of the Proposed Project would be substantially more severe than those analyzed in the Certified EIR.

4. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative.

As shown in Section 4.1, *Environmental Analysis*, the Proposed Project would not have any new substantial impacts when compared to the Approved Project, and would not require the implementation of any mitigation measures found not to be feasible. Some of the previous mitigation measures discussed in the Certified EIR would continue to be applicable to the Proposed Project to reduce potential environmental impacts to less-than-significant, while other mitigation measures have been revised to for the Proposed Project, and would comply with regulations set forth by the City of Menifee. Therefore, the Proposed Project would not result in new significant environmental impacts; thus, there is no need for mitigation measures found by the Certified EIR not to be feasible.

5. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The Proposed Project would have environmental impacts that would not be substantially more severe than those of the Approved Project. As stated previously, no additional impacts or substantially more severe impacts would occur as a result of the Proposed Project. No new mitigation measures or alternatives which are considerably different from those analyzed in the Certified EIR would be required for the Proposed

4. CEQA Analysis

Project. Although some of the previous mitigation measures discussed in the Certified EIR would continue to be applicable to the Proposed Project to reduce potential environmental impacts to less-than-significant, other mitigation measures have been revised, and would comply with regulations set forth by the City of Menifee. Therefore, there are no new mitigation measures or alternatives required for the Proposed Project, and potential impacts would not be substantially more severe that those of the Approved Project. The MMRP adopted for the EIR in 2007 has been updated for the Proposed Project (see Appendix B).

Appendix A. 2007 Certified EIR – Mitigation Monitoring and Reporting Program

Appendix A. 2007 Certified EIR - Mitigation Monitoring and Reporting Program

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.1 LAND USE CONSISTENCY				
The proposed project would be consistent with applicable policies from the Riverside County General Plan, the Sun City/Menifee Valley Area Plan, the MSHCP, the CETAP, SCAG, and the SCAQMD AQMP.	Not significant.	Mitigation is not required.	None	None
4.2 AESTHETICS, VISUAL QUALITY, LIGHT AND GLARE				
At build-out of the proposed project, views of the site from surrounding areas would change from predominately vacant land to medium density residential and open space land uses. This change is not regarded as adverse. The site's most prominent visual characteristic, consisting of a natural hillside occurring in the northeast portion of the project site, would be preserved as natural open space The proposed project site is located within the Mt. Palomar Observatory Special Lighting Area. Lighting from the proposed project could adversely affect the Palomar Observatory, resulting in a potentially significant impact.	Reduced to below a level of significance.	**4.2-1** The project shall comply with the applicable provisions of County Ordinance No. 655, which was established to regulate the use of certain light fixtures, and requires evidence of compliance with the lighting standards discussed in Section 4.2. All outdoor lighting systems shall comply with Ordinance No 655.	Riverside County Planning Department; Riverside County Building and Safety Department	Prior to the issuance of building permits.
4.3 BIOLOGICAL RESOURCES				
Vegetation Communities The project site is not located in the MSHCP Criteria Area. On-site grading and development would remove or disturb approximately 152.1 acres of agricultural, disturbed or ruderal habitat, 2.1 acres of northern mixed chaparral, 18.3 acres of Riversidean sage scrub (including a 100' fuel modification zone along the development's northeastern edge), 2.4 acres of disturbed Riversidean sage scrub and 0.8 acres of southern arroyo willow/mulefat scrub. Of the 2.0 acres that will be disturbed off-site, impacts would occur to 1.97 acres of agricultural, disturbed, or ruderal habitat, 0.02 acres of southern arroyo willow/mulefat scrub and 0.01 acre of Riversidean sage scrub.	Reduced to below a level of significance.	**Vegetation Communities** **4.3-1** TTM No. 31194, Lot #503 (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.	Riverside County Planning Department	Prior to the issuance of clearing, grubbing, or grading permits.
Sensitive Plant Species No sensitive plant species were observed on-site. The site is not located in the MSHCP Criteria Area. Additionally, the proposed project site is not identified in an area required to be surveyed pursuant to the MSHCP's Protection of Narrow Endemic Plant Species guidelines and the MSHCP's Additional Survey Needs and Procedures. Therefore, focused botanical surveys are not required for the project site, and any impacts to sensitive plant species, if	Not significant.	Mitigation is not required.	Not applicable.	Not applicable.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
present, are not regarded as significant. The project applicant will be required to comply with Riverside County Ordinance No. 4.62.070 which requires payment of a MSHCP mitigation fee order to assist in providing revenue to acquire and conserve lands necessary to implement the MSHCP.				
Sensitive Wildlife Species The project site is located outside of the MSHCP Criteria Area; however, in accordance with MSHCP's Additional Survey Needs and Procedures, burrowing owl surveys are required. Although burrowing owl was not observed on the site, it does have the potential to move onto the site due to its migratory nature. Potential impacts to burrowing owl is considered significant.	Reduced to below a level of significance.	**Sensitive Wildlife Species** **4.3-2** Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the County of Riverside. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix E which states: a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols. b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.	Riverside County Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
		4.3-3 Prior to issuance of grading permits, the applicant shall be required to pay Local Development Mitigation Fees (per County Ordinance No. 4.62.070) for implementation of the MSHCP.	Riverside County Planning Department	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.3-4 Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the projects potentially significant impacts to the Stephens' kangaroo rat.	Riverside County Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
		4.3-5 If construction activities will occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to young. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged. a. The white-tailed kite is "fully-protected" by the California Department of Fish and Game. If this species is documented as nesting on the project site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the CDFG.	Riverside County Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
Jurisdictional Wetlands and Waters Jurisdictional areas on the project site include 62,384.3 square feet 1.43 ac) of state streambeds, and 37,667.9 square feet 0.67 ac) of federal jurisdictional drainages. Implementation of TTM No. 31194 would result in impacts to 34,512.6 square feet (0.79 ac) of state streambeds, of which 1,316 square feet (0.03 ac) are state wetlands and 18,748.6 square feet (0.43 ac) are federal jurisdictional drainages. Impacts to these jurisdictional wetlands and waters is considered significant.	Reduced to below a level of significance.	**Jurisdictional Wetlands and Waters** **4.3-6** Prior to the issuance of grading permits, the applicant shall submit documentation to the County of Riverside verifying that the necessary permits required by the U.S. Army Corps of Engineers (ACOE), California Department of Fish and Game (CDFG) and Regional Water Quality Control Board (RWQCB) have been obtained. The ACOE has a no net loss policy which requires that any unavoidable	Riverside County Planning Department. RCA, ACOE, CDFG	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures or similar measures as approved by the ACOE, CDFG, and RWQCB would reduce impacts to ACOE and CDFG jurisdictional areas to a level less than significant: (a) On or off-site replacement of ACOE jurisdictional waters and wetlands at a ratio no less than 1:1; (b) On or off-site replacement of CDFG jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or (c) Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).		
		4.3-7 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.	Riverside County Environmental Programs Department	Prior to Final Map approval and issuance of building and occupancy permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.3-8 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the County prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.	Riverside County Planning Department	Prior to issuance of building permits.
		4.3-9 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area". The County of Riverside Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.	Riverside County Planning Department	Prior to issuance of building permits.
4.4 ARCHAEOLOGICAL AND PALEONTOLOGICAL RESOURCES				
Archaeological Resources There are no historic or prehistoric sites identified on the proposed project site. However, archaeologically sensitive sites have been identified within the project vicinity, and the potential for	Reduced to below a level of significance.	**Archaeological Resources:** **4.4-1** Prior to any clearing, grubbing and/or earth moving activities, a qualified archaeologist shall be retained by the developer. land divider for consultation and comment on the proposed grading with respect to	Riverside County Planning Department; Project Archaeologist	Prior to the issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
archaeologically sensitive sites occurring on the proposed project site exists. The potential for disturbance to undiscovered		potential impacts to sub-surface cultural resources. Should the archaeologist, after The potential for discovery of archaeological resources on the site has been indicated as medium to high; therefore,		
		4.4-2 (A) Prior to issuance of a grading permit, the archaeologist shall develop a mitigation plan and a discovery clause/treatment plan, which shall include mitigation monitoring to be implemented during earthmoving on the project site. The treatment plan shall be developed in consultation with the culturally affiliated Luiseño Tribe(s) Pechanga Tribe and shall account for treatment of any archaeological remains and associated data uncovered by brushing, grubbing, or earthmoving. (B) The project applicant shall enter into a pre-excavation agreement with the culturally affiliated Luiseño Tribe(s). The agreement shall document archeological monitoring requirements and specify the disposition of any significant resources discovered during monitoring.	Riverside County Planning Department; Project Archaeologist	Prior to the issuance of clearing, grubbing or grading permits
		4.4-3 Prior to the issuance of a grading permit and again if necessary during the development of the final project mitigation report, the project proponent shall inquire if the Pechanga Tribe has developed a standard retrievable archival system for cultural materials. If such system is in place, the Pechanga Tribe shall be given preference in housing any collection. The landowner shall relinquish ownership of all cultural resources, including all Luiseno cultural sacred items, burial goods and all archaeological artifacts that are found on the project	Riverside County Planning Department; Project Archaeologist	Concurrent with grading activities

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		site, to the culturally affiliated Luiseño Tribe(s) for proper treatment and disposition.		
		4.4-4 Archaeological and tribal monitoring shall be conducted on a full-time basis for all grading and ground disturbing activities, including archaeological testing, until the project archaeologist in consultation with the culturally affiliated Luiseño Tribe(s) Pechanga Tribe and the County of Riverside determines that resources are not likely to be encountered.	Riverside County Planning Department; Project Archaeologist	Concurrent with grading activities.
		4.4-5 If archaeological remains are found by the archaeological monitor, earthmoving shall be diverted temporarily around the deposits until they have been evaluated, recorded, excavated, and/or recovered as necessary. Earthmoving shall be allowed to proceed through the site when the archaeological supervisor, in consultation with the culturally affiliated Luiseño Tribe(s) Pechanga Tribe and the County of Riverside, determines the artifacts are recovered and/or the site is mitigated to the extent necessary.	Riverside County Planning Department; Project Archaeologist; NAHC	Concurrent with grading activities.
		4.4-6 If possible human remains are encountered during any earthmoving activities, all work shall stop in the area in which the find(s) are present, and the Riverside County Coroner must be notified. State law dictates that the Native American Heritage Commission (NAHC) shall be notified in the event that remains are determined to be human and of Native American decent, in accordance with California Public Resources Code Section 5097.98.	Riverside County Planning Department; Project Archaeologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.4-7 If a previously unknown site is encountered and it requires additional mitigation, a plan or proposal shall be prepared by the archaeologist, in consultation with the culturally affiliated Luiseño Tribe(s) Pechanga Tribe and County of Riverside, outlining the plan of action that needs to be implemented to mitigate the new site.	Riverside County Planning Department; Project Archaeologist	Concurrent with grading activities.
		4.4-8 Any recovered archaeological resources shall be identified, recorded, mapped and artifacts catalogued as required by standard archaeological practices. Examination by an archaeological specialist shall be included where necessary, dependent upon the artifacts, features or sites that are encountered. Specialists shall identify, date, and/or determine significance potential.	Riverside County Planning Department; Project Archaeologist	Concurrent with grading activities.
		4.4-9 A final report of findings shall be prepared by the archaeologist for submission to the Eastern Information Center and the County of Riverside. The report shall describe parcel history, summarize field and laboratory methods used, if applicable, and include any testing or special analysis information conducted to support the findings.	Riverside County Planning Department; Project Archaeologist	At the completion of grading activities.
Paleontological Resources Portions of the proposed project site contains Quaternary alluvium (Qofa), which has a high potential for yielding fossils. The potential for disturbance to paleontological resources during grading in older alluvium is regarded as a potentially significant impact.	Reduced to below a level of significance.	**Paleontological Resources** **4.4-10** Prior to any earth moving in areas containing older alluvium, a vertebrate paleontologist retained by the project proponent and approved by the County of Riverside shall develop a storage agreement with the LACM Vertebrate Paleontology Section, San Bernardino County Museum, or another acceptable museum repository to allow for the permanent storage and maintenance of any fossil remains	Riverside County Planning Department; Project Paleontologist	Prior to issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		recovered in the project area as a result of the monitoring program, and for the archiving of associated specimen data and corresponding geologic and geographic site data at the museum repository.		
		4.4-11 The paleontologist shall develop a mitigation plan and a discovery clause/treatment plan that, when implemented during earthmoving activities in the project area shall allow for the recovery and subsequent treatment of any fossil remains and associated specimen and site data uncovered by these activities.	Riverside County Planning Department; Project Paleontologist	Concurrent with grading activities.
		4.4-12 The paleontologist and a palaeontologic construction monitor shall attend a pre-grade meeting to explain the monitoring program to grading contractor staff and to develop procedures and lines of communication to be implemented if fossil remains are uncovered by earthmoving activities, particularly when a monitor may not be on-site.	Riverside County Planning Department; Project Paleontologist	Prior to issuance of grading permits.
		4.4-13 Palaeontologic monitoring of earthmoving activities shall be conducted on a full-time basis by the monitor during all earthmoving activities due to the exposure of sensitive strata. Earthmoving activities in areas of the project area where previously undisturbed strata will be buried but not otherwise disturbed shall not be monitored. The supervising paleontologist shall have the authority to reduce monitoring once he determines the probability of encountering fossils has dropped below an acceptable level.	Riverside County Planning Department; Project Paleontologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.4-14 If the monitor finds fossil remains, earthmoving activities shall be diverted temporarily around the fossil site until the remains have been recovered and these activities are allowed to proceed through the site by the monitor.	Riverside County Planning Department; Project Paleontologist	Concurrent with grading activities.
		4.4-15 If fossil remains are encountered by earthmoving activities when the monitor is not on site, these activities shall be diverted around the fossil site and the monitor called to the site immediately to recover the remains.	Riverside County Planning Department; Project Paleontologist	Concurrent with grading activities.
		4.4-16 If fossil remains are found, an appropriate amount of fossiliferous rock shall be recovered from the fossil site and processed to allow for the recovery of smaller fossil remains. Test samples may be recovered from other sampling sites in the rock unit.	Riverside County Planning Department; Project Paleontologist	Concurrent with grading activities.
		4.4-17 Any recovered fossil remains shall be prepared to the point of identification and identified to the lowest taxonomic level possible by knowledgeable paleontologists. The remains shall then be curated (assigned and labeled with museum repository fossil specimen numbers and corresponding fossil site numbers, as appropriate; placed in specimen trays and, if necessary, vials with completed specimen data cards) and catalogued, and associated specimen data and corresponding geologic and geographic site data shall be archived (specimen and site numbers and corresponding data entered into appropriate museum repository catalogs and computerized data bases) at the museum repository by a laboratory technician. The remains shall then be accessioned into the museum	Riverside County Planning Department; Project Paleontologist	Upon commencement of grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		repository fossil collection, where they shall be permanently stored, maintained, and, along with associated specimen and site data, made available for future study by qualified scientific investigators.		
		4.4-18 A final report of results and findings shall be prepared by the paleontologist for submission to the County of Riverside and the museum repository following accessioning of the fossil collection into the museum repository fossil collection. The report shall describe the geology and stratigraphy parcel, summarize field and laboratory methods used, include a faunal list and an inventory of catalogued fossil specimens, evaluate the scientific importance of the specimens, and discuss the relationship of any newly recorded fossil site in the parcel to relevant fossil sites previously recorded from the fossil-bearing rock unit in the parcel vicinity and from correlative rock units in other regions.	Riverside County Planning Department; Project Paleontologist	Upon completion of grading activities.
4.5 HYDROLOGY, FLOODING, AND DRAINAGE				
The proposed project would not alter the existing drainage pattern of the site or area, substantially deplete groundwater supplies or interfere substantially with groundwater recharge, or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems.	Reduced to below a level of significance.	Mitigation is not required.	None	None
4.6 WATER QUALITY				
Implementation of the proposed project would include grading that would result in potential short-term erosion and sedimentation impacts. Implementation of the proposed project also would permanently alter the composition of the surface runoff by grading the site surfaces; by construction of impervious surfaces; and by irrigation of landscaped areas. Although water quality features	Reduced to below a level of significance.	**4.6-1** The developer or builder for TTM No. 31194 shall be required, pursuant to requirements of the State Water Resources Control Board, to obtain a National Pollutant Discharge Elimination System (NPDES) construction permit, prior to issuance of grading permits. The NPDES permit will apply to all	Riverside County Flood Control and Water Conservation Department; Regional Water	Prior to the issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
would reduce direct impacts to water quality, cumulative impacts would remain significant and require mitigation.		construction activities associated with the proposed project. Construction activities include clearing, grading, or excavation that results in the disturbance of at least one acre of total land area or activity which is part of a larger common plan of development of five acres or greater. The permit requires the applicant to develop and implement a Storm Water Pollution Prevention Plan (SWPPP), that specifies Best Management Practices (BMPs) to minimize pollutants in storm water runoff, as well as non-storm water discharges. Examples of BMPs include, but are not limited to: energy dissipation structures and rip- rap at storm wear discharge points to stabilize flow and reduce velocities; mulching cleared or freshly seeded areas for erosion/sedimentation control; geotextiles and mats for erosion control during construction, storm drain inlet/outlet protection for siltation control; and slope drains for erosion control. The permit also requires a monitoring, reporting and inspection program to be developed and implemented to assure the effectiveness of the controls.	Quality Control Board	
		4.6-2 Prior to approval of a Final Map and final engineering drawings, the County shall verify that the Final Map and engineering drawings indicate the size and location of the structural source control BMPs specified by the project's Water Quality Management Plan.	Riverside County Flood Control and Water Conservation District	Prior to approval of Final Map and final engineering drawings.
		4.6-3 Prior to issuance of occupancy permits, the County shall verify that the project's CC&Rs specify the homeowners' association ownership and maintenance requirements for private storm drains	Riverside County Planning Department	Prior to issuance of occupancy permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		and catch basins as specified in the project's Water Quality Management Plan.		
		4.6-4 Prior to issuance of occupancy permits, the County shall verify that the project's CC&Rs contain the activity restrictions and the property owner environmental education awareness materials for water quality specified by the project's Water Quality Management Plan.	Riverside County Planning Department	Prior to issuance of occupancy permits.
4.7 GEOLOGY AND SLOPE STABILITY				
The portions of the site that contain alluvium and undocumented fill (if any) are considered unsuitable in their present condition for support of structural loads. The presence of alluvium and potential for presence of undocumented fill represents a potentially significant impact that will require mitigation in the form of remedial grading. Construction of proposed structures in accordance with the Uniform Building Code (UBC) will ensure that potential ground shaking impacts will not result in a significant impact. Liquefaction pestilential is low, seismically induced settlement is unlikely and the potential for tsunamis and seiches is non-existent.	Reduced to below a level of significance.	**4.7-1** Prior to the issuance of grading permits and in compliance with the requirements of Riverside County Ordinances, a detailed geotechnical report(s) shall be submitted to the County of Riverside Engineering Division for review and approval. The report(s) shall identify and address site-specific (a) underlying soil conditions, (b) liquefaction potential, seismic parameters and building requirements and slope stability. The measures recommended by the final geotechnical report(s) shall be identified on applicable grading plans and shall be implemented to the satisfaction of the County Geologist.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Prior to the issuance of grading permits.
		4.7-2 All earthwork and grading shall be performed in accordance with all applicable requirements of the Grading and Excavation Code and the Grading Manual of the County of Riverside, in addition to the provisions of the 1997 Uniform Building Code (UBC), including Appendix Chapter 33. Grading shall also be performed in accordance with applicable provisions of the Standard Grading Specifications contained in the geotechnical report	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		prepared by Leighton and Associates (see EIR Appendices H1. and H2.).		
		4.7-3 The project geotechnical engineer or qualified representative shall be notified at appropriate times to provide observation and testing services during clearing operations and to verify compliance with the recommendations made by the project geotechnical reports. In addition, any buried structures or unusual or adverse soil conditions encountered that are not described or anticipated in the project's geotechnical reports shall be brought to the immediate attention of the geotechnical consultant.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities.
		4.7-4 All existing low-density and potentially collapsible soil materials, such as loose manmade fill and alluvium, shall be removed to underlying competent bedrock from each area to receive compacted fill. Prior to placing structural fills, the exposed bottom surfaces in each removal area shall first be scarified to a depth of 6 inches or more, watered or air-dried as necessary to achieve near-optimum moisture conditions, and then recompacted in-place to a minimum relative compaction of 90 percent. Actual depths and horizontal limits of any removals shall be determined during grading on the basis of in-grading observations and testing performed by the project geotechnical consultant and/or engineering geologist.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities and prior to the issuance of building permits.
		4.7-5 In the event import soils are needed to achieve final design grades, all potential import materials shall be free of deleterious/oversize materials, non-	Riverside County Engineering Division; Riverside County	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		expansive, and approved by the project geotechnical consultant prior to commencement of delivery onsite.	Geologist; Project Geologist	
		4.7-6 An observation of clearing operations, removal of unsuitable surficial materials, and general grading procedures shall be performed by the project geotechnical consultant or his/her representative. Fill shall not be placed without prior approval from the geotechnical consultant. The project geotechnical consultant or his/her representative shall also be present on-site during all grading operations to verify proper placement and adequate compaction of all fill materials, as well as to verify compliance with the other recommendations presented in the project geotechnical reports.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities.
		4.7-7 No oversized rock (greater than 12 inches) shall be place within 10 feet of the finished grade.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities.
		4.7-8 Cut and fill slopes steeper than 3:1 (horizontal: vertical) and exceeding a vertical height of 30 feet shall be constructed with drainage terraces in accordance with Chapter 33 of the 1997 UBC.	Riverside County Engineering Division; Riverside County Geologist; Project Geologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.8 SOILS, SLOPES AND EROSION POTENTIAL				
The majority of the on-site materials consist of low plastic clays to fine sandy silts, and generally possess a very low to low expansion potential. While not observed during field reconnaissance, it is possible for undocumented fills or other materials with an expansion potential greater than low could be encountered during construction. If present, these materials would not be suitable for structural development, and this is regarded as a potentially significant impact. Because the topographic character of the site will be maintained and because the project will comply with the Riverside County Grading Standards, significant impacts to landform would not occur. Soils that have a high erosion susceptibility, along with fill materials used for development areas, would be subject to potentially significant project-related erosion because of the removal of stabilizing vegetation and exposure of these erodible materials to wind and water.	Reduced to below a level of significance.	**4.8-1** Prior to the issuance of a grading permit, an overall Conceptual Grading Plan shall be submitted for Planning Department approval. The Grading Plan shall include: 1) techniques employed to prevent erosion and sedimentation during and after the grading process; 2) approximate time frames for grading; 3) identification of areas which may be graded during high probability rain months (January through March); and 4) preliminary pad and roadway elevations.	Riverside County Planning Department	Prior to the issuance of grading permits.
		4.8-2 Where cut and fill slopes are created higher than three feet, detailed Landscaping and Irrigation Plans shall be submitted to the Planning Department prior to Grading Plan approval. The plans shall be reviewed for type and density of ground cover, shrubs, and trees to ensure that plant material would be effective as erosion control and that all slopes would be landscaped per County Ordinance 457.	Riverside County Planning Department	Prior to issuance of grading permits.
		4.8-3 All grading procedures shall be in compliance with the Riverside County Grading Standards including requirements for erosion control during rainy months. The requirements for compliance with Riverside County Grading Standards shall be noted on all grading plans.	Riverside County Planning Department; Riverside County Engineering Division.	Prior to issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.**8-4** Graded, but undeveloped land shall be maintained weed-free and planted with interim landscaping within 90 days of completion of grading, unless building permits are obtained.	Riverside County Planning Department	Upon completion of grading activities.
		4.8-5 Prior to any grading activities, a soils report and geotechnical study shall be performed to further analyze on-site soil conditions and slope stability and shall include the appropriate measures to control erosion.	Riverside County Planning Department	Prior to issuance of grading permits.
		4.8-6 Potential brow ditches, terrace drains, or other minor swales, determined necessary by the County of Riverside at future stages of project review, shall be lined with natural erosion control materials or concrete.	Riverside County Planning Department	Prior to the issuance of grading permits.
		4.8-7 The locations of potentially compressible soils shall be identified on all Grading Plans. Where development is proposed in areas of compressible soils, deep foundation systems shall be used, or compressible soils shall be completely over excavated and compacted.	Riverside County Planning Department	Prior to the issuance of grading permits.
4.9 AGRICULTURE				
Approximately 164.7 acres of the proposed project site are designated as Local Important Farmland. Upon project implementation, farming on these soils would be precluded. Williamson Act Contracts existed on the property, but Notices of Non-Renewal were recorded over 10 years ago, and dimishment of Menifee Agricultural Preserve No. 4, Map No. 902 was adopted by Resolution No. 2003-534 on December 1, 2003. The proposed project is located within 300 feet of agriculturally zoned properties and is required to comply with County Ordinance No. 625.	Reduced to below a level of significance.	**4.9-1** The project shall comply with the County's "Right to Farm" Ordinance (Ordinance No. 625). The ordinance is intended to provide for a means of giving notice to prospective buyers of homes in newly built subdivisions and recently subdivided parcels that they are moving into an agricultural area and that a farm has been in operation legally for at least three years shall not be or become a nuisance simply because residential uses have	Riverside County Planning Department	Prior to issuance of occupancy permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		entered the area and are offended by the odors, dust, etc.		
4.10 MINERAL RESOURCES				
The project would not result in the loss of an Aggregate Resource Area. The property is not located near a State classified or designated area or existing surface mine.	Not significant.	Mitigation is not required.	None	None
4.11 TOXIC SUBSTANCES				
During grading and construction, there is a low potential for discovery of hazardous materials; this possibility is regarded as a potentially significant impact.	Reduced to below a level of significance.	**4.11-1** Users of household hazardous materials such as paints, roofing materials and solvents during construction shall comply with applicable federal, state, and local regulation requiring elimination and reduction of waste at the source by prevention of leakage, by segregation of hazardous waste, and by process of materials change.	Riverside County Department of Environmental Health	Prior to the issuance of building permits.
		4.11-2 All site improvements not removed from the property by the current owner shall be disposed of offsite, in accordance with current local, state, and federal disposal regulations. Any petroleum contaminated materials, lead-based paints or products, mercury, asbestos containing materials and/or buried trash/debris encountered during removal and/or grading shall be evaluated by an experienced environmental consultant prior to removal.	Riverside County Department of Environmental Health	Prior to the issuance of grading permits.
		4.11-3 In the event that any subsurface hazardous materials, including soil and/or groundwater contamination, are found during grading or construction, all activity in the area of discovery and/or in an appropriate radius of the area of discovery shall temporarily cease and the County of Riverside Environmental Health Department shall be notified prior to the resumption of any	Riverside County Department of Environmental Health	Concurrent with grading and construction activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		construction activity in the area of discovery, the site shall be deemed safe by the appropriate entity prior to the resumption of grading and/or constructions activities.		
		4.11-4 If soil is to be imported or exported to or from the site during grading or other construction activities, the transported soil it shall be sampled for contaminants assessed prior to proposed off-site use or disposal. Imported soil shall be free from contamination. Exported soil, if contaminated, shall be and handled in accordance with prevailing environmental laws and regulations, including Land Use Disposal Restrictions, if applicable.	Riverside County Department of Environmental Health	Concurrent with grading and construction activities.
		4.11-5 Prior to the issuance of grading permits, soil sampling shall occur to identify levels of methane, pesticides, herbicides, fertilizer, and other agricultural chemicals. Methane and chemical levels shall be verified to be within allowable limits as regulated by prevailing environmental laws and regulations prior to the issuance of building permits.	Riverside County Department of Environmental Health	Prior to the issuance of grading and building permits.
4.12 CIRCULATION AND TRAFFIC				
A total of 4,632 average daily trips would be generated by the project. Vehicle trips would impact study area intersections and street segments in the Opening Year and Buildout Year 2025.	Less than significant direct impacts. Cumulatively significant impacts to freeway mainline segments.	**4.12-1** Wickerd Road shall be constructed from the easterly project boundary to the westerly project boundary to align with Garbani Road at its ultimate full-section width as a Major roadway.	Riverside County Transportation Department	Prior to issuance of building and occupancy permits

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Cumulatively significant impacts to intersections identified in EIR Tables 4-11 and 4-12 in the event that the approval of other jurisdictions (Caltrans and Murrieta) for identified intersection improvements cannot be obtained.			
		4.12-2 Garbani Road shall be constructed as a paved two-lane extension from Evans Road to the westerly project to provide site access with a minimum of a 32 foot pavement section.	Riverside County Transportation Department	Prior to issuance of building and occupancy permits
		4.12-3 Wickerd Road shall be constructed as a paved two-lane extension from the easterly project boundary to Haun Road to provide site access with a minimum of a 32 -foot pavement section.	Riverside County Transportation Department	Prior to issuance of building and occupancy permits
		4.12-4 Internal roadways shall be constructed as Collector Roadways in accordance with County Transportation Department standards.	Riverside County Transportation Department	Prior to issuance of building and occupancy permits
		4.12-5 On-site traffic signing and striping shall be implemented in conjunction with detailed construction plans for the project site.	Riverside County Transportation Department	Concurrent with project implementation.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.12-6 Sight distance at each project access roadway shall be reviewed with respect to standard City of Perris, Caltrans, and County of Riverside sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.	Riverside County Transportation Department	Concurrent with project implementation.
		4.12-7 The project applicant shall participate in the phased construction of off-site traffic signals through the County's traffic signal fee program.	Riverside County Transportation Department	Concurrent with project implementation.
4.13 AIR QUALITY				
Temporary construction activity air emissions will occur during project buildout, including dust, equipment exhaust and architectural surface treatments fumes.	Reduced to below a level of significance: PM-10 construction dust) Direct and cumulatively significant and unmitigable: NOx (construction equip. exhaust) VOC (arch. surface coatings)	**4.13-1** Prior to the issuance of grading permits, the owner/permittee shall submit an accelerated construction dust abatement management program to the County of Riverside. This involves developing a dust control program to supplement the routine watering that constitutes best available control measures (BACMs) in excess of any minimum SCAQMD Rule 403 requirements. BACMs that may be adopted and integrated into an enhanced dust control program might include hydroseeding previously disturbed areas while awaiting construction, adding chemical binders or surfactants to increase the effectiveness of watering, and/or early paving or chip sealing of roads. Soil disturbance should be terminated when high winds (>25 mph) make dust control extremely difficult.	Riverside County Building and Safety Department; South Coast Air Quality Management District	Prior to the issuance of grading permits.
		4.13-2 The project applicant/contractor shall reduce "spill-over" effects by preventing soil erosion, washing dirt from vehicles entering public roadways, and	Riverside County Building and Safety Department	Concurrent with grading and construction activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		washing/sweeping project access to public roadways on a regular schedule.		
		4.13-3 All trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.	Riverside County Building and Safety Department	Concurrent with grading and construction activities.
		4.13-4 (A) Prior to construction commencement for each phase of the proposed development, emissions control from on-site equipment through a routine mandatory program of low-emissions tune-ups shall be required. Electric or natural gas powered construction equipment shall be used as feasible as determined by the construction superintendent. During construction, electricity should be used from power poles instead of from portable generators as feasible as determined by the construction superintendent.	Riverside County Building and Safety Department	Prior to commencement of grading and construction activity phases.
		4.13-5 The application of architectural surface treatments (i.e., paint, etc.) shall be limited to 100 gallons per day over the project buildout lifetime using the most currently required low-VOC paint (100 grams or less of ROG per liter) and high pressure-low volume (HPLV) paint applicators.	Riverside County Building and Safety Department	Concurrent with construction activities.
In the long-term, the proposed project will contribute to the regional inability to attain the SCAQMD emissions standards due to its contribution of mobile source emissions.	Cumulatively significant and unmitigable: CO (mobile source	Feasible mitigation for long-term CO emissions is not available on a project-specific basis.	N/A	N/A

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	emissions)			
4.14 NOISE				
Construction activities, especially heavy equipment, will create short-term noise increases near the project site. The long-term noise impacts will be from traffic noise. Project-generated traffic will cause an incremental increase in area-wide noise levels throughout the Menifee Valley area.	Reduced to below a level of significance.	**4.14-1** Construction activities shall comply with County Noise Ordinance No. 457, relating to construction noise.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-2 Construction shall be restricted to the hours of 7 AM - 5 PM weekdays and Saturdays.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-3 If blasting, drilling or rock crushing occur within 800 feet of any occupied residence, temporary noise barriers (berms, walls, etc.) shall be erected to mitigate noise from these activities to an exterior noise level of 65 dB(A) or less at the nearest residential lot line.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-4 Prior to any blasting operations, all residences within 800 feet of any potential blast location shall be notified in writing of the blasting schedule, and again within a minimum of 72 hours in advance of blasting.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-5 All construction vehicles or equipment, whether fixed or mobile, shall be equipped with properly operating and maintained mufflers.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-6 Stockpiling and/or vehicle staging areas shall be located as far as practical from occupied residences.	Riverside County Building and Safety Department	Concurrent with grading and building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.14-7 Prior to the issuance of occupancy permits for affected lots, solid barriers (walls, berms or a combination thereof) shall be provided in the following locations: a. 7.5-foot high masonry block walls or combination berm and block wall shall be constructed along Lots 218 to 220 and 229 to 239 on Wickerd Road. 7-foot high masonry block walls or combination berm and block wall shall be constructed along Lots 1 to 6, 51 to 69, 71, 72, 83 to 85, 162 to 168, 292, 293, 304, 305, 313, 314, and 320 to 326 on Wickerd Road. 6-foot high masonry block wall/privacy wall or combination berm and block wall shall be constructed along Lots 391 to 403 on Evans Road. Corner Wrap Around and Open Space Lots masonry block walls or combination berm and block wall shall be constructed along those lots along Wickerd Road that have been identified in the County's review of the acoustical analysis (see EIR Appendix G1). The height shall be determined by the adjacent wall height. These walls shall be erected so that the top of each wall extends at least 6 to 7.5 feet (depending on location) above the pad elevation of the shielded lot. In cases where the road is elevated above the pad, the wall shall extend at least 6 to 7.5 feet (depending on location) above the highest point between the homes and the road. Final noise barrier heights should be determined when final grading plans show lot location, precise road, and pad elevations.	Riverside County Building and Safety Department	Concurrent with grading and building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.14-8 Mechanical ventilation (e.g. air conditioning) shall be provided for all homes located adjacent to Wickerd Road and Evans Road.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-9 Upgraded windows with a Sound Transmission Class (STC) rating 30 or higher shall be installed in all homes located adjacent to Wickerd Road.	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-10 To minimize the potential interior noise impacts, homes facing Wickerd Road and Evans Road should be provided with weather-stripped solid core exterior doors and exterior wall/roof assembles free of cut-outs and openings	Riverside County Building and Safety Department	Concurrent with grading and building permits.
		4.14-11 Prior to issuance of building occupancy permits, the applicant shall provide the County of Riverside Department of Public Health with an interior acoustical report for review and approval. The report must demonstrate that the interior noise of those homes along Wickerd Road and Evans Road has been reduced to at or below 45 Ldn.	Riverside County Building and Safety Department	Prior to issuance of occupancy permits. Concurrent with construction activities.
4.15 OPEN SPACE, PARKS, AND RECREATION				
The project would provide a neighborhood park on ~~6.8~~ 6.4 acres and would provide ~~59.8~~ 54.3 acres of open space and landscaped areas. According to the State Quimby Act, 7.3 acres of parkland are required. The project would provide ~~0.51~~ 0.9 acres less parkland than required, resulting in a significant impact.	Reduced to below a level of significance.	**4.15-1** The project applicant shall be required to pay an in-lieu park fee to the County for its 0.51 0.9-acre park deficiency prior to the issuance of building permits.	Riverside County Parks and Open Space District.	Prior to the issuance of building permits.
4.16 FIRE PROTECTION				
Implementation of the proposed project would place additional demand on the County Fire Department and would cumulatively impact the Department's ability to service the planned population.	Reduced to below a level of significance.	**4.16-1** In accordance with Riverside County Subdivision Ordinance 460, fire flows shall have 1000 gallons per minute at 20 psi residual pressure.	Riverside County Fire Department	Prior to the issuance of building permits or water improvement plans.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.16-2 All water mains and fire hydrants shall be constructed in accordance with Ordinance 460. Hydrant spacing at each intersection shall be no more than 330 feet apart.	Riverside County Fire Department	Prior to the issuance of building permits or water improvement plans.
		4.16-3 Disclosures of potentially damaging wildfires in the area must be disclosed to future homebuyers by the seller as part of the buyer disclosure statements prior to purchase as required by the California Civil Code.	Riverside County Fire Department	Prior to the issuance of occupancy permits.
		4.16-4 Prior to issuance of the grading permits, a fire protection/vegetation management plan shall be prepared and submitted to the Fire Department for review and approval.	Riverside County Fire Department	Prior to the issuance of grading permits.
		4.16-5 Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including fire protection facilities.	Riverside County Fire Department	Prior to the issuance of occupancy permits.
4.17 SHERIFF SERVICES				
Implementation of the proposed project would cumulatively impact the ability of the Sheriff's Department to provide service to the project area.	Reduced to below a level of significance.	**4.17-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including sheriff protection facilities.	Riverside County Planning Department	Prior to the issuance of building permits.
		4.17-2 The project applicant shall inform the Crime Prevention Unit of the Sheriff's Department of all new homeowners associations. These associations	Riverside County Sheriff's Department	Prior to the issuance of occupancy permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		may be used as the foundation for establishing Neighborhood Watch Programs.		
4.18 SOLID WASTE				
Implementation of the proposed project would result in the generation of approximately599.83tons/yr. of solid waste, thereby cumulatively impacting the capacity of existing landfills.	Reduced to below a level of significance.	**4.18-1** The refuse hauler for the project site shall be advised of the efforts the developer will be pursuing relating to recycling and waste reduction (i.e., curbside recycling, in accordance with County Resolution No. 90-688. The use of such programs would be encouraged by the developer through information (e.g., location, materials accepted, etc.) provided in sales literature.	Riverside County Waste Management Department	Prior to the issuance of occupancy permits.
		4.18-2 The project applicant shall participate in established County-wide programs to reduce solid waste generation.	Riverside County Waste Management Department	Prior to the issuance of occupancy permits.
		4.18-3 The master Homeowners' Association and/or landscape maintenance district or association shall either mulch (shred and leave on landscaped areas), compost on-site, or separate from other types of waste to send to a composting facility within the local area, green waste (i.e., trimmings from grass, shrubs, or trees) from common project landscaped areas and the community park.	Riverside County Waste Management Department	Prior to the issuance of occupancy permits.
		4.18-4 The project developer shall pursue and implement any available and feasible source reduction programs for the disposal of construction materials to the satisfaction of the Riverside County Waste Management Department.	Riverside County Waste Management Department	Prior to the issuance of occupancy permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		4.18-5 The project applicant shall comply with the State Model Ordinance, which requires adequate areas for the collection and loading of recyclable materials to be provided within detached, single family residential areas where solid waste is collected and loaded in a location which serves five or more units.	Riverside County Waste Management Department	Prior to the issuance of building permits.
4.19 WATER AND WASTEWATER SERVICES				
Project implementation would result in a peak demand for 274,000 gallons of water per day. The project would provide the necessary water and wastewater facilities to serve the project. The project is required to be in compliance with the basin plan of the Regional Water Quality Control Board, Santa Ana Region. In addition, the project is required to obtain updated will-serve letters from the EMWD before subdivision or use permit implementation. The project will also be conditioned to construct an on- site recycled water system and associated off-site recycled water facilities, which will provide a non-potable water source to the site for irrigating common landscaped areas, such as green-belts and open space areas.	Not significant.	Mitigation is not required.	None	None
4.20 SCHOOLS				
Implementation of the proposed project would generate approximately 189 elementary students, 103 middle school students and 123 high school students.	Reduced to below a level of significance.	**4.20-1** Prior to the issuance of each residential building permit(s), school fees shall be paid in accordance with the requirements of the State of California (Senate Bill 50) or the applicant shall enter into a mitigation agreement with the Menifee Unified School District and the Perris Union High School District.	Menifee Union School District; Perris Union High School District	Prior to the issuance of building permits.
4.21 LIBRARIES				
Development of the proposed project would increase the region's population, creating in turn an additional demand for library facilities and services.	Reduced to below a level of significance.	**4.21-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that	Riverside County Planning Department	Prior to the issuance of building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		the County applies to the funding of public facilities, including library facilities.		
4.22 HEALTH CARE SERVICES				
The proposed project would result in a population increase and create a greater demand for health services in the region. Health care service is a regional issue which generally responds to current demand.	Reduced to below a level of significance.	**4.22-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the County Development Impact Fee (DIF) Ordinance (Ord. No. 659), which requires a fee payment that the County applies to the funding of public facilities, including public health facilities.	Riverside County Planning Department	Prior to the issuance of building permits.
4.23 ENERGY RESOURCES				
Implementation of the proposed project would result in an increased demand for energy resources. Energy suppliers have indicated an ability to serve the proposed project based on existing and planned capacities.	Not significant.	Mitigation is not required.	None	None
4.24 UTILITIES				
Implementation of the proposed project would result in an increased demand for utilities. Utility service providers have indicated an ability to serve the proposed project based on existing infrastructure.	Not significant.	Mitigation is not required.	None	None
4.25 DISASTER PREPAREDNESS				
Fire Hazards	Reduced to below a level of significance.	See *Fire Protection,* above.		
Seismic Hazards		See *Soils and Erosion* and *Geology and Slope Stability*, above		
Soils and Erosion		See *Soil and Erosion*, above.		
Flooding		See *Hydrology, Flooding and Drainage,* above.

Appendix B. 2022 EIR Addendum – Mitigation Monitoring and Reporting Program

Appendix B. 2022 EIR Addendum - Mitigation Monitoring and Reporting Program

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.1.1 LAND USE CONSISTENCY	Not significant.	Mitigation is not required.	None	None
4.1.2 AESTHETICS, VISUAL QUALITY, LIGHT AND GLARE	Reduced to below a level of significance.	**4.2-1** The project shall comply with the applicable provisions of City of Menifee's Municipal Code Chapter 6.01, Dark Sky Ordinance. The Dark Sy Ordinance is the same as County Ordinance No. 655, which was established to regulate the use of certain light fixtures, and requires evidence of compliance with the lighting standards contained therein. All outdoor lighting systems shall comply with the Dark Sky Ordinance.	City of Menifee Planning Department	Prior to the issuance of building permits.
4.1.3 BIOLOGICAL RESOURCES	Reduced to below a level of significance.	**Vegetation Communities** **4.3-1** TTM No. 31194-4 Lot E, (formerly Lot #503 of TTM 31194) (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing, or grading permits.
	Reduced to below a level of significance.	**Sensitive Wildlife Species** **4.3-2** Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the City of Menifee. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix C which states: a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols. b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Reduced to below a level of significance	**4.3-3** If construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged. a. The white-tailed kite is "fully-protected" by the California Department of Fish and Wildlife. If this species is documented as nesting on the Project Site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the CDFW.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
	Reduced to below a level of significance	**4.3-4** Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the projects potentially significant impacts to the Stephens' kangaroo rat.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
	Reduced to below a level of significance.	**Jurisdictional Wetlands and Waters** **4.3-5** Prior to the issuance of grading permits, the applicant shall submit documentation to the City of Menifee verifying that the necessary permits required by the U.S. Army Corps of Engineers (USACE), California Department of Fish and Wildlife (CDFW) and Regional Water Quality Control Board (RWQCB) have been obtained. The USACE has a no net loss policy which requires that any unavoidable impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures or similar measures as approved by the USACE, CDFW, and RWQCB would reduce impacts to USACE and CDFW jurisdictional areas to a level less than significant: a. On or off-site replacement of USACE jurisdictional waters and wetlands at a ratio no less than 1:1;	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		b. On- or off-site replacement of CDFW jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or c. Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).		
		4.3-6 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
		4.3-7 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the County prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.
		4.3-8 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area". The County of Riverside Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.	City of Menifee Planning Department	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.1.4 ARCHAEOLOGICAL AND PALEONTOLOGICAL RESOURCES	Reduced to below a level of significance.	**Archaeological Resources:** **4.4-1** Prior to any clearing, grubbing and/or earthmoving activities, a qualified archaeologist shall be retained by the developer. The potential for discovery of archaeological resources on the site has been indicated as medium to high; therefore, consultation with the culturally affiliated Luiseño Tribe(s) is required. A pre-grading meeting between the archaeologist, a Native American observer, and the excavation and grading contractor shall take place to ensure an understanding of the mitigation measures required during construction.	City of Menifee Planning Department; Project Archaeologist	Prior to the issuance of grading permits.
	Reduced to below a level of significance	**4.4-2** (A) Prior to issuance of a grading permit, the archaeologist shall develop a mitigation plan and a discovery clause/treatment plan, which shall include mitigation monitoring to be implemented during earthmoving on the Project Site. The treatment plan shall be developed in consultation with the culturally affiliated Luiseño Tribe(s) and shall account for treatment of any archaeological remains and associated data uncovered by brushing, grubbing, or earthmoving. The mitigation and discovery/treatment plan should include a discussion of key personnel and their specific roles and responsibilities; archaeological monitoring methods; controlled excavation and/or destruction methods; environmentally sensitive areas procedures; preconstruction field surveys to identify known and unknown cultural resources; a discussion of archaeological resource classes that may be encountered during construction; and protocols for identifying, evaluating, treating, and curating archaeological resources that may be encountered. The plan should also include the following attachments: an Environmentally Sensitive Area Action Plan to preserve known bedrock milling features in place; cultural resource sensitivity training for construction personnel (i.e., Worker Environmental Awareness Program); methods for documenting bedrock milling features through close range photogrammetric documentation and viewshed analysis (i.e., direct line of sight and 180-degree viewsheds); and methods of relocating bedrock milling features to the nearest dedicated open space where they will be preserved in perpetuity. The plan will be prepared in consultation with culturally affiliated Luiseño Tribe(s). (B) The project applicant shall enter into a pre-excavation agreement with the culturally affiliated Luiseño Tribe(s). The agreement shall document archaeological	City of Menifee Planning Department; Project Archaeologist	Prior to the issuance of clearing, grubbing or grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		monitoring requirements and specific the disposition of any significant resources discovered during monitoring.		
	Reduced to below a level of significance	**4.4-3** The landowner shall relinquish ownership of all cultural resources, including all Luiseño cultural sacred items, burial goods, and all archaeological artifacts that are found on the Project Site, to the culturally affiliated Luiseño Tribe(s) for proper treatment and disposition. The Project proponent will hire a qualified archaeologist that meets Secretary of Interior Standards to oversee the surface collection of isolated prehistoric artifact RLCC-01-ISO. The field work shall be completed by an archaeologist and Native American monitor(s) on behalf of the culturally affiliated Luiseño Tribe(s).	City of Menifee Planning Department; Project Archaeologist	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-4** Archaeological and tribal monitoring shall be conducted on a full-time basis for all grading and ground-disturbing activities, including archaeological testing, until the project archaeologist in consultation with the culturally affiliated Luiseño Tribe(s) and the City determines that resources are not likely to be encountered.	City of Menifee Planning Department; Project Archaeologist	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-5** If archaeological remains are found by the archaeological monitor, earthmoving shall be diverted temporarily around the deposits until they have been evaluated, recorded, excavated, and/or recovered as necessary. Earthmoving shall be allowed to proceed through the site when the archaeological supervisor, in consultation with the culturally affiliated Luiseño Tribe(s) and the City of Menifee, determines the artifacts are recovered and/or the site is mitigated to the extent necessary.	City of Menifee Planning Department; Project Archaeologist; NAHC	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-6** If possible human remains are encountered during any earthmoving activities, all work shall stop in the area in which the find(s) are present, and the Riverside County Coroner must be notified. State law dictates that the Native American Heritage Commission (NAHC) shall be notified in the event that remains are determined to be human and of Native American descent, in accordance with California Public Resources Code Section 5097.98.	City of Menifee Planning Department; Project Archaeologist	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-7** If a previously unknown site is encountered and it requires additional mitigation, a plan or proposal shall be prepared by the archaeologist, in consultation with the	City of Menifee Planning Department; Project Archaeologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		culturally affiliated Luiseño Tribe(s) and City of Menifee, outlining the plan of action that needs to be implemented to mitigate the new site.		
	Reduced to below a level of significance	**4.4-8** Any recovered archaeological resources shall be identified, recorded, mapped, and artifact catalogued as required by standard archaeological practices. Examination by an archaeological specialist shall be included where necessary, dependent upon the artifacts, features or sites that are encountered. Specialists shall identify, date, and/or determine significance potential.	City of Menifee Planning Department; Project Archaeologist	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-9** A final report of findings shall be prepared by the archaeologist for submission to the Eastern Information Center and the City of Menifee. The report shall describe parcel history, summarize field and laboratory methods used, if applicable, and include any testing or special analysis information conducted to support the findings. The draft archaeological monitoring report will, at a minimum, present the results of monitoring field work, including enforcement of Environmentally Sensitive Areas; the Worker Environmental Awareness Program; efforts to relocate bedrock milling features; copies of daily monitoring logs; and appended photogrammetric documentation and viewshed analysis of bedrock milling features. If archaeological resources are discovered while implementing the monitoring program, the final monitoring report may also report on the results of lab analysis and special studies, and document the final treatment and disposition of the artifacts. The archaeological monitoring report will be completed in consultation with the culturally affiliated Luiseño Tribe(s). The Project proponent is responsible for completing a final monitoring report that addresses comments from the lead agency, Project proponent, and/or consulting tribes. Final reports must be submitted to the lead agency, Project proponent, consulting tribes, and the Eastern Information Center at the University of California, Riverside.	City of Menifee Planning Department; Project Archaeologist	At the completion of grading activities.
	Reduced to below a level of significance.	**<u>Paleontological Resources</u>** **4.4-10 Review Geotechnical Report Data.** In conjunction with the final design phase of each program-related improvement, a qualified vertebrate paleontologist will review the geotechnical report data, with particular regard to location and depth of	City of Menifee Planning Department; Project Paleontologist	Prior to issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		earthmoving and the rock unit(s) being encountered. The review is for the purpose of assessing potential for fossil remains being encountered by earth moving. If previously undisturbed strata with potential for containing fossil remains will be encountered by earthmoving, measures 4.4-11 through 4.4-18 will be implemented.		
	Reduced to below a level of significance	**4.4-11 Museum Storage Agreement.** The Western Science Center (WSC) will be the designated museum repository for any vertebrate, invertebrate, and plant fossil remains and associated specimen data and corresponding geologic and geographic site data that might be recovered from the site as a result of the Paleontological Resource Impact Mitigation Plan (PRIMP). Prior to any earthmoving on-site, the paleontologist will develop a formal agreement with the museum regarding final disposition and permanent storage and maintenance of the fossil collection and associated data. The agreement will cover, but not necessarily be limited to, museum requirements regarding: 1) level of treatment of the collection; 2) storage and maintenance fees, if any; 3) purchase of specimen storage cabinets and drawers, as well as specimen trays, vials, specimen data cards, and other curatorial supplies, if required.	City of Menifee Planning Department; Project Paleontologist	Concurrent with grading activities.
	Reduced to below a level of significance	**4.4-12 Discovery Clause/Treatment Plan:** As part of the PRIMP, the paleontologist will develop a discovery clause/treatment plan (DC/TP) to allow for additional tasks—recovery; geologic mapping; fossiliferous rock sample processing; specimen preparation, identification, curation, cataloguing, data entry; specimen storage and maintenance by museum—and manpower required to treat a large or productive fossil occurrence that cannot be treated without diverting the monitor from routine monitoring. The DC/TP will also include approved procedures and lines of communication to be followed by specific individuals if fossil remains are uncovered by earthmoving, particularly when a palaeontologic monitor is not present on-site. Names and telephone numbers of contact personnel will be included in the lines of communication. The preparation of this PRIMP ensures compliance with Mitigation Measure 4.4-12.	City of Menifee Planning Department; Project Paleontologist	Prior to issuance of grading permits.
	Reduced to below a level of significance	**4.4-13 Preconstruction Meeting:** The paleontologist or field supervisor, as well as a palaeontologic construction monitor, will attend a preconstruction meeting to explain the PRIMP to construction contractor and Richland Communities staff. The presentation will summarize mitigation procedures to be employed by PRIMP	City of Menifee Planning Department; Project Paleontologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		personnel and will detail procedures and lines of communication, as specified in the City of Menifee Conditions of Approval, to be followed by specific project personnel when fossil remains are found on-site. The paleontologist or field supervisor will inform the construction contractor of the following items: 1) Routine mitigation measures (primarily monitoring and test screening) to be employed by a monitor during earthmoving. 2) The potential for fossil remains being uncovered by earthmoving in particular areas of the site and the need to implement specific actions and additional mitigation measures when a fossil occurrence is uncovered by earthmoving. 3) Functions and responsibilities of the monitor when fossil remains are uncovered by earthmoving and can be recovered without diverting the monitor from monitoring—temporarily divert earth moving around fossil site until remains are evaluated and recovered, and earthmoving is allowed to proceed through the site by monitor; if approved by the construction contractor, enlist the assistance of earth-moving equipment and operator to expedite recovery of remains, obviate need for additional personnel, and reduce any potential construction delay. 4) Functions and responsibilities of the monitor when a fossil occurrence is uncovered by earthmoving and is sufficiently large or productive that it cannot be recovered without diverting the monitor from monitoring. a. Flag the site. b. Advise construction contractor to avoid fossil site until further notice (usually less than 2 days). c. Call the project paleontologist or field supervisor to site. 5) Functions and responsibilities of the paleontologist or field supervisor when notified by the monitor that a large or productive fossil occurrence has been		

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		uncovered by earthmoving and cannot be recovered without diverting the monitor from monitoring. Evaluate occurrence to determine if recovery is warranted. a. If recovery is warranted, notify construction contractor and Richland Communities of the necessity for implementing additional mitigation measures specified in DC/TP; initiate increased level of monitoring, if not already in effect, in immediate vicinity of fossil site and assigning additional personnel to PRIMP. b. Within 24 hours after approval, mobilize recovery crew to recover occurrence; supervise recovery of occurrence and its transport to laboratory facility or to a location elsewhere at site approved by the construction contractor for initial/field processing of a fossiliferous rock sample or to laboratory facility for preparation of a fossil specimen. c. If warranted and approved by construction contractor, enlist the assistance of the earth-moving equipment and operator to expedite recovery of occurrence. d. To obviate need for additional personnel and reduce any potential construction delay, after recovery of occurrence, have construction contractor allow earth moving to proceed through fossil site. e. Notify Richland Communities of recovery (or of decision not to recover fossil occurrence, if appropriate) and of authorization for earth moving to proceed through fossil site. 6) Responsibilities of the construction contractor and earth-moving equipment operators if fossil remains are uncovered by earthmoving, particularly if a monitor is not present at the site when the remains are encountered. a. Avoid disturbance of fossil site by earth moving.		

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		b. Notify monitor, the paleontologist, or the field supervisor and Richland Communities of the fossil occurrence. c. Avoidance of fossil site by earthmoving activities. d. Assist with equipment and operator to expedite recovery of occurrence. These measures will obviate need for additional personnel, reduce any potential construction delay, and allow for earthmoving to proceed through the site following approval by monitor. The construction contractor and Richland Communities staff will be shown examples of fossil specimens similar to those that might be encountered by earthmoving on-site. If warranted, the paleontologist or field supervisor and a monitor will give a similar presentation to the earth-moving equipment operators at one of their earliest safety meetings. The operators will be instructed on recognizing fossil remains in the field, informed of their responsibilities if they observe fossil remains when the monitor is not present at the site (avoid disturbance of occurrence by earthmoving; have construction contractor call monitor to fossil site; expedite recovery of occurrence, if requested), and advised that unauthorized collecting of fossil remains is illegal.		
	Reduced to below a level of significance	**4.4-14 Monitoring Earthmoving:** Earthmoving will be monitored by a palaeontologic monitor only in those areas of the site where earthmoving will disturb soils greater than five feet deep (monitoring will not be conducted in areas in which soils will be buried but not disturbed). Monitoring will not be implemented until earthmoving has reached a depth of five feet below current grade. Monitoring will consist of visually inspecting freshly exposed rock and debris for larger fossil remains and periodically dry test screening a small (25 pound) sample of rock and debris with a 20-mesh box screen for smaller vertebrate fossil remains. Monitoring will be conducted on a full-time basis. However, if too few or no fossil remains are uncovered by earthmoving in areas underlain by a particular rock unit, based on the professional recommendation of L&L, monitoring can be reduced to half or quarter time, generally, or suspended once 50 percent of earthmoving in the area underlain by the rock unit has been completed. Alternatively, if significant fossil remains are uncovered by earthmoving, based on the professional recommendation of L&L,	City of Menifee Planning Department; Project Paleontologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		monitoring may be increased in areas underlain by the fossil-bearing rock unit, at least in the immediate vicinity of the fossil site.		
	Reduced to below a level of significance	**4.4-15 Large-Specimen Evaluation and Recovery Options** 1) If a large fossil specimen (unable to be picked up easily by hand) is found as a result of monitoring earthmoving and the specimen can be recovered without significantly diverting the monitor from monitoring, earthmoving will be temporarily diverted around the fossil site and the specimen will be evaluated and, if warranted, excavated; covered with a protective plaster-impregnated burlap jacket, if required; and recovered. 2) If necessary and approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite recovery of the specimen and obviate the need for additional personnel, and the construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the specimen. A temporary field number will be assigned to the specimen; the field number, a preliminary field identification, and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will be recorded in the monitor's daily monitoring log; and the field number recorded and the fossil site location plotted on a map of the site. 3) At the end of the day the monitor or (following their next site inspection) the field supervisor will transport the fossil remains and associated data to a laboratory facility for further treatment (see Mitigation Measure 4.4-17). If appropriate, samples of fossil wood will be submitted for carbon-14 dating analysis. 4) If a fossil specimen is found and is sufficiently large that it cannot be recovered without significantly diverting the monitor from monitoring, the fossil site will be flagged with colored survey ribbon to temporarily divert earthmoving around the site, the construction contractor will be advised to avoid the site until further notice (usually less than 2 days), and the paleontologist or field supervisor will	City of Menifee Planning Department; Project Paleontologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		be called to the site. The grading contractor will notify Richland Communities and L&L of the occurrence and of the avoidance of the site. The paleontologist or field supervisor will evaluate the specimen for significance and continuity to determine if recovery is warranted. a. If specimen recovery is not warranted, no further action will be taken to preserve the fossil site or remains, the construction contractor will be allowed to have earthmoving proceed through the site immediately, and Richland Communities will be notified of the decision not to recover the specimen and of authorization for earthmoving to proceed through the fossil site. b. If specimen recovery is warranted, the paleontologist or field supervisor will notify the construction contractor, Richland Communities, and the City of Menifee Community Development Director of the necessity for implementing additional mitigation measures specified in the DC/TP; initiating full-time monitoring, if not already in effect, at least in the immediate vicinity of the site in areas underlain by the fossil-bearing rock unit; and assigning additional personnel to the PRIMP. Within 24 hours after Richland Communities' approval, as secured by L&L, a recovery crew will be mobilized to recover the specimen. The size of the crew will reflect the size of the specimen and the need to recover the specimen as quickly as possible. The specimen will be excavated with hand tools, covered with a protective plaster-impregnated burlap jacket, and recovered. If necessary and approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite recovery of the specimen, reduce any potential construction delay, and obviate the need for additional personnel. The construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the specimen. Richland Communities will be notified of the recovery and of authorization for earthmoving to proceed through the fossil site. A temporary field		

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		number will be assigned to the specimen; the field number, a preliminary field identification, and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will be recorded in the monitor's daily monitoring log; and the field number will be recorded and the fossil site location plotted on a map of the site. The field supervisor and, if necessary, a crew member will transport the fossil specimen and associated site data to a laboratory facility for further treatment (see Mitigation Measure 4.4-17).		
	Reduced to below a level of significance	**4.4-16 Small-Specimen Sample Evaluation, Recovery, and Processing.** If a sufficient number of smaller vertebrate fossil remains are found at one site as a result of test screening by the monitor, the fossil site will be flagged with colored survey ribbon to temporarily divert earthmoving around the site. The construction contractor will be advised to avoid that site until further notice (usually less than two days) and, if requested by the monitor, in order to expedite recovery of a fossiliferous rock sample, reduce any potential construction delay, and obviate the need for additional personnel, the construction contractor will have earth-moving equipment and an operator acquire a rock sample from the fossil site and transport the sample, if possible, to a nearby temporary location at the site approved by the construction contractor. The construction contractor will notify Richland Communities and L&L of the occurrence and of the avoidance of the fossil/storage site. If a sample is recovered, the construction contractor can continue earthmoving through the fossil site immediately after recovery of the sample. The monitor will notify Richland Communities of the recovery of the sample and of authorization for earthmoving to proceed through the fossil site. The paleontologist or field supervisor will be called to the fossil/storage site to determine if the fossil site/sample is sufficiently productive to warrant recovery of a large sample of fossiliferous rock to process for additional small remains. (Previous experience has demonstrated that only some fossil sites require sampling/sample processing, but more than 95 percent of the	City of Menifee Planning Department; Project Paleontologist	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		specimens recovered as a result of some mitigation programs were recovered as a result of sample processing.) 1) If the site/sample is determined too unproductive or the remains too poorly preserved or insufficiently diagnostic, no further action will be taken to preserve the fossil site/sample or remains, the construction contractor will be allowed to continue earthmoving through the fossil/storage site immediately, and Richland Communities will be notified of the decision not to recover/process a sample and of authorization for earthmoving to proceed through the fossil/storage site. 2) If sample recovery is warranted, the paleontologist or field supervisor will notify the construction contractor and the City of Menifee Community Development Director of the necessity for implementing additional mitigation measures specified in the DC/TP and assigning additional personnel to the PRIMP. a. Within 24 hours after approval, a recovery crew will be mobilized to recover the sample. The size of the crew will reflect the need to recover the sample as quickly as possible. The field supervisor will record the size and supervise recovery of the sample. Up to three tons of fossiliferous rock will be recovered. The sample will be excavated with hand tools for recovery. If necessary and if approved by the construction contractor, earth-moving equipment and an operator will be enlisted to expedite transportation of the sample to the processing facility site, obviate the need for additional personnel, and reduce any potential construction delay. The construction contractor will be allowed to have earthmoving proceed through the fossil site immediately after recovery of the sample. The paleontologist or field supervisor will notify Richland Communities of recovery of the sample and of authorization for earthmoving to proceed through the fossil site. b. A temporary field number will be assigned to the sample; the field number and pertinent specimen (field number, identification by taxon and element) and geologic (particularly stratigraphic level within rock unit) and geographic site data (location, elevation) will		

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		be recorded in the monitor's daily monitoring log; and the field number will be recorded and the fossil site location plotted on a map of the site. The field supervisor and, if necessary, a crew member will transport the sample to another location at the site approved by the construction contractor or to an off-site location for initial/field processing (wet screening) of the sample. The total weight of all samples from each fossil-bearing rock unit at the site will not exceed three tons. c. If warranted, the field supervisor will set up a field processing facility for wet screening the sample at a site location approved by the construction contractor. Wet screening will consist of sieving rock through a 20-mesh box screen (and/or finer) immersed in a tub of water to remove the smaller particles (clay and silt) from the larger particles (sand and rock) and small fossil remains. This could result in a reduction in sample weight/volume in excess of 90 percent. If necessary, rock will be soaked in an environmentally safe dispersant (citrus oil) prior to screening to improve separation of the clay particles from the rest of the sample during screening. The monitor will conduct wet screening if it can be accomplished without diverting the monitor from monitoring. If it is not possible to have the monitor perform the wet screening, a field technician will be assigned to the task. Following his next site inspection, the field supervisor will transport the concentrate (larger particles and small fossil remains) generated by initial processing to a laboratory facility for final/laboratory processing. d. If fossil remains in the concentrate are sufficiently fossilized (dense), an environmentally safe heavy liquid (sodium polytungstate), if appropriate, will be used by the senior vertebrate paleontologist to separate the remains from the remaining sand and rock particles. When added to a beaker filled with heavy liquid, the concentrate will separate, the particles floating to the surface, and the remains sinking to the bottom, from where they are retrieved. This technique can result in a further sample weight/volume reduction in excess of		

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		90 percent (less than 1 percent of original sample size). The final concentrate will be examined under a microscope and fossil specimens recovered from any remaining sand and rock particles. If the fossil bone in the original concentrate is not sufficiently dense for use of the heavy-liquid separation technique, the entire sample of concentrate will be sorted under a microscope for fossil remains. Recovered fossil remains will then be treated (see Mitigation Measure 4.4-17). e. During final processing of a sample, the senior vertebrate paleontologist will continually evaluate the results of field and laboratory processing. If the sample is insufficiently productive or the fossil remains are too poorly preserved, the senior vertebrate paleontologist will have the option of discontinuing further laboratory processing of the sample, having field processing of the remainder of the sample suspended, and disposing of the remainder of the sample and unprocessed concentrate. Similarly, processing will be discontinued if, after preliminary identification of some specimens, the remains are determined insufficiently diagnostic or diverse taxonomically, or the species represented are the same as those in another sample from the fossil-bearing rock unit. (Previous experience has demonstrated that only some fossil sites require sample processing, and only some of these sites require processing of an entire three-ton sample.) If appropriate, small splits from one or more samples will be submitted for palynological analysis.		
	Reduced to below a level of significance	**4.4-17 Fossil Treatment.** Final treatment of all fossil specimens recovered from the site as a result of the PRIMP will be conducted at a laboratory facility. Larger vertebrate fossil specimens will be removed from their protective jackets, prepared to the point of identification using hand tools, and hardened or stabilized with a penetrating solution by a preparator. All recovered fossil specimens will be identified to the lowest taxonomic level possible by knowledgeable vertebrate and invertebrate paleontologists and, if required, other knowledgeable paleontologists (e.g., paleobotanists, micropaleontologists, palynologists). The specimens will then be curated (assigned and labeled with museum specimen data and	City of Menifee Planning Department; Project Paleontologist	Upon commencement of grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		corresponding site numbers, placed in specimen trays and, if appropriate, vials with completed specimen data cards); catalogued (specimen and site numbers and specimen data and corresponding geologic and geographic site data, respectively, archived [entered into appropriate catalogs and computerized databases]); and accessioned into the museum fossil collection, where they will be permanently stored, maintained, and, along with associated data, made available for future study by qualified investigators. With the possible exception of tasks that might be conducted by museum staff (curation, cataloging), all treatment of fossil specimens will be conducted by a laboratory technician. Fossil specimen preparation, identification, curation, and cataloguing are now required before a fossil collection will be accepted by most museum repositories, including the WSC. Moreover, the scientific importance of a fossil specimen cannot be evaluated until the specimen has been identified to the lowest taxonomic level possible, and specimen identification often is not possible without prior preparation.		
	Reduced to below a level of significance	**4.4-18 Final Report.** A final technical report of findings will be prepared by the paleontologist and will describe the site's stratigraphy; summarize field and laboratory methods employed during the PRIMP; include a taxonomic list and an inventory of catalogued fossil specimens recovered as a result of the PRIMP; evaluate the scientific importance of the specimens; and discuss the relationship of the fossil assemblage from any newly recorded fossil site at the Project Site to relevant fossil assemblages from fossil sites in other areas. The report will be submitted to the contractor, Richland Communities, and the City of Menifee Community Development Director. Submission of the final report will signify completion of the PRIMP and will ensure Richland Communities' compliance with Public Resources Code Section 21081.6 (mitigation monitoring, reporting, and compliance).	City of Menifee Planning Department; Project Paleontologist	Upon completion of grading activities.
4.1.5 HYDROLOGY, FLOODING, AND DRAINAGE	Reduced to below a level of significance.	Mitigation is not required.	None	None
4.1.6 WATER QUALITY	Reduced to below a level of significance.	**4.6-1** The developer or builder for TTM No. 31194 shall be required, pursuant to requirements of the State Water Resources Control Board, to obtain a NPDES	City of Menifee Engineering and Public Works Department	Prior to the issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		construction permit prior to issuance of grading permits. The NPDES permit will apply to all construction activities associated with the proposed project. Construction activities include clearing, grading, or excavation that results in the disturbance of at least five acres of total land area or activity that is part of a larger common plan of development of one acre or greater. The permit requires the applicant to develop and implement a SWPPP that specifies BMPs to minimize pollutants in stormwater runoff and nonstorm water discharges. Examples of BMPs include but are not limited to installing energy dissipation structures and rip-rap at stormwater discharge points to stabilize flow and reduce velocities; mulching cleared or freshly seeded areas for erosion/sedimentation control; and using geotextiles and mats for erosion control during construction, storm drain inlet/outlet protection for siltation control; and slope drains for erosion control. The permit also requires a monitoring, reporting, and inspection program to be developed and implemented to ensure the effectiveness of the controls.		
	Reduced to below a level of significance	**4.6-2** Prior to approval of a Final Map and final engineering drawings, the City shall verify that the Final Map and engineering drawings indicate the size and location of the structural source control BMPs specified by the project's Water Quality Management Plan.	City of Menifee Engineering and Public Works Department	Prior to approval of Final Map and final engineering drawings.
	Reduced to below a level of significance	**4.6-3** Prior to issuance of occupancy permits, the City shall verify that the project's CC&Rs specify the homeowners association's ownership maintenance requirements for private storm drains and catch basins, as specified in the project's Water Quality Management Plan.	City of Menifee Engineering and Public Works Department	Prior to issuance of occupancy permits.
	Reduced to below a level of significance	**4.6-4** Prior to issuance of occupancy permits, the City shall verify that the project's CC&Rs contain the activity restrictions and the property owner environmental education awareness materials for water quality specified by the Project's Water Quality Management Plan.	City of Menifee Engineering and Public Works Department	Prior to issuance of occupancy permits.
4.1.7 GEOLOGY AND SLOPE STABILITY	Reduced to below a level of significance.	**4.7-1** Prior to the issuance of grading permits and in compliance with the requirements of City ordinances, a detailed geotechnical report(s) shall be submitted to the City's Engineering Division for review and approval. The report(s) shall identify and address site-specific (a) underlying soil conditions, (b) liquefaction potential, (c)	City of Menifee Engineering and Public Works Department	Prior to the issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		seismic parameters and building requirements, and (d) slope stability. The measures recommended by the final geotechnical report(s) shall be identified on applicable grading plans and shall be implemented to the satisfaction of the City Geologist.		
	Reduced to below a level of significance	**4.7-2** All earthwork and grading shall be performed in accordance with all applicable requirements of Chapter 8.26, Grading Regulations, of the Menifee Municipal Code, in addition to the provisions of the 2021 International Building Code. Grading shall also be performed in accordance with applicable provisions of the Standard Grading Specifications in the geotechnical reports prepared by Leighton and Associates (see Appendix G).	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.
	Reduced to below a level of significance	**4.7-3** The project geotechnical engineer or qualified representative shall be notified at appropriate times to provide observation and testing services during clearing operations and to verify compliance with the recommendations made by the project geotechnical reports. In addition, any buried structures or unusual or adverse soil conditions encountered that are not described or anticipated in the project's geotechnical reports shall be brought to the immediate attention of the geotechnical consultant.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.
	Reduced to below a level of significance	**4.7-4** All existing low-density and potentially collapsible soil materials, such as loose manmade fill and alluvium, shall be removed to underlying competent bedrock from each area to receive compacted fill. Prior to placing structural fills, the exposed bottom surfaces in each removal area shall first be scarified to a depth of 6 inches or more, watered or air-dried as necessary to achieve near-optimum moisture conditions, and then recompacted in-place to a minimum relative compaction of 90 percent. Actual depths and horizontal limits of any removals shall be determined during grading on the basis of in-grading observations and testing performed by the project geotechnical consultant and/or engineering geologist.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities and prior to the issuance of building permits.
	Reduced to below a level of significance	**4.7-5** In the event import soils are needed to achieve final design grades, all potential import materials shall be free of deleterious/oversize materials, non-expansive, and approved by the project geotechnical consultant prior to commencement of delivery onsite.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Reduced to below a level of significance	**4.7-6** An observation of clearing operations, removal of unsuitable surficial materials, and general grading procedures shall be performed by the project geotechnical consultant or his/her representative. Fill shall not be placed without prior approval from the geotechnical consultant. The project geotechnical consultant or his/her representative shall also be present on-site during all grading operations to verify proper placement and adequate compaction of all fill materials, as well as to verify compliance with the other recommendations presented in the project geotechnical reports.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.
	Reduced to below a level of significance	**4.7-7** No oversized rock (greater than 12 inches) shall be place within 10 feet of the finished grade.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.
	Reduced to below a level of significance	**4.7-8** Cut-and-fill slopes steeper than 3:1 (horizontal: vertical) and exceeding a vertical height of 30 feet shall be constructed with drainage terraces.	City of Menifee Engineering and Public Works Department	Concurrent with grading activities.
4.1.8 SOILS, SLOPES AND EROSION POTENTIAL	Reduced to below a level of significance.	**4.8-1** Prior to the issuance of a grading permit, an overall Conceptual Grading Plan shall be submitted for City of Menifee Engineering and Public Works Department approval. The Grading Plan shall include: 1) techniques employed to prevent erosion and sedimentation during and after the grading process; 2) approximate time frames for grading; 3) identification of areas which may be graded during high probability rain months (January through March); and 4) preliminary pad and roadway elevations.	City of Menifee Engineering and Public Works Department	Prior to the issuance of grading permits.
	Reduced to below a level of significance.	**4.8-2** Where cut-and-fill slopes are created higher than three feet, detailed landscaping and irrigation plans shall be submitted to the City of Menifee Planning Department or City of Menifee Engineering and Public Works Department prior to Grading Plan approval. The plans shall be reviewed for type and density of ground cover, shrubs, and trees to ensure that plant material would be effective as erosion control and that all slopes would be landscaped per the City's Development Code.	City of Menifee Planning Department or City of Menifee Engineering and Public Works Department	Prior to issuance of grading permits.
	Reduced to below a level of significance	**4.8-3** All grading procedures shall be in compliance with the Chapter 8.26, of the City's Development Code, including requirements for erosion control during rainy months.	City of Menifee Engineering Division.	Prior to issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		The requirements for compliance with the City's Site Development Regulations and Performance Standards shall be noted on all grading plans.		
	Reduced to below a level of significance	**4.8-4** Graded, but undeveloped land shall be maintained weed-free and planted with interim landscaping within 90 days of completion of grading, unless building permits are obtained.	City of Menifee Engineering and Public Works Department	Upon completion of grading activities.
	Reduced to below a level of significance	**4.8-5** Prior to any grading activities, a soils report and geotechnical study shall be performed to further analyze on-site soil conditions and slope stability and shall include the appropriate measures to control erosion.	City of Menifee Engineering and Public Works Department	Prior to issuance of grading permits.
	Reduced to below a level of significance	**4.8-6** Potential brow ditches, terrace drains, or other minor swales determined necessary by the City of Menifee at future stages of project review, shall be lined with natural erosion control materials or concrete.	City of Menifee Engineering and Public Works Department	Prior to the issuance of grading permits.
	Reduced to below a level of significance	**4.8-7** The locations of potentially compressible soils shall be identified on all Grading Plans. Where development is proposed in areas of compressible soils, deep foundation systems shall be used, or compressible soils shall be completely over excavated and compacted.	City of Menifee Engineering and Public Works Department	Prior to the issuance of grading permits.
4.1.9 AGRICULTURE	Reduced to below a level of significance.	**4.9-1** The project shall comply with the County's "Right to Farm" Ordinance (Ordinance No. 625). The ordinance is intended to provide for a means of giving notice to prospective buyers of homes in newly built subdivisions and recently subdivided parcels that they are moving into an agricultural area and that a farm has been in operation legally for at least three years shall not be or become a nuisance simply because residential uses have entered the area and are offended by the odors, dust, etc.	City of Menifee Planning Department	Prior to issuance of occupancy permits.
4.1.10 MINERAL RESOURCES	Not significant.	Mitigation is not required.	None	None

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.1.11 TOXIC SUBSTANCES	Reduced to below a level of significance.	**4.11-1** Users of household hazardous materials such as paints, roofing materials and solvents during construction shall comply with applicable federal, state, and local regulation requiring elimination and reduction of waste at the source by prevention of leakage, by segregation of hazardous waste, and by process of materials change.	Riverside County Department of Environmental Health	Prior to the issuance of building permits.
	Reduced to below a level of significance	**4.11-2** All site improvements not removed from the property by the current owner shall be disposed of offsite, in accordance with current local, state, and federal disposal regulations. Any petroleum contaminated materials, lead-based paints or products, mercury, asbestos containing materials and/or buried trash/debris encountered during removal and/or grading shall be evaluated by an experienced environmental consultant prior to removal.	Riverside County Department of Environmental Health	Prior to the issuance of grading permits.
	Reduced to below a level of significance	**4.11-3** In the event that any subsurface hazardous materials, including soil and/or groundwater contamination, are found during grading or construction, all activity in the area of discovery and/or in an appropriate radius of the area of discovery shall temporarily cease and the County of Riverside Environmental Health Department shall be notified prior to the resumption of any construction activity in the area of discovery, the site shall be deemed safe by the appropriate entity prior to the resumption of grading and/or constructions activities.	Riverside County Department of Environmental Health	Concurrent with grading and construction activities.
	Reduced to below a level of significance	**4.11-4** If soil is to be imported or exported to or from the site during grading or other construction activities, the transported soil it shall be sampled for contaminants assessed prior to proposed off-site use or disposal. Imported soil shall be free from contamination. Exported soil, if contaminated, shall be and handled in accordance with prevailing environmental laws and regulations, including Land Use Disposal Restrictions, if applicable.	Riverside County Department of Environmental Health	Concurrent with grading and construction activities.
	Reduced to below a level of significance	**4.11-5** Prior to the issuance of grading permits, soil sampling shall occur to identify levels of methane, pesticides, herbicides, fertilizer, and other agricultural chemicals. Methane and chemical levels shall be verified to be within allowable limits as regulated by prevailing environmental laws and regulations prior to the issuance of building permits.	Riverside County Department of Environmental Health	Prior to the issuance of grading and building permits.

Appendix B. 2022 EIR Addendum - Mitigation Monitoring and Reporting Program

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
4.1.12 CIRCULATION AND TRAFFIC	Reduced to below a level of significance	**4.12-1** Wickerd Road shall be constructed from the easterly project boundary to the westerly project boundary to align with Garbani Road at its ultimate full-section width as a Major roadway.	City of Menifee Engineering and Public Works Department	Prior to issuance of building and occupancy permits
	Reduced to below a level of significance	**4.12-2** Garbani Road shall be constructed as a paved two- lane extension from Evans Road to the westerly project to provide site access with a minimum of a 32 foot pavement section.	City of Menifee Engineering and Public Works Department	Prior to issuance of building and occupancy permits
	Reduced to below a level of significance	**4.12-3** Wickerd Road shall be constructed as a paved two- lane extension from the easterly project boundary to Haun Road to provide site access with a minimum of a 32 -foot pavement section.	City of Menifee Engineering and Public Works Department	Prior to issuance of building and occupancy permits
	Reduced to below a level of significance	**4.12-4** Internal roadways shall be constructed as Collector Roadways in accordance with the City of Menifee Public Works Department standards.	City of Menifee Engineering and Public Works Department	Prior to issuance of building and occupancy permits
	Reduced to below a level of significance	**4.12-5** On-site traffic signing and striping shall be implemented in conjunction with detailed construction plans for the project site.	City of Menifee Engineering and Public Works Department	Concurrent with project implementation.
	Cumulatively significant impacts to freeway mainline segments.	**4.12-6** Sight distance at each project access roadway shall be reviewed with respect to standard City of Menifee sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.	City of Menifee Engineering and Public Works Department	Concurrent with project implementation.
4.1.13 AIR QUALITY	Reduced to below a level of significance	**Construction Activities** **4.13-1** Prior to the issuance of grading permits, the owner/permittee shall submit an accelerated construction dust abatement management program to the City of Menifee. This involves developing a dust control program to supplement the routine watering that constitutes best available control measures (BACM) in excess of any minimum SCAQMD Rule 403 requirements. BACMs that may be adopted and integrated into an enhanced dust control program might include hydroseeding previously disturbed areas while awaiting construction, adding chemical binders or surfactants to increase the effectiveness of watering, and/or early paving or chip	City of Menifee Building and Safety Department; South Coast Air Quality Management District	Prior to the issuance of grading permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		sealing of roads. Soil disturbance should be terminated when high winds (>25 mph) make dust control extremely difficult.		
	Reduced to below a level of significance	**4.13-2** The project applicant/contractor shall reduce "spill- over" effects by preventing soil erosion, washing dirt from vehicles entering public roadways, and washing/sweeping project access to public roadways on a regular schedule.	City of Menifee Building and Safety Department	Concurrent with grading and construction activities.
	Reduced to below a level of significance	**4.13-3** All trucks hauling dirt, sand, soil, or other loose materials are to be covered or shall maintain at least two feet of freeboard (i.e., minimum vertical distance between top of the load and the top of the trailer) in accordance with the requirements of California Vehicle Code Section 23114.	City of Menifee Building and Safety Department	Concurrent with grading and construction activities.
	Direct and cumulatively significant and unmitigable: NOx (construction equip. exhaust) VOC (arch. surface coatings)	**Construction Emissions (NOx)** **4.13-4**(A) Prior to construction commencement for each phase of the proposed development, emissions control from on-site equipment through a routine mandatory program of low emissions tune-ups shall be required. (B) Electric or natural gas powered construction equipment shall be used as feasible as determined by the construction superintendent. Diesel-powered (C) During construction, electricity should be used from power poles instead of from portable generators as feasible as determined by the construction superintendent.	City of Menifee Building and Safety Department	Prior to commencement of grading and construction activity phases.
	Direct and cumulatively significant and unmitigable: NOx (construction equip. exhaust) VOC (arch. surface coatings)	**Volatile Organics (VOC)** **4.13-5**The application of architectural surface treatments (i.e., paint, etc.) shall be limited to 100 gallons per day over the project buildout lifetime using the most currently required low-VOC paint (100 grams or less of VOC per liter) and high pressure-low volume (HPLV) paint applicators.	City of Menifee Building and Safety Department	Concurrent with construction activities.
4.1.14 NOISE	Reduced to below a level of significance.	**Short-Term Construction Impacts** **4.14-1**Construction activities shall comply with Menifee Municipal Code Section 8.01.101relating to construction noise.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Reduced to below a level of significance.	**4.14-2** Construction shall be restricted to the hours of 6:30 am to 7:00 pm weekdays and Saturdays.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-3** If blasting, drilling or rock crushing occur within 800 feet of any occupied residence, temporary noise barriers (berms, walls, etc.) shall be erected to mitigate noise from these activities to an exterior noise level of 65 dB(A) or less at the nearest residential lot line.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-4** Prior to any blasting operations, all residences within 800 feet of any potential blast location shall be notified in writing of the blasting schedule, and again within a minimum of 72 hours in advance of blasting.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-5** All construction vehicles or equipment, whether fixed or mobile, shall be equipped with properly operating and maintained mufflers.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-6** Stockpiling and/or vehicle staging areas shall be located as far as practical from occupied residences.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**Long-Term Potential Noise Impacts** **4.14-7** Prior to the issuance of occupancy permits for affected lots, solid barriers (walls, berms or a combination thereof) shall be provided in the following locations: a. 7.5-foot-high masonry block walls or combination berm and block wall shall be constructed along Lots 61-63 and 72-84 of TTM 31194-1 on Wickerd Road. b. 7-foot-high masonry block walls or combination berm and block wall shall be constructed along Lots 3-4, 15-16, 24-25, 31-32, of TTM 31194-1, Lots 1, 3-7 of TTM 31194-2 and Lots 1-4, 114-138 and 251-259 of TTM 31194-4 on Wickerd Road. c. 6-foot-high masonry block wall/privacy wall or combination berm and block wall shall be constructed along Lots 31-43 of TTM 31194-3 on Evans Road.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		d. Corner Wrap Around and Open Space Lots. Masonry block walls or combination berm and block wall shall be constructed along those lots along Wickerd Road that have been identified in the County's review of the acoustical analysis. The height shall be determined by the adjacent wall height. These walls shall be erected so that the top of each wall extends at least 6 to 7.5 feet (depending on location) above the pad elevation of the shielded lot. In cases where the road is elevated above the pad, the wall shall extend at least 6 to 7.5 feet (depending on location) above the highest point between the homes and the road. Final noise barrier heights shall be determined when final grading plans show lot location, precise road, and pad elevations.		
	Reduced to below a level of significance.	**4.14-8** Mechanical ventilation (e.g. air conditioning) shall be provided for all homes located adjacent to Wickerd Road and Evans Road.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-9** Upgraded windows with a Sound Transmission Class (STC) rating 30 or higher shall be installed in all homes located adjacent to Wickerd Road.	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-10** To minimize the potential interior noise impacts, homes facing Wickerd Road and Evans Road should be provided with weather-stripped solid core exterior doors and exterior wall/roof assembles free of cut-outs and openings	City of Menifee Building and Safety Department	Concurrent with grading and building permits.
	Reduced to below a level of significance.	**4.14-11** Prior to issuance of building occupancy permits, the applicant shall provide the City of Menifee Building and Safety Department with an interior acoustical report for review and approval. The report must demonstrate that the interior noise of those homes along Wickerd Road and Evans Road has been reduced to at or below 45 Ldn.	City of Menifee Building and Safety Department	Prior to issuance of occupancy permits. Concurrent with construction activities.
4.1.15 OPEN SPACE, PARKS, AND RECREATION	Not significant.	Mitigation is not required.	None	None
4.1.16 FIRE PROTECTION	Reduced to below a level of significance.	**4.16-1** In accordance with Riverside County Subdivision Ordinance 460, fire flows shall have 1000 gallons per minute at 20 psi residual pressure.	Riverside County Fire Department	Prior to the issuance of building permits or water improvement plans.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Reduced to below a level of significance.	**4.16-2** All water mains and fire hydrants shall be constructed in accordance with Ordinance 460. Hydrant spacing at each intersection shall be no more than 330 feet apart.	Riverside County Fire Department	Prior to the issuance of building permits or water improvement plans.
	Reduced to below a level of significance.	**4.16-3** Disclosures of potentially damaging wildfires in the area must be disclosed to future homebuyers by the seller as part of the buyer disclosure statements prior to purchase as required by the California Civil Code.	Riverside County Fire Department	Prior to the issuance of occupancy permits.
	Reduced to below a level of significance.	**4.16-4** Prior to issuance of the grading permits, a fire protection/vegetation management plan shall be prepared and submitted to the Fire Department for review and approval.	Riverside County Fire Department	Prior to the issuance of grading permits.
	Reduced to below a level of significance.	**4.16-5** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City Development Impact Fee (DIF) Ordinance (Ord. No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including fire protection facilities.	Riverside County Fire Department	Prior to the issuance of occupancy permits.
4.1.17 POLICE SERVICES	Reduced to below a level of significance.	**4.17-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City's Development Impact Fees (DIF) Ordinance (Ord. No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including police protection facilities.	Riverside County Planning Department	Prior to the issuance of building permits.
	Reduced to below a level of significance.	**4.17-2** The project applicant shall inform the Problem Oriented Policing (POP) Unit of the City of Menifee's Police Department of all new homeowners associations. These associations may be used as the foundation for establishing Neighborhood Watch Programs.	City of Menifee Police Department	Prior to the issuance of occupancy permits
4.1.18 SOLID WASTE	Reduced to below a level of significance.	**4.18-1** The refuse hauler for the Project Site shall be advised of the efforts the developer will be pursuing relating to recycling and waste reduction (e.g., curbside recycling) in accordance with Chapter 6.30, Solid Waste Disposal and Organic Waste Diversion, of the Menifee Municipal Code. The use of such programs would be encouraged by the developer through information (location, materials accepted, etc.) provided in sales literature.	City of Menifee Engineering and Public Works Department	Prior to the issuance of occupancy permits

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
	Reduced to below a level of significance.	**4.18-2** The project applicant shall participate in established citywide programs to reduce solid waste generation.	City of Menifee Engineering and Public Works Department	Prior to the issuance of occupancy permits.
	Reduced to below a level of significance.	**4.18-3** The master Homeowners' Association and/or landscape maintenance district or association shall either mulch (shred and leave on landscaped areas), compost on-site, or separate from other types of waste to send to a composting facility within the local area, green waste (i.e., trimmings from grass, shrubs, or trees) from common project landscaped areas and the community park.	City of Menifee Engineering and Public Works Department	Prior to the issuance of occupancy permits.
	Reduced to below a level of significance.	**4.18-4** The project developer shall pursue and implement any available and feasible source reduction programs for the disposal of construction materials to the satisfaction of the City of Menifee's Solid Waste and Recycling Department.	City of Menifee Engineering and Public Works Department	Prior to the issuance of occupancy permits.
	Reduced to below a level of significance.	**4.18-5** The project applicant shall comply with the State Model Ordinance, which requires adequate areas for the collection and loading of recyclable materials to be provided within detached, single family residential areas where solid waste is collected and loaded in a location which serves five or more units.	City of Menifee Engineering and Public Works Department	Prior to the issuance of building permits.
4.1.19 WATER AND WASTEWATER SERVICES	Not significant.	Mitigation is not required.	None	None
4.1.20 SCHOOLS	Reduced to below a level of significance.	**4.20-1** Prior to the issuance of each residential building permit(s), school fees shall be paid in accordance with the requirements of the State of California (Senate Bill 50) or the applicant shall enter into a mitigation agreement with the Menifee Union School District and the Perris Union High School District.	Menifee Union School District; Perris Union High School District	Prior to the issuance of building permits.
4.1.21 LIBRARIES	Reduced to below a level of significance.	**4.21-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City Development Impact Fee (DIF)(Resolution No. 17-232), which requires a fee payment that the City applies to the funding of public facilities, including library facilities.	City of Menifee Planning Department	Prior to the issuance of building permits.
4.1.22 HEALTH CARE SERVICES	Reduced to below a level of significance.	**4.22-1** Prior to the issuance of occupancy permits, the applicant shall comply with the provisions of the City Development Impact Fee (DIF)(Resolution No. 17-232), which	City of Menifee Planning Department	Prior to the issuance of building permits.

IMPACTS	LEVEL OF SIGNIFICANCE AFTER MITIGATION	MITIGATION MEASURES	RESPONSIBLE PARTY / MONITORING PARTY	IMPLEMENTATION STAGE
		requires a fee payment that the City applies to the funding of public facilities, including public health facilities.		
4.1.23 ENERGY RESOURCES	Not significant.	Mitigation is not required.	None	None
4.1.24 UTILITIES	Not significant.	Mitigation is not required.	None	None

Report Summary:

The Project site is in the area covered by the MSHCP but is not in the Criteria Area. The site is mainly agricultural land and disturbed/ruderal areas with some coastal scrub, chaparral, and scattered riparian vegetation. One sensitive vegetation community is present, arroyo willow thickets. No listed plant species observed. Two special status plants, long-spined spineflower and southern California black walnut observed. One immature coast live oak and other trees present. Coastal California gnatcatcher present and nesting on the site. White-tailed kite observed foraging but no nesting. No vernal pools or fairy shrimp habitat. Riparian birds considered absent. Several special status wildlife species observed. One burrowing owl and occupied burrow observed in 2018 but not present in 2021. A preconstruction survey is required. Habitat suitable for nesting birds is present and preconstruction clearance survey and avoidance buffers recommended during the nesting season. Site is not within a wildlife corridor. Jurisdictional and MSHCP riparian/riverine areas present. Regulatory permits and a DBESP required.

MANAGEMENT SUMMARY

L&L Environmental, Inc. (L&L) conducted biological surveys on Richland Communities' ±204.65-acre Golden Meadows Project site (and associated offsite improvement areas of ±4.68 acres) in the City of Menifee, California. The Project consists of construction of 572 single-family residential lots and associated roads and infrastructure. A blue-line stream runs through the site and the Project includes an Avoidance Area along the stream that will retain native habitat and natural flows. Open space will also be retained in the northeast corner of the site. An Environmental Impact Report (EIR) for the Project was published in 2006.

L&L has performed biological surveys on this property since 2003. The purpose of this study was to examine the site to determine presence/absence of biological resources on the property and potential for special status species to occur, as well as update previous survey results. Surveys in 2021 included a biological resources assessment/habitat assessment, focused botanical survey, protocol breeding season burrowing owl survey, nesting raptor survey, and riparian bird habitat assessment. This study reflects the most current field conditions and, where appropriate, makes comparative statements regarding past observed conditions.

The site is within the area covered by the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP requires habitat assessments, and focused surveys if suitable habitat is present, for riparian/riverine resources and associated species and burrowing owl (*Athene cunicularia*). There is one area of Public/Quasi-Public (PQP) Conserved Lands approximately 0.68 miles north-northeast of the site, identified as the Ringing Rock Archaeological Site. Other than the Ringing Rock Site, there are no PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

The site consists mainly of cultivated agricultural fields (dry-farmed wheat) and disturbed/ruderal areas with some areas of disturbed to relatively undisturbed California buckwheat scrub and chamise chaparral. The ephemeral blue-line stream runs through the agricultural fields and includes scattered and degraded riparian vegetation (arroyo willow thickets and mulefat thickets). Arroyo willow thicket is a sensitive vegetation community. No vernal pools or ponding areas were observed.

Land use adjacent to the site includes anthropogenic disturbances such as rural residential development, agricultural areas, unimproved roads, powerline easements, off-highway vehicle (OHV) activity, and trash dumping.

No state or federally listed threatened or endangered plant species were observed on the site. Two (2) special status plant species were observed, southern California black walnut (*Juglans californica*) and long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*). Five (5) black walnut trees are present within the riparian area on the site. Two long-spined spineflower plants were present in 2017 but the species has not been observed during subsequent surveys. Both of these species are covered under the MSHCP and considered adequately conserved. No other special status plants were observed onsite during previous or current surveys, but three (3) species have a low to moderate or moderate potential to occur: smooth tarplant (*Centromadia pungens ssp. laevis*), Parry's spineflower (*Chorizanthe parryi var. parryi*), and small-flowered morning-glory (*Convolvulus simulans*). All of these species are covered under the MSHCP and considered adequately conserved.

There is a single immature coast live oak tree and a number of other native and non-native trees on the site, mainly in the riparian area. The City may regulate removal or replacement of trees and a tree survey may be required.

Previous and current surveys have documented coastal California gnatcatchers (*Polioptila californica californica*) present on the Project site and nesting has been observed. This species is federally listed as threatened. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Under the MSHCP, focused surveys for this species are not required.

Two white-tailed kites (*Elanus leucurus*) were observed on the Project site in 2005 and one in 2011, but this species has not been observed on the site during more recent surveys. This species is fully protected in California. The EIR includes a mitigation measure (4.3-5) requiring a nesting raptor survey prior to issuance of grading permits and a CDFW Incidental Take Permit (2080 permit) if white-tailed kite are documented as nesting on the Project site. The California Natural Diversity Database (CNDDB) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the Project site but no white-tailed kite nesting has been observed onsite. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

No vernal pools, ponding areas, or potential habitat for fairy shrimp were observed. The riparian vegetation on the site is scattered and degraded and there is no suitable habitat for least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), or western yellow-billed cuckoo (*Coccyzus americanus occidentalis*).

Two other listed species have a moderate or high potential to occur on the Project site, although they have not been observed: Stephens' kangaroo rat (*Dipodomys stephensii*) and tricolored blackbird (foraging) (*Agelaius tricolor*). Both of these species are covered under the MSHCP and considered adequately conserved. Under the MSHCP, focused trapping surveys for Stephens' kangaroo rat are not required.

Habitat suitable for use by burrowing owl is present on much of the property but is regularly disturbed by agricultural activities. There were no observations of burrowing owls during biological surveys of the site in 2003, 2004, 2005, 2006, 2011, 2013, and 2017. Surveys in 2018 observed one burrowing owl and an active burrow. The owl was observed during the survey on May 30, 2018 but was not observed during subsequent surveys. Focused surveys in 2019 and 2021 did not detect any burrowing owl, occupied burrows, or owl sign. A preconstruction clearance survey for burrowing owl (valid for 30 days) will be required.

Other special status wildlife species have observed on the site during previous and current surveys: coast horned lizard (*Phrynosoma blainvillii*), orange-throated whiptail (*Aspidoscelis hyperythra*), coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*), Cooper's hawk (*Accipiter cooperii*), northern harrier (*Circus hudsonius*), California horned lark (*Eremophila alpestris actia*), great egret (*Ardea alba*), great blue heron (fly over) (*Ardea herodias*), Lawrence's goldfinch (*Spinus lawrencei*), loggerhead shrike (*Lanius ludovicianus*), California thrasher (*Toxostoma redivivum*), southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*), Bell's sage sparrow (*Artemisiospiza belli belli*), Nuttall's woodpecker (*Dryobates nuttallii*), wrentit (*Chamaea fasciata*), Costa's hummingbird (*Calypte costae*), rufous hummingbird (*Selasphorus rufus*), and San Diego black-tailed jackrabbit (*Lepus californicus bennettii*).

All of these species are covered under the MSHCP and considered adequately conserved except great egret, Lawrence's goldfinch, California thrasher, Nuttall's woodpecker, wrentit, Costa's hummingbird, and rufous hummingbird, which are not covered under the MSHCP.

Five (5) additional special status wildlife species have not been observed on the Project site during surveys but have a low to moderate potential to occur: Crotch bumble bee (*Bombus crotchii*), southern California legless lizard (*Anniella stebbinsi*), Dulzura pocket mouse (*Chaetodipus californicus femoralis*), northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*), and western mastiff bat (foraging) (*Eumops perotis californicus*). Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP. Crotch bumble bee was previously

a candidate for state listing, but its status is currently in litigation. If this species becomes listed, focused surveys and incidental take permitting may be required.

Nesting birds are protected under State and federal laws and habitat suitable for nesting birds (including raptors) is present within and around the site. Scheduling Project activities outside the nesting season (generally February 1 through August 31) or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended. If nesting birds are present, an avoidance buffer of 300 to 500 feet (or as recommended by a biologist) should be established around active nests until juvenile birds have fledged and/or a biologist has verified that the nest has become inactive.

The Project site is largely surrounded by scattered existing development and there is no connectivity between the site and conserved lands to the east (Diamond Valley Lake) and southwest (Santa Rosa Plateau, Cleveland National Forest). Although there may be limited local movement of wildlife across the site, it is not within or adjacent to a wildlife corridor.

An ephemeral blue-line stream is present on the site and includes state waters and wetlands, federal waters, and MSHCP riparian/riverine habitat. All jurisdictional areas onsite will either be impacted by development or incorporated into the Avoidance Area. The Avoidance Area will retain native riparian habitat and natural flows. Regulatory permits from the U.S. Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW) will be required for impacts to jurisdictional areas. A Determination of Biologically Equivalent or Superior Preservation (DBESP) will be required for impacts to MSHCP riparian/riverine habitat.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

1.0) INTRODUCTION

This report was prepared by L&L Environmental, Inc. (L&L) for Richland Communities. It describes the results of biological surveys conducted on a proposed residential development site located within the City of Menifee, Riverside County, California. The Project site consists of Assessor's Parcel Numbers (APNs) 360-300-002, -003, -004, -005, -006, -009, and 360-350-001 (totaling ±204.65 acres) and portions of APNs 360-180-009, 360-300-001, -008, 360-350-019, -022, -023, -024, 360-360-009, -010, -011, and 360-380-004 where offsite improvements are planned (totaling ±4.68 acres).

The 2021 updated assessment consisted of (1) a records search and literature review, conducted to determine the species of concern in the Project area and proximity to closest documented special status species observations, (2) field surveys to identify plants and wildlife on the site and assess presence/absence of habitat for species of concern, (3) a focused botanical survey, (4) a protocol breeding season survey for burrowing owl, and (4) a habitat assessment for riparian birds.

1.1) Project Description

The Project is identified as Golden Meadows (formerly known as Menifee Assemblage), Tract No. 31194, and consists of construction of 572 single-family residential lots and associated roads and infrastructure (Figure 3b). The Project will be constructed in four (4) phases. Offsite impacts include improvements to existing roads and installation of flood control structures. The site plan is provided in Appendix E. An Environmental Impact Report for the Project was published in 2006 (T&B 2006).

The property also includes an Eastern Municipal Water District (EMWD) tank site. The proposed tank site includes two large water tanks and an access road. The tanks will serve multiple developments, including Golden Meadows. The tank site is located within the tract boundary, but it is not within the proposed Project boundary and is not a part of the Project.

The Project includes an Avoidance Area along the blue-line stream that retains native habitat and natural flows. Open space will also be retained in the northeast corner of the site.

1.2) Location

The site is located in Paloma Valley, west of the Interstate 215 freeway (I-215), south of Newport Road, and east of Murrieta Road (Figure 1). It is located between Wickerd Road to the south and Garbani Road to the north. The site is situated in Sections 15 and 16, Township 6 South, Range 3 West, within the USGS *Romoland* 7.5' series quadrangle map (Figure 2).

The site is generally bounded as follows: to the west by agricultural lands, Evans Road (unimproved), rural residential areas, and a school; to the east by a mixture of disturbed and relatively undisturbed vacant land, Sherman Road (unimproved), and a Frontier Communications building complex and Haun Road beyond; to the north by a mixture of disturbed and relatively undisturbed vacant lands, rural residential areas, Garbani Road (unimproved), and residential developments; and to the south by Wickerd Road (unimproved), and a mix of disturbed and relatively undisturbed vacant lands and rural residential areas (Figure 3a).

1.3) Vegetation and Setting

A review of historical aerial images (NETRonline 2021, Google Earth 2021) finds that most areas of the site have been disturbed in association with agricultural uses since at least 1938. These areas are still under cultivation and do not support native habitat communities. Areas of California buckwheat scrub are present in the less disturbed areas on the property, mainly the slopes in the northeastern corner. Remnants of chamise chaparral are present along the southern site boundary.

An ephemeral drainage feature and mapped blue-line stream is present trending from the southwest/central to the northwest portion of the site, as well as various other jurisdictional features. Much of this area has been impacted by agricultural activities and invasive plants, but limited areas of disturbed and degraded riparian vegetation are present in association with this drainage. No vernal pools or ponding areas were observed onsite.

Land use adjacent to the site includes anthropogenic disturbances such as rural residential development, agricultural areas, unimproved roads, powerline easements, OHV activity, and trash dumping.

Two (2) unimproved roads are present on the property. The first is an unnamed dirt road that begins at the eastern terminus of Daniel Road (in the northwestern corner of the site) and exits at the southeastern corner of the site near the intersection of Wickerd Road and Ascot Way. The second is identified as Krubsack Road, which runs north-south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north. Many OHV trails are also present on the property, mainly in the northeastern corner. The 2021 survey found that earthen berms and rock piles had recently been placed on roads and trails to block entrance to the site.

1.4) Soils and Topography

Soils on the Project site were mapped as Wyman loam (WyC2), Vallecitos loam (VeC2), Porterville clay (PsC), Yokohl loam (YbC and YbE3), Cajalco fine sandy loam (CaC2 and CaD2), Cajalco rocky fine sandy loam (CbF2), Honcut sandy loam (HnC and HnD2), Las Posas loam (LaD2), and Las Posas rocky loam (LkD2 and LkF3) (NRCS 2021) (Figure 4).

The most common soils mapped for the subject property are Wyman loam on the central and western portion of the site (in agricultural areas) and Las Posas rocky loams on vegetated

hillsides within the northern and eastern portions of the site. Clay soils are relatively uncommon on the site, but Porterville clay is mapped as present near the southeastern portion of the property. Soils observed onsite range from mostly sandy-loamy within the agricultural areas to rocky loamy on the vegetated hillsides. Cryptobiotic crusts are present, but only within less disturbed portions of the site.

Topographically, much of the site is relatively flat and contains open land with low-relief rocky outcrops. Gently to steeply sloping hills and ridgelines are present within the northeastern portion of the property. The site has a combined maximum vertical relief of roughly 220 feet (67 meters) between the highest and lowest points on the property, with elevation ranging from approximately 1,500 to 1,720 feet (457 to 524 meters) above mean sea level (AMSL).

2.0) METHODS AND PERSONNEL

2.1) Literature Review

Certain plants and animals have been listed as threatened or endangered under state or federal Endangered Species Acts. Other species have not been formally listed, but declining populations or habitat availability are reasons for concern regarding their long-term viability. These species are included in lists compiled by resource management agencies or conservation organizations. In this report, the term "listed" refers to all species that are listed, or candidates for listing, as threatened or endangered by the U.S. Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW). "Special status species" refers to all species included in one or more compendia of rare species, but not listed as threatened or endangered by USFWS or CDFW.

Pertinent literature was reviewed to identify local occurrences and habitat requirements of special status species and communities occurring in the region. Literature reviewed included compendia provided by resource agencies (CDFW 2021a, 2021b), a search of the California Natural Diversity Database (CNDDB; CDFW 2021c) and California Native Plant Society Inventory of Rare and Endangered Plants (CNPS 2021) for the Project topographic quadrangle (Romoland) and adjacent quadrangles (Steele Peak, Perris, Lakeview, Lake Elsinore, Winchester, Wildomar, Murrieta, and Bachelor Mountain), and a search of USFWS Information for Planning and Consultation (IPaC; USFWS 2021a) for the Project site. Reports of previous surveys completed for the site (L&L 2003-2019) were also reviewed. Information from past surveys is summarized and included in this report as appropriate.

Potentials for occurrence of plant and wildlife species were evaluated and classified as either absent, not expected, low, moderate, high, or occurs. These classifications are based on the presence and quality of habitat, geographic and elevation range of species, proximity to a known occurrence of a species obtained from CNDDB or other reliable data, and field observations. Classifications for individual species may be modified based on biologists' experience and expert opinion.

Scientific names of plants follow Baldwin et al. (2012) with updates from the online Jepson eFlora (Jepson 2021). Scientific names of animals follow Stebbins (1985), Jameson and Peeters (1988), Cornell (2021), and Arnett (2000), with updates from academic sources. Current conservation status of plant and wildlife species determined from CDFW (2021a,

2021b). Vegetation community classifications follow Sawyer et al. (2009) with updates from CDFW (2020). State ranks (S ranks) for vegetation communities are from CDFW (2020). Other sources consulted for information regarding biological resources include Brown (1994), Recon (1985), Schoenherr (1990), and Small (1994).

In this report, the "Project site" or "site" includes all of the Project parcels (±204.65 acres) plus offsite impact areas (±4.68 acres) for a total of ±209.33 acres surveyed. Acreages are based on GIS calculations.

2.2) General Biological and Botanical Survey Methods

L&L biologist Guy Bruyea visited the Project site from May through November of 2021 to conduct general biological and botanical surveys (Table 1).

Table 1. General Biological and Botanical Survey Dates and Weather Conditions

Date	Time	Weather	Wind (mph)
05.21.2021	0545-0845	Clear, 50-56º F	1-6

05.25.2021	0530-0830	Clear, 57-65º F	0-1
05.31.2021	0530-0830	Marine layer/Clear, 61-73º F	0-4
05.31.2021	1700-1930	Clear, 74-82º F	2-4
06.05.2021	0600-1100	Clear, 74-83º F	0-2
06.07.2021	0600-1000	Clear, 58-67º F	0-3
07.06.2021	0600-0900	Clear, 66-75º F	0-2
07.11.2021	0600-0830	Partly Cloudy, 73-81º F	1-2
08.01.2021	0630-1030	Clear, 76-87º F	1-4
11.08.2021	0800-1200	Clear, 66-75º F	0-3
11.09.2021	0900-1300	Clear, 70-79º F	1-5

A total of about 40.5 person-hours were spent onsite during surveys in 2021. All habitat types onsite were visited on foot. The site was surveyed by conducting a series of transects across the subject property where possible, stopping periodically for observations and notations. A general habitat map and field notes were completed at the time of the survey. All field surveys were conducted during daylight hours. Digital photographs were taken to record the condition of the site during the present survey.

The methodology used is consistent with recommendations by the California Native Plant Society (CNPS 2001), CDFW (2018, 2000), and USFWS (2000). All plant species observed were identified in the field or collected for later identification or confirmation. All species were recorded in field notes and the locations of special status species were documented using GPS. Plants of uncertain identity were collected and subsequently identified from keys, descriptions,

and illustrations in Baldwin (2012), Abrams (1923, 1944, and 1951), Abrams and Ferris (1960), Munz (1974), and Parker (1999).

Vegetation community mapping of the site was also verified in 2021. The vegetation mapping from the 2018 biological survey report (L&L 2018a) was used as a basis and verified through field observations. Vegetation community classification is consistent with the California Natural Community List (CDFW 2020) and Sawyer et al. (2009).

2.3) Burrowing Owl Survey Methods

Protocol breeding season burrowing owl surveys were conducted by Mr. Bruyea concurrently with a portion of the general biological and botanical surveys (Table 2).

Table 2. Burrowing Owl Survey Dates and Weather Conditions

Date	Time	Sunrise*	Sunset*	Weather	Wind (mph)
05.21.2021	0545-0845	0547	--	Clear, 50-56º F	1-6

*sunrise/sunset times from timeanddate.com

A total of about 25.5 person-hours were spent during burrowing owl surveys in 2021. The site was examined for suitable burrow sites and for signs of occupation by burrowing owl, including pellets, feathers, whitewash, prey remains, and eggshell fragments, as well as individual owls. A search for potentially suitable burrows within dirt, wood, and rock debris piles, artificially created berms, and other locations was conducted during the surveys. The surveys were concentrated in areas typically associated with burrowing owl habitat, including open areas onsite and areas where California ground squirrel activity (i.e., suitable burrows) was expected. An additional 150-meter (500-foot) buffer area surrounding the site was visually inspected, where possible, in areas identified as potential burrowing owl habitat (Figure 5). Any developed areas were visually surveyed with binoculars due to trespassing concerns on private property.

Transects were walked throughout the property where suitable habitat is present. Coupled with binocular surveys of any restricted areas, this allowed for complete visual ground coverage of the survey area. Distance between transects was approximately 15 to 20 meters.

Per MSHCP protocol for burrowing owl surveys (RCA 2006), surveys should be conducted during weather that is conducive to observing owls outside their burrows and detecting burrowing owl sign. Surveys will not be accepted if they are conducted during rain, high winds (>20 mph), dense fog, or temperatures over 90°F. Surveys should be conducted in the morning one hour before sunrise to two hours after sunrise or in the early evening two (2) hours before sunset to one (1) hour after sunset. Surveys were conducted during appropriate hours and weather conditions (Table 2).

2.4) Nesting Raptor Survey Methods

Concurrently with the burrowing owl survey, the site was examined to determine the presence/absence of nesting raptors on the property, in particular white-tailed kite. This survey primarily focused on examining trees onsite and within 500 feet of the Project site for evidence of raptor nesting.

2.5) Riparian Bird Habitat Assessment Methods

A habitat assessment for riparian bird species least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo was conducted by John Konecny of Konecny Biological Services. Mr. Konecny holds USFWS Section 10(a) permit TE837308-7 for southwestern willow flycatcher.

The habitat assessment was conducted on September 29, 2021 and focused on the riparian vegetation on the site. Weather conditions during the survey were mild with little wind and scattered overcast. No call prompting of any species was conducted.

3.0) RESULTS

3.1) Literature Review Results

3.1.1) MSHCP Requirements

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of Public/Quasi-Public (PQP) Conserved Lands approximately 0.68 miles north-northeast of the site. This PQP area is identified as Ringing Rock Archaeological Site under the management of the Riverside County Parks and Open Space District. Other than the Ringing Rock Site, there are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages (Figure 6).

Surveys required by the MSHCP are a habitat assessment to address riparian/riverine and vernal pool habitats and associated species and burrowing owl (RCA 2021). If suitable habitat is present, focused surveys are required.

The MSHCP mapped vegetation layer (1994 baseline) depicts the site as largely agricultural land with areas of coastal sage scrub, grassland, and chaparral. No riparian habitat or Riversidean alluvial fan sage scrub is mapped on the parcel in the 1994 baseline (RCA 2021).

3.1.2) Precipitation

Precipitation data was obtained from the Clark, Sage, and Cranston Remote Automated Weather Stations (RAWS) (WRCC 2021). The Clark RAWS is located about 16.8 miles north-northwest of the Project site at an elevation of 1,720 feet; Sage RAWS is about 14.7 miles east-southeast of the site at an elevation of 1,516 feet; Cranston RAWS is about 21.0 miles east-northeast of the site at an elevation of 1,950 feet (WRCC 2021).

Total precipitation recorded by the Clark, Sage, and Cranston RAWS for the 2021 water year[1] was 4.96, 6.19, and 6.75 inches, respectively. Average annual precipitation for the Project area is 10 to 15 inches (WRCC 2018). Precipitation data is provided in Appendix C.

[1] A water year is October through September. For example, the 2021 water year is October 2020 through September 2021.

3.1.3) Previous Surveys

L&L reviewed the results of previous biological surveys of the site, which included a general biological survey and a jurisdictional delineation in 2003 (L&L 2003a, 2003b), spring botanical survey and focused surveys for Quino checkerspot butterfly and coastal California gnatcatcher in 2004 (L&L 2004a, 2004b, 2004c), burrowing owl survey, habitat assessment for riparian birds, and updated jurisdictional delineation in 2005 (L&L 2005a, 2005b, 2005c), burrowing owl survey, focused surveys for least Bell's vireo and southwestern willow flycatcher, and a habitat assessment for yellow-billed cuckoo in 2006 (L&L 2006a, 2006b), burrowing owl survey in 2007 (L&L 2007), surveys for special status plants, burrowing owl, and updated jurisdictional delineation in 2011 (L&L 2011), habitat assessment and burrowing owl survey in 2013 (L&L 2013), general biological and botanical survey in 2017 (L&L 2017), burrowing owl and nesting raptor surveys and updated jurisdictional delineation in 2018 (L&L 2018a, 2018b), and burrowing owl surveys and an updated jurisdictional delineation in 2019 (L&L 2019a, 2019b). Previous survey results are summarized and incorporated into this report as appropriate.

3.1.4) 2006 Environmental Impact Report

The 2006 Final Environmental Impact Report (EIR) for the Project (T&B 2006) includes the following mitigation measures for impacts to biological resources:

> 4.3-1 TTM No. 31194, Lot #503 (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.
>
> 4.3-2 Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the County of Riverside. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix E which states:
>
> > a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports

less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.

b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

4.3-3 Prior to issuance of grading permits, the applicant shall be required to pay Local Development Mitigation Fees (per County Ordinance No. 4.62.070) for implementation of the MSHCP.

4.3-4 Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the project's potentially significant impacts to the Stephens' kangaroo rat.

4.3-5 If construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged.

a. The white-tailed kite is "fully-protected" by the California Department of Fish and Game. If this species is documented as nesting on the project site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the CDFG.

4.3-6 Prior to the issuance of grading permits, the applicant shall submit documentation to the County of Riverside verifying that the necessary permits required by the U.S. Army Corps of Engineers (ACOE), California Department of Fish and Game (CDFG) and Regional Water Quality Control Board (RWQCB) have been obtained. The ACOE has a no net loss policy which requires that any unavoidable impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures

or similar measures as approved by the ACOE, CDFG, and RWQCB would reduce impacts to ACOE and CDFG jurisdictional areas to a level less than significant:

a. On or off-site replacement of ACOE jurisdictional waters and wetlands at a ratio no less than 1:1;

b. On or off-site replacement of CDFG jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or

c. Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).

4.3-7 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.

4.3-8 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the County prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.

4.3-9 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent to The MSHCP Conservation Area." The County of Riverside Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.

3.2) Vegetation Communities

Much of the property has been disturbed by current and historical cultivation and past sheep grazing and does not support native habitat. Less disturbed areas are present, primarily in the northeastern portions of the site, with a mixture of disturbed and relatively undisturbed California buckwheat scrub and chamise chaparral. Sparse riparian vegetation and trees are found along the blue-line stream in the northwestern/central portion of the site (Figure 7).

The agricultural fields are dry farmed for wheat. Evidence of widespread sheep grazing was observed throughout all areas of the site in 2013. Hillsides containing California buckwheat scrub along the farmland edges, especially to the north and east, had been severely damaged by sheep grazing. Very few annuals remained (none in some areas) and many of the perennials had been stripped of vegetation and/or trampled. No evidence of current sheep grazing was observed during surveys in 2017, 2018, 2019, and 2021 and regrowth of native annuals and perennials was observed in the buckwheat scrub areas.

Table 3. Vegetation Communities Present

Vegetation Community	**Area Present (acres)**		
	Onsite	**Offsite**	**Total**
California Buckwheat Scrub	41.69	0	41.69
California Buckwheat Scrub/Ruderal	2.52	0	2.52
Chamise Chaparral	2.05	0.18	2.23
Arroyo Willow Thickets and Mulefat Thickets	1.31	0.05	1.36
Agriculture and Disturbed/Ruderal	157.08	4.45	161.53
Total	**204.65**	**4.68**	**209.33**

Table 4. Vegetation Community Impacts

Vegetation Community	**Area Impacted (acres)***		
	Onsite	**Offsite**	**Total**
California Buckwheat Scrub	18.49**	0	18.49**
California Buckwheat Scrub/Ruderal	2.52	0	2.52
Chamise Chaparral	2.05	0.18	2.23
Arroyo Willow Thickets and Mulefat Thickets	1.31	0.05	1.36
Agriculture and Disturbed/Ruderal	154.30	4.45	158.75
Total	**178.67**	**4.68**	**183.35**

*Any discrepancy in totals due to rounding error. **Includes the water tank site. The water tank site is a separate project covered under a separate CEQA process by EMWD and not a part of the Golden Meadows Project.

3.2.1) California Buckwheat Scrub

In previous reports, this vegetation community was referred to by the older name of Riversidean sage scrub (Holland Element Code 32700). Under the more recent Sawyer et al. (2009) classification, this type of coastal scrub is best classified as California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance). CDFW ranks this community as S5 (secure – common, widespread, and abundant) and it is not considered sensitive.

California buckwheat scrub is present on the northeastern portion of the site on south, west, and east-facing slopes containing numerous rocky outcrops. Native shrubs and other conspicuous plants commonly observed in these areas include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and white sage (*Salvia apiana*). Other conspicuous plants include brittlebush (*Encelia farinosa*), yellow bush-penstemon (*Keckiella antirrhinoides*), wishbone bush (*Mirabilis laevis* var. *crassifolia*), sweetbush (*Bebbia juncea*), and black sage (*Salvia mellifera*). Annuals are also abundant in this community and include natives such as wreath plant (*Stephanomeria virgata*) and western sunflower (*Helianthus annuus*) and non-natives such as shortpod mustard (*Hirschfeldia incana*), red brome (*Bromus rubens*), slender wild oat (*Avena barbata*), and Mediterranean grass (*Schismus barbatus*).

Open patches can be found throughout portions of the buckwheat scrub onsite and contain a mixture of native and non-native annuals. Natives include popcorn flower (*Plagiobothrys* species), large flower rancher's fiddleneck (*Amsinckia intermedia*), common cryptantha (*Cryptantha intermedia*), evening primrose (*Camissonia* species), wild carrot (*Daucus pusillus*), slender tarweed (*Deinandra fasciculata*), and phacelia (*Phacelia* species). Other plants observed include chia (*Salvia columbariae*), perezia (*Acourtia microcephala*), hooked navarretia (*Navarretia hamata*), sapphire woollystar (*Eriastrum sapphirinum*), and fringed spineflower (*Chorizanthe fimbriata*).

3.2.2) Chamise Chaparral

In previous reports, this vegetation community was referred to by the older name of northern mixed chaparral (Holland Element Code 37130). Under the more recent Sawyer et al. (2009) classification, this vegetation community is best classified as chamise chaparral (*Adenostoma fasciculatum* Shrubland Alliance) or chamise–black sage chaparral (*Adenostoma fasciculatum*–*Salvia mellifera* Shrubland Alliance). CDFW ranks chamise chaparral as S5 (secure – common,

widespread, and abundant) and chamise-black sage chaparral at S4 (apparently secure – uncommon but not rare). The chaparral on the site is not considered sensitive.

Common species found in the chaparral areas onsite are chamise (*Adenostoma fasciculatum*), black sage, and other perennials. A poorly developed understory is usually present in association with chaparral and is characteristic of this vegetation community on the site.

Only small patches of remnant chaparral were observed on the site along the southern boundary. The survey in November 2021 found that a portion of the chamise chaparral on the site had been mowed to the ground.

3.2.3) Arroyo Willow Thickets and Mulefat Thickets

In previous reports, the riparian vegetation onsite was referred to by the older names of southern arroyo willow riparian (Holland Element Code 61320), mulefat scrub (Holland Element Code 63310), and disturbed wetland (Holland Element Code 11200). Under the more recent Sawyer et al. (2009) classification, this vegetation community is best classified as arroyo willow thickets (*Salix lasiolepis* Shrubland Alliance) and mulefat thickets (*Baccharis salicifolia* Shrubland Alliance). CDFW ranks arroyo willow thickets as S4 (apparently secure – uncommon but not rare); however, it is considered sensitive. Mulefat thickets are ranked as S5 (secure – common, widespread, and abundant) and not considered sensitive.

Arroyo willow thickets and mulefat thickets are dependent on the presence of at least periodic surface or subsurface water. The northwestern portion of the site contains a degraded blue-line stream sparsely inhabited by arroyo willow (*Salix lasiolepis*), mulefat (*Baccharis salicifolia*), or a mix of the two. A single Fremont cottonwood tree (*Populus fremontii* ssp. *fremontii*), five southern California black walnut trees (*Juglans californica*), black willow (*Salix gooddingii*), and scattered blue elderberry (*Sambucus nigra* ssp. *cerulea*) and non-native tamarisks (*Tamarix* species) are also present. The understory is dominated by native and non-native annuals, including (but not limited to) shortpod mustard, western sunflower, large-flowered rancher's fiddleneck, Spanish clover (*Acmispon americanus*), wild radish (*Raphanus sativus*), mayweed (*Anthemis cotula*), prickly lettuce (*Lactuca serriola*), and non-native grasses, including wheat (*Triticum aestivum*) and oat (*Avena* species).

Surface water was not observed within any of the onsite drainage features during the surveys. Over the course of surveys since 2003, it has been noted that the density and health of riparian

shrubs and trees appears to be declining. Over time, some areas of the streambed and gaps in riparian vegetation have been incorporated into the surrounding agricultural fields.

3.2.4) Agriculture and Disturbed/Ruderal

In previous reports, agricultural fields and disturbed/ruderal areas onsite were referred to by the older designations of Holland Element Codes 18300 and 11300. Agriculture is not included under the more recent Sawyer et al. (2009) classification. Disturbed/ruderal areas that are strongly dominated by annual non-natives may be classified as semi-natural stands, such as *Brassica* (*nigra*) and Other Mustards Semi-natural Herbaceous Stands or *Bromus rubens*—*Schismus barbatus* Semi-natural Herbaceous Stands. These are not considered sensitive vegetation communities.

The majority of the site is under cultivation and consists of dry-farmed wheat crops. Invasive plants are found within farmed portions of the site, and include lamb's quarters (*Chenopodium murale*), calabazilla (*Cucurbita foetidissima*), and knotweed (*Polygonum aviculare*).

Disturbed habitat includes unvegetated areas (such as roads) and areas that contain mostly non-native plant species, including ornamentals and ruderal invasives. Some non-native and weedy species have invaded these areas, including short-pod mustard, red brome, redstem filaree (*Erodium cicutarium*), and various non-native grasses. Other non-native plant species observed in these areas include horehound (*Marrubium vulgare*), Russian thistle (*Salsola tragus*), and tumbling pigweed (*Amaranthus albus*).

3.3) Plant Species

A total of 127 plant species were observed onsite during biological surveys conducted by L&L from 2003 through 2021. Of the 127 plant species present, 46 (36 percent) are non-natives. A list of all plant species identified onsite during previous and current surveys is included in Appendix A.

No state or federally listed plants were observed during surveys and the Project site is not within USFWS designated critical habitat for any listed plant species. Two special status plant species were observed on the site during surveys, long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*) and southern California black walnut (*Juglans californica*). Details of special status plant observations are provided in Table 5 and locations are mapped on Figure 8.

Table 5. Special Status Plant Species Observations

Species	Date	GPS Coordinates (Decimal Degrees)	Number Detected	Elevation (feet)
Long-spined spineflower *Chorizanthe polygonoides var. longispina*	05.12.2017	33.655304, -117.187238	2	~1600
Southern California black walnut *Juglans californica*	09.22.2005 11.08.2021	33.653919, -117.192902	1	1517
	09.22.2005 11.08.2021	33.653955, -117.192924	1	1518
	11.08.2021	33.654018, -117.193226	1	1519
	11.08.2021	33.653468, -117.192879	1	1517
	11.08.2021	33.652603, -117.192823	1	1522

Long-spined spineflower is an annual herb in the Polygonaceae (Buckwheat) family. It is found in chaparral, coastal scrub, meadows and seeps, valley and foothill grasslands, and vernal pools at 100 to 5,020 feet elevation. It flowers from April through July. This species is found in Riverside, Orange, and San Diego Counties and Baja California, Mexico (CNPS 2021).

This species is not state or federally listed as threatened or endangered. It has a California Rare Plant Rank (CRPR) of 1B.2 (rare or endangered in California and elsewhere, moderately threatened in California). It is a covered species under the MSHCP and considered adequately conserved.

Long-spined spineflower was observed on the site in 2017. Two (2) plants were observed on clay soils within California buckwheat scrub in the northeast portion of the site along an east-west ridgeline. This area has been impacted by OHV use and the species has not been observed during subsequent surveys. Long-spined spineflower has also been documented by the CNDDB (Element Occurrence #57) on the east-central portion of the site. This record is from 2004 and estimates at least 100,000 plants on five acres of the site. It was not observed in this location during L&L surveys.

Southern California black walnut is a deciduous tree in the Juglandaceae (Walnut) family. It is found in chaparral, cismontane woodland, coastal scrub, and riparian woodland at 165 to 2,955 feet elevation. It is endemic to California and found in portions of southern, central, and northern California (CNPS 2021).

This species is not state or federally listed as threatened or endangered. It has a CRPR of 4.2 (limited distribution, moderately threatened in California). It is a covered species under the MSHCP and considered adequately conserved.

Five (5) southern California black walnut trees were observed in the riparian area in the central portion of the site. Representative photos are provided in Appendix D.

Three (3) additional special status plant species have a low to moderate or moderate potential to occur on the Project site but not been observed during surveys (see Appendix B). These species are:

- smooth tarplant (*Centromadia pungens ssp. laevis*; CRPR 1B.1 [rare or endangered in California and elsewhere, seriously threatened in California]),
- Parry's spineflower (*Chorizanthe parryi var. parryi*; CRPR 1B.1), and
- small-flowered morning-glory (*Convolvulus simulans*; CRPR 4.2).

These three (3) species are all covered under the MSHCP and considered adequately conserved.

3.3.1) Trees

There is a single immature coast live oak tree (*Quercus agrifolia*) present on the site within the riparian area. Other native trees on the site are blue elderberry, southern California black walnut, Fremont cottonwood, arroyo willow, and black willow. Non-native and escaped ornamental trees on the site include Peruvian pepper tree (*Schinus molle*), eucalyptus, tree tobacco (*Nicotiana glauca*), and tamarisk. The City may regulate removal or replacement of trees and a tree survey may be required.

3.4) Wildlife Species

A total of 85 vertebrate wildlife species, plus domestic dog, have been detected during L&L's biological surveys of the site from 2003 through 2021. An additional 15 common butterfly species were observed (during Quino checkerspot butterfly surveys in 2004) but this does not represent a comprehensive list of insects present. A list of all wildlife species identified onsite is provided in Appendix A. Details of listed and special status species observations are provided in Table 6 and observations are mapped on Figure 9. CNDDB forms for 2021 observations are included in Appendix E.

City of Menifee, California

3.4.1) Listed and Fully Protected Wildlife

Biological surveys conducted on the Project site by L&L from 2003 to 2021 detected two listed or fully protected wildlife species on the site, coastal California gnatcatcher (*Polioptila californica californica*) and white-tailed kite (*Elanus leucurus*), discussed below.

Two other listed species have not been observed on the Project site during surveys but have a moderate or high potential to occur, Stephens' kangaroo rat (*Dipodomys stephensii*) and tricolored blackbird (*Agelaius tricolor*) (see Appendix B).

Stephens' kangaroo rat is federally listed as endangered and state listed as threatened. Based on potentially suitable habitat and multiple documented occurrences in the Project vicinity (CDFDW 2021c), this species has a high potential to occur on the site. Stephens' kangaroo rat is a covered species under the MSHCP and considered adequately conserved. Focused trapping surveys for this species are not required by the MSHCP.

Tricolored blackbird is state listed as threatened. Based on potentially suitable foraging habitat and several eBird records (eBird 2021) in the Project vicinity, this species has a low to moderate potential to forage on the site, but there is no suitable nesting habitat. Tricolored blackbird is a covered species under the MSHCP and considered adequately conserved.

Coastal California Gnatcatcher

Coastal California gnatcatcher is federally listed as threatened and a CDFW Species of Special Concern. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Focused surveys for this species are not required by the MSHCP; however the MSHCP limits disturbance to outside the nesting season.

Surveys from 2004 to 2021 have documented coastal California gnatcatchers on the Project site (Table 6). Nesting was observed in 2004 and breeding pairs were present in 2011, 2017, and 2018. Coastal California gnatcatchers were observed in 2021 and, although nesting was not observed, it is likely. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site (Figure 9).

White-tailed Kite

White-tailed kite (*Elanus leucurus*) is a CDFW Fully Protected species. The classification of Fully Protected was California's initial effort to identify and protect rare wildlife species. With a few exceptions, Fully Protected species have subsequently been listed under the California

and/or Federal Endangered Species Acts. One of the exceptions is white-tailed kite, which is not state or federally listed, but retains its Fully Protected status. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

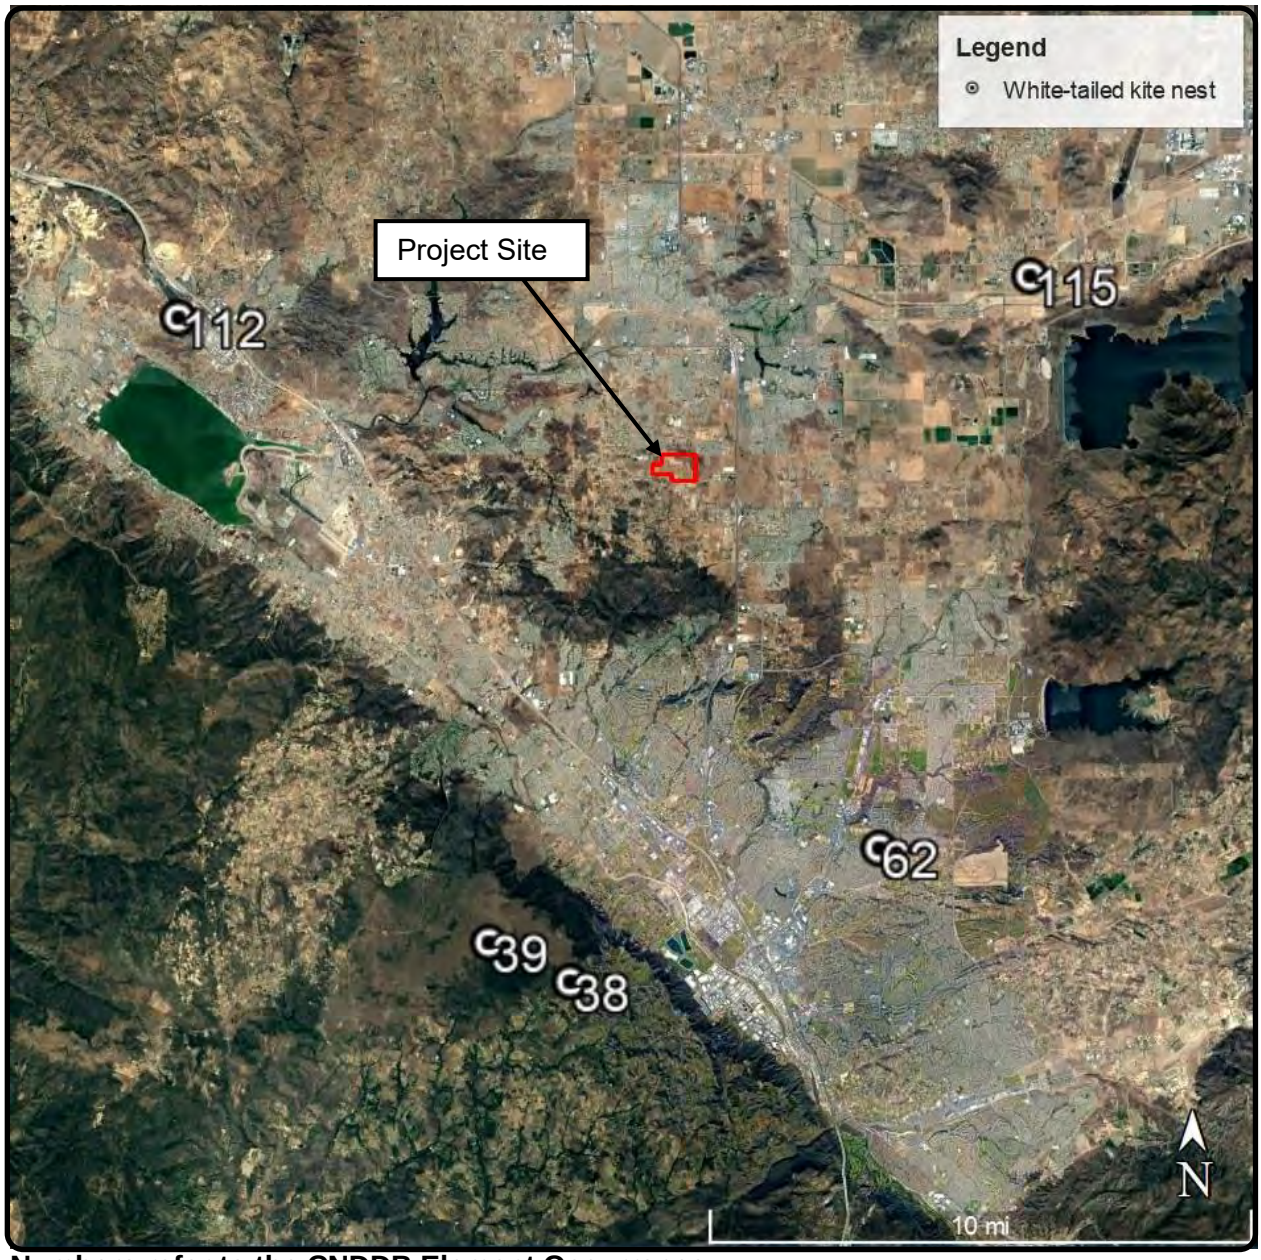
White-tailed kite forages in open grasslands, farmlands, meadows, and wetlands. Nests are located near foraging areas in substantial groves of dense, broad-leafed trees. Nests are built near the top of oaks, willows, or other trees, usually between 20 to 100 feet above the ground. The nest is composed of loosely piled sticks, lined with grass, straw, or rootlets. White-tailed kite breeds from February to October, with a peak from May to August (Zeiner et al. 1990).

The CNDDB (CDFW 2021c) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the Project site (Figure 10):

> Occurrence 38 is approximately 9.3 miles south-southwest of the Project site. The occurrence is located at the Santa Rosa Plateau Preserve within oak savannah and native grassland at an elevation of 1,950 feet. Successful nesting was last documented in 1988 and 1989. Google Earth images show undisturbed habitat present in that area and the occurrence is presumed extant.
>
> Occurrence 39 is approximately 9.2 miles southwest of the Project site. The occurrence is described as located on private land between two parcels of Santa Rosa Plateau Preserve property. The habitat is oak savannah and native grassland at an elevation of 1,820 feet. The nest was last observed in 1989 (active nest, outcome unknown) and noted as threatened by proposed development. Examination of Google Earth images shows undisturbed habitat present in that area. The occurrence is presumed extant.
>
> Occurrence 62 is approximately 7.5 miles southeast of the Project site in Murrieta. The occurrence is located in southern riparian scrub habitat at an elevation of 1,240 feet. The record notes that the area was proposed for development, and Google Earth images now show the occurrence within a narrow area of habitat surrounded by residential developments. A pair of white-tailed kites was last observed in 1999. The occurrence is presumed extant but may have been extirpated by development.
>
> Occurrence 112 is approximately 9.4 miles west-northwest of the Project site and just north of Lake Elsinore. The occurrence is located in willow riparian woodland at an elevation of 1,258 feet. Successful nesting was documented in 2006. Google Earth images show undisturbed habitat at that location and the occurrence is presumed extant.

Occurrence 115 is approximately 7.1 miles northeast of the Project site. The occurrence is located in a small grove of trees associated with a rural residence in Winchester, north of Diamond Valley Lake. Agricultural fields are also present in the area. Successful nesting was documented in 2005 and 2006. Google Earth images show trees and agricultural fields remain in the area, as described in the CNDDB record. The occurrence is presumed extant.

Two white-tailed kites were observed on the Project site in 2005 and one in 2011 (Table 6, Figure 9). No kites have been observed during more recent surveys. Although this species may forage on the Project site and potentially suitable nesting habitat is present, no nesting has been observed there. A raptor nest was present in a eucalyptus tree in the riparian area on the site but has been observed during surveys to be either inactive or potentially associated with red-tailed hawk (*Buteo jamaicensis*) nesting. The 2021 survey found that this nest is no longer present.



Numbers refer to the CNDDB Element Occurrence.

Fairy Shrimp

The two listed fairy shrimp species known from the area are vernal pool fairy shrimp (*Branchinecta lynchi*), a federally listed threatened species, and Riverside fairy shrimp (*Streptocephalus woottoni*), a federally listed endangered species. Both species are covered by the MSHCP and surveys are required where suitable habitat is present.

Vernal pool fairy shrimp is restricted to seasonal pools and prefers cool-water pools that are often short lived. Riverside fairy shrimp is restricted to deep seasonal vernal pools, ephemeral ponds, stock ponds, and other human-modified depressions. Riverside fairy shrimp prefers warm-water pools that remain filled for extended periods of time (Dudek 2003).

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys. No fairy shrimp or potential fairy shrimp habitat was observed during current or previous surveys.

Riparian Birds

Least Bell's vireo (*Vireo bellii pusillus*) is state and federally listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species is migratory and breeds in California, arriving in March and departing by September or October. Males establish and defend territories in riparian woodlands and riparian scrub. Territory size ranges from 0.5 to 7.5 acres (USFWS 1998). Dense shrub cover is required for nesting.

There are two (2) CNDDB documented occurrences of nesting least Bell's vireo within five (5) miles of the site. The closest is Element Occurrence (EO) #412, located along the San Jacinto River just south of Canyon Lake, 4.2 miles to the west-northwest of the site. This occurrence is from 2002 and documents one (1) least Bell's vireo territory.

EO #407 is 4.5 miles west-northwest of the site along the San Jacinto River east of Lake Elsinore. This occurrence had one least Bell's vireo territory in 2003, two territories in 2004 and 2005, one singing male in 2006, six territories and two pairs with fledglings in 2009, and nine territories in 2010.

Southwestern willow flycatcher (*Empidonax traillii extimus*) is state and federally listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species inhabits dense riparian forests with ample numbers of willows and other associated trees and shrubs.

Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*) is federally listed as threatened and state listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species inhabits extensive riparian thickets or forests with dense, low-level or understory foliage and abutting on slow-moving watercourses, backwaters, or seeps.

There are no CNDDB documented occurrences of nesting southwestern willow flycatcher or western yellow-billed cuckoo within five (5) miles of the site.

The habitat assessment found that riparian vegetation on the site is distributed intermittently along a linear area that is approximately 1,500-feet long (Figure 7). The riparian area is no more than two or three shrubs across at its widest points and surrounded by agricultural fields. The understory is poorly developed and has several introduced species. Representative photos are included in Appendix D.

No least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo have been incidentally detected during surveys. Riparian vegetation onsite is scattered and degraded, the understory is poorly developed, and the streambed does not have persistent water flow. Typical habitat to support least Bell's vireo, southwestern willow flycatcher, and yellow-billed cuckoo is not present and these species are considered absent from the site.

Quino Checkerspot Butterfly

Quino checkerspot butterfly (*Euphydryas editha quino*) is federally listed as endangered. No adults, larvae, or pupae were observed onsite during focused surveys in 2004, although potentially suitable habitat and larval host and nectaring plant species are present. This species has not been incidentally observed during any subsequent surveys. Quino checkerspot butterfly is a covered species under the MSHCP and considered adequately conserved. Focused surveys are not required by the MSHCP.

3.4.2) Special Status Wildlife

In addition to coastal California gnatcatcher and white-tailed kite, discussed above, biological surveys conducted on the Project site by L&L from 2003 to 2021 detected 19 special status wildlife species on the site:

- orange-throated whiptail (*Aspidoscelis hyperythra*; CDFW Watch List),
- coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*; CDFW Species of Special Concern),
- coast horned lizard (*Phrynosoma blainvillii*; CDFW Species of Special Concern),
- Cooper's hawk (*Accipiter cooperi*; CDFW Watch List),
- southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*; CDFW Watch List species),
- great egret (*Ardea alba*; CDFW Special Animal),
- great blue heron (fly over) (*Ardea herodias*; CDFW Special Animal),
- Bell's sage sparrow (*Artemisiospiza belli belli*; USFWS Bird of Conservation Concern, CDFW Watch List species),
- burrowing owl (*Athene cunicularia*, USFWS Bird of Conservation Concern, CDFW Species of Special Concern),
- Costa's hummingbird (*Calypte costae*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- wrentit (*Chamaea fasciata*; USFWS Bird of Conservation Concern),
- northern harrier (*Circus cyaneus*; CDFW Species of Special Concern),
- Nuttall's woodpecker (*Dryobates nuttallii*; USFWS Bird of Conservation Concern),
- California horned lark (*Eremophila alpestris actia*; CDFW Watch List),
- loggerhead shrike (*Lanius ludovicianus*; USFWS Bird of Conservation Concern, CDFW Species of Special Concern),
- rufous hummingbird (*Selasphorus rufus*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- Lawrence's goldfinch (*Spinus lawrencei*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- California thrasher (*Toxostoma redivivum*; USFWS Bird of Conservation Concern), and
- San Diego black-tailed jackrabbit (*Lepus californicus bennettii*; CDFW Species of Special Concern).

All of these species are covered under the MSHCP and considered adequately conserved, with the exception of great egret, Costa's hummingbird, wrentit, Nuttall's woodpecker, rufous hummingbird, Lawrence's goldfinch, and California thrasher, which are not covered under the MSHCP. Burrowing owl is discussed below. Special status species observations are listed in Table 6 and mapped on Figure 9.

Five (5) additional special status wildlife species have a low to moderate potential to occur on the Project site but have not been observed during L&L surveys (see Appendix B). These species are:

- Crotch bumble bee (*Bombus crotchii*; CDFW Special Animal[2]),
- southern California legless lizard (*Anniella stebbinsi*; CDFW Species of Special Concern),
- Dulzura pocket mouse (*Chaetodipus californicus femoralis*; CDFW Species of Special Concern),
- northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*; CDFW Species of Special Concern), and
- western mastiff bat (foraging) (*Eumops perotis californicus*; CDFW Species of Special Concern).

Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP.

Burrowing Owl

Burrowing owl (*Athene cunicularia*) is protected under the federal Migratory Bird Treaty Act and California Fish and Game Code and is a CDFW Species of Special Concern. It is a small, ground-dwelling owl found in open dry grassland, desert, or shrubland areas and in uncultivated agricultural areas, rangelands, and other open areas with low-growing vegetation.

Burrows are an essential element of burrowing owl habitat. Although the burrowing owl is capable of excavating its own burrows in soft soils, it typically modifies and inhabits abandoned

[2] Crotch bumble bee was previously a candidate for state listing, but the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act: *Almond Alliance of California v. California Department of Fish and Wildlife*, Sacramento Superior Court No. 34-2019-80003216 (Nov. 13, 2020). The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations.

burrows of small mammals, such as ground squirrels and pocket gophers. The burrowing owl has also been known to use man-made structures such as cement culverts, debris piles, and other artificial burrows.

Occupancy of burrowing owl habitat can be verified at a site by observation of at least one (1) owl or sign of owl (molted feathers, cast pellets, prey remains, eggshell fragments, or excrement) at or near a burrow entrance. A site is considered occupied if at least one (1) owl has been identified onsite in the past three (3) years, because (if undisturbed) burrowing owls exhibit high site fidelity (CDFG 2012, CBOC 1993).

The site has suitable burrowing owl habitat. Focused surveys for burrowing owl in 2005, 2006, 2007, 2011, and 2013 did not detect burrowing owls utilizing the site. No burrowing owl or sign was observed during 2017 general biological surveys.

Focused surveys in 2018 observed a single adult burrowing owl onsite and one (1) burrow with signs of occupation (Table 6, Figure 9). The owl was observed on May 30, 2018. The occupied burrow was found very close to where the owl was observed. Pellets, scat, feathers, owl tracks, and pieces of shredded cloth were observed at the burrow entrance. The burrow was monitored during subsequent site visits, but there were no additional observations of burrowing owl adults or juveniles. It was not determined if the owl was using the burrow for nesting. Coyote and/or dog tracks were observed around the burrow, but the burrow itself was not disturbed and there were no signs that owls had been predated. No other active burrows or burrowing owls were observed during surveys in 2018.

Focused surveys in 2019 did not detect any burrowing owl, occupied burrows, or owl sign. The agricultural fields on the site, including the site of the 2018 burrow observation, had tall, dense non-native vegetation at that time, which created unsuitable conditions for burrowing owl. Thick vegetation was also present at the burrow site in 2021, until the agricultural fields were mowed (sometime between August and November surveys).

No burrowing owls, owl sign (pellets, scat, feathers, tracks, etc.), or occupied burrows were observed onsite during the 2021 protocol breeding season survey. No owls or owl sign were observed at the 2018 burrow site in November 2021 after the agricultural fields were mowed. Potentially suitable burrowing owl habitat is present on the site, including small mammal burrows. Potentially suitable habitat is also present within the 150-meter buffer area (Figure 5), but no owls, owl sign, or occupied burrows were observed in the buffer.

There are 47 CNDDB documented occurrences of burrowing owl within five (5) miles of the Project site (CDFW 2021c). These occurrences date between 1998 and 2016.

Because suitable habitat is present, the MSHCP requires a preconstruction clearance survey for burrowing owl within 30 days prior to the start of site disturbance. If burrowing owls are found on the site at that time, additional mitigation is required under the MSHCP (see Section 6.10).

Nesting Birds

There is habitat suitable for nesting birds (including raptors) within and adjacent to the site. Nesting birds may utilize trees, shrubs, and other vegetation, and open ground on and adjacent to the site for nesting. Some relatively large eucalyptus trees are present on the western portion of the site and along the western boundary along Evans Road. Red-tailed hawks (*Buteo jamaicensis*) have been observed onsite and may be utilizing the trees for nesting.

A potential (inactive) raptor nest site was found in a large eucalyptus tree on the site in 2013. It was located in a eucalyptus tree in the west-central portion of the site (Table 6, Figure 9). No raptors were observed utilizing the nest site during surveys in 2013, 2017, 2018, and 2019. The 2021 survey found that the nest was no longer present and likely fell from the tree.

3.4.3) Wildlife Corridor

Wildlife corridors link together areas of suitable wildlife habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated “islands” of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because movement barriers prohibit the infusion of new individuals and genetic variation.

Wildlife movement activities usually fall into one of three movement categories: dispersal (e.g., juvenile animals dispersing from natal areas or individuals extending their range), seasonal migration, and movements related to home range activities (e.g., foraging for food or water, defending territories, or searching for mates, breeding areas, or cover).

Drainages often serve as wildlife corridors and travel routes; however, the riparian vegetation on the site is not continuous. The site is largely surrounded by scattered existing development and

there is no connectivity between the site and conserved lands to the east (Diamond Valley Lake) and southwest (Santa Rosa Plateau, Cleveland National Forest).

The California Essential Habitat Connectivity Project (CDFW 2021d) maps the Project site and surrounding areas as "limited connectivity opportunity." Although there may be limited local movement of wildlife on and across the site, it is not within or adjacent to a wildlife corridor or potential corridor.

3.5) Jurisdictional Waters/Wetlands and MSHCP Riparian/Riverine and Vernal Pool Habitat

Under MSHCP Volume 1, Section 6.1.2, areas associated with wetland and streambed systems must be evaluated for consideration as riparian/riverine or vernal pool habitat. Riparian/riverine areas are defined within the MSHCP as:

> ". . . lands which contain Habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year."

Vernal pools are defined within the MSHCP as:

> ". . . seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. . ."

An ephemeral drainage is present on the site and mapped as a USGS blue-line stream (Figure 11). This drainage includes riparian vegetation such as arroyo willow, Fremont cottonwood, and mulefat (see Section 3.2.3). A jurisdictional delineation was completed in 2011 and updated in 2018 and 2019.

The delineation found 0.153 acre of unvegetated state streambed (which is also MSHCP riverine habitat) and 1.208 acre of state wetland (which is also MSHCP riparian habitat). The survey also identified 0.065 acre of federal Waters of the U.S. (WoUS), none of which is federal wetland (Table 7).

All jurisdictional areas onsite will either be impacted by Project development or incorporated into the Avoidance Area (Figure 12). The Avoidance Area will retain native riparian habitat.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

Table 7. Summary of Jurisdictional Resources Present

Feature	Total Present (acres)			
	State Streambed / MSHCP Riverine	State Wetland / MSHCP Riparian	Federal Waters	Federal Wetland
1	0.037	0.373	0.005	0
1b	0.025	0.148	0.025	0
2	0.065	0.642	0.025	0
3	0	0	0	0
4 (offsite)	0.023	0.046	0.009	0
5 (offsite)	0.004	0	0.001	0
TOTALS*	0.153	1.208	0.065	0

*Any discrepancy in totals due to rounding error.

4.0) URBAN WILDLANDS INTERFACE ANALYSIS

The Project proposes an Avoidance Area along the riparian area on the site as well as an Open Space Area in the northeast corner of the site. An Urban Wildlands Interface Analysis is included here in case the MSHCP requires implementation of the Urban Wildlands Interface Guidelines (Section 6.1.4 of the MSHCP). If these areas are not conserved and/or the Urban Wildlands Interface Guidelines are not applicable, this section will be withdrawn.

The main portion of the Avoidance Area will be a channel about five (5) feet deep with 4:1 slopes. At the south end is a smaller portion that will be contoured as a basin about five (5) feet deep with 4:1 slopes. Offsite flows from the south will be picked up by v-ditches along the tract boundary and the ditches will convey the flows to this basin. Water will flow from the basin underneath an internal street and into the main portion of the Avoidance Area through a box culvert. The Avoidance Area will retain native riparian habitat.

The Avoided Area and Open Space Area will be owned and maintained by the Homeowners Association (HOA) according to HOA guidelines.

4.1) Drainage

Runoff from the development will be treated in water quality basins to remove common pollutants and reduce peak flows before being discharged into the Avoidance Area.

During construction, all contractors and subcontractors will use Best Management Practices (BMPs) to manage, capture, control, eliminate, and prevent sediment, debris, and pollutants from being discharged into streambeds and drainages. A Storm Water Pollution Prevention Plan (SWPPP) has been prepared for the Project. Construction BMPs address sediment and erosion control, non-sediment pollutants, and non-storm water BMPs.

If grading occurs when the ephemeral streambed is wetted, a bypass will be required. A Bypass Plan will be developed by the SWPPP consultant prior to initiation of grading unless all grading can occur when the ephemeral streambed is dry.

Post-construction BMPs include minimizing urban runoff, minimizing the impervious footprint, conserving natural areas, and minimizing Directly Connected Impervious Areas (DCIAs). Project plans incorporate BMPs to address water quality in low flows and first flush storm runoff, as well as to control post-construction peak flow volumes. These BMPs include three (3)

detention basins, two (2) infiltration basins, three (3) sand filter basins, two (2) modular wetland systems, and a CDS (Continuous Deflective Separation) stormwater treatment unit.

4.2) Toxics

Land uses proposed in proximity to the Avoidance Area that use chemicals that are potentially toxic, or that may adversely affect wildlife species, habitat, or water quality shall incorporate measures to ensure that application of such chemicals does not result in discharge to the Avoidance Area. The greatest risk is from landscaping fertilizer and herbicide/pesticide runoff.

4.3) Fencing

The siting and design of fencing should not impede wildlife movement. Given the location of the Avoidance Area within the residential development, wildlife using the site are likely to be common species that are comfortable with proximity to human disturbance.

The Project boundary and back and side yards will be fenced according to a fencing plan approved by the lead agency. No direct access between residences and the Open Space Area or the Avoidance Area will occur or be allowed.

Mitigation Measure 4.3-7 in the 2006 EIR requires individual lot fencing to be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited.

4.4) Barriers

Proposed land uses adjacent to the Avoidance Area and Open Space Area shall incorporate barriers in Project designs, where appropriate, to minimize unauthorized public access, domestic animal predation, illegal trespass, or trash dumping. Such barriers may include native landscaping, rocks/boulders, fencing, walls, signage, and/or other appropriate mechanisms.

The Project will install two (2) or more information boards (to be located at each end of the Avoidance Area and at other access points, as needed) providing a description of suitable uses and asking residents to remain on existing trails and to keep pets on a leash.

4.5) Lighting

Night lighting shall be directed away from the Avoidance Area and Open Space Area to protect species from direct night lighting. Shielding shall be incorporated in Project designs to ensure ambient lighting in the Avoidance Area and Open Space Area is not substantially increased.

Mitigation Measure 4.3-8 in the 2006 EIR requires that night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in Project designs to ensure ambient lighting in the wetland area is not increased.

4.6) Noise

Proposed noise-generating land uses affecting the Avoidance Area and Open Space Area shall incorporate setbacks, berms, or walls to minimize the effects of noise on wildlife resources pursuant to applicable rules, regulations, and guidelines related to land use noise standards.

4.7) Invasives

Invasive species (refer to MSHCP Table 6-2, below) shall not be used in development or restoration plan activities. Mitigation Measure 4.3-9 in the 2006 EIR requires that the landscape plans for the Project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as “Plants That Should Be Avoided Adjacent to The MSHCP Conservation Area” (MSHCP Table 6-2).

4.8) Grading/Land Development

Manufactured slopes will be required to extend into the Avoidance Area to support the Project design. Grading should not extend into the Open Space Area.

4.9) Weed Abatement/Fuel Modification

Weed abatement and fuel modification zones may encroach into portions of the Avoidance Area. Weed abatement and fuel modification zones should not encroach into the Open Space Area.

MSHCP Table 6-2. Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area (Taken Directly from MSHCP Section 6.1.4)

BOTANICAL NAME	COMMON NAME
Acacia spp. (all species)	acacia
Achillea millefolium var. *millefolium*	common yarrow
Ailanthus altissima	tree of heaven
Aptenia cordifolia	red apple
Arctotheca calendula	cape weed
Arctotis spp. (all species & hybrids)	African daisy
Arundo donax	giant reed or arundo grass
Asphodelus fistulosus	asphodel
Atriplex glauca	white saltbush
Atriplex semibaccata	Australian saltbush
Carex spp. (all species*)	sedge
Carpobrotus chilensis	ice plant
Carpobrotus edulis	sea fig
Centranthus ruber	red valerian
Chrysanthemum coronarium	annual chrysanthemum
Cistus ladanifer (incl. hybrids/varieties)	gum rockrose
Cortaderia jubata [*syn.C. Atacamensis*]	jubata grass, pampas grass
Cortaderia dioica [syn. *C. sellowana*]	pampas grass
Cotoneaster spp. (all species)	cotoneaster
Cynodon dactylon (incl. hybrids varieties)	Bermuda grass
Cyperus spp. (all species*)	nutsedge, umbrella plant
Cytisus spp. (all species)	broom
Delosperma 'Alba'	white trailing ice plant
Dimorphotheca spp. (all species)	African daisy, Cape marigold
Drosanthemum floribundum	rosea ice plant
Drosanthemum hispidum	purple ice plant
Eichhornia crassipes	water hyacinth
Elaegnus angustifolia	Russian olive
Eucalyptus spp. (all species)	eucalyptus or gum tree
Eupatorium coelestinum [syn. *Ageratina* sp.]	mist flower
Festuca arundinacea	tall fescue
Festuca rubra	creeping red fescue
Foeniculum vulgare	sweet fennel
Fraxinus uhdei (and cultivars)	evergreen ash, shamel ash
Gaura (spp.) (all species)	gaura
Gazania spp. (all species & hybrids)	gazania
Genista spp. (all species)	broom
Hedera canariensis	Algerian ivy
Hedera helix	English ivy
Hypericum spp. (all species)	St. John's Wort
Ipomoea acuminata	Mexican morning glory
Lampranthus spectabilis	trailing ice plant
Lantana camara	common garden lantana
Lantana montevidensis [syn. *L. sellowiana*]	lantana
Limonium perezii	sea lavender
Linaria bipartita	toadflax
Lolium multiflorum	Italian ryegrass
Lolium perenne	perennial ryegrass
Lonicera japonica (incl. 'Halliana')	Japanese honeysuckle
Lotus corniculatus	birdsfoot trefoil

MSHCP Table 6-2. Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area (Continued)

BOTANICAL NAME	COMMON NAME
Lupinus arboreus	yellow bush lupine
Lupinus texanus	Texas blue bonnets
Malephora crocea	ice plant
Malephora luteola	ice plant
Mesembryanthemum nodiflorum	little ice plant
Myoporum laetum	myoporum
Myoporum pacificum	shiny myoproum
Myoporum parvifolium (incl. 'Prostratum')	ground cover myoporum
Oenothera berlandieri	Mexican evening primrose
Olea europea	European olive tree
Opuntia ficus-indica	Indian fig
Osteospermum spp. (all species)	trailing African daisy, African daisy,
Oxalis pes-caprae	Bermuda buttercup
Parkinsonia aculeata	Mexican palo verde
Pennisetum clandestinum	Kikuyu grass
Pennisetum setaceum	fountain grass
Phoenix canariensis	Canary Island date palm
Phoenix dactylifera	date palm
Plumbago auriculata	cape plumbago
Polygonum spp. (all species)	knotweed
Populus nigra 'italica'	Lombardy poplar
Prosopis spp. (all species*)	mesquite
Ricinus communis	castorbean
Robinia pseudoacacia	black locust
Rubus procerus	Himalayan blackberry
Sapium sebiferum	Chinese tallow tree
Saponaria officinalis	bouncing bet, soapwart
Schinus molle	Peruvian pepper tree, California pepper
Schinus terebinthifolius	Brazilian pepper tree
Spartium junceum	Spanish broom
Tamarix spp. (all species)	tamarisk, salt cedar
Trifolium tragiferum	strawberry clover
Tropaelolum majus	garden nasturtium
Ulex europaeus	prickly broom
Vinca major	periwinkle
Yucca gloriosa	Spanish dagger

An asterisk (*) indicates some native species of the genera exist that may be appropriate.

5.0) SUMMARY AND RECOMMENDATIONS

The purpose of this study was to identify biological resources present or potentially present on the site. The MSHCP requires a habitat assessment to address riparian/riverine and vernal pool habitats and associated species and burrowing owl. Focused surveys are required if suitable habitat is present.

L&L also analyzed the potential for impacts to state and federal jurisdictional waters, special status species, and sensitive vegetation communities. The recommendations are based on the literature review, L&L's knowledge of species and habitats in the region, the biological field survey, and analysis of aerial images.

MSHCP

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of PQP Conserved Lands approximately 0.68 miles north-northeast of the site (Ringing Rock Archaeological Site). There are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

Sensitive Vegetation Communities

The site is composed of agricultural lands and disturbed/ruderal areas, California buckwheat scrub, chamise chaparral, arroyo willow thickets, and mulefat thickets. Arroyo willow thickets and mulefat thickets are riparian vegetation communities and arroyo willow thicket is considered sensitive. The majority of arroyo willow thicket will be retained in the Avoidance Area.

Listed and Special Status Plant Species

No state or federally listed plants were observed during surveys and the Project site is not within USFWS designated critical habitat for any listed plant species. Two special status plant species were observed on the site during surveys, long-spined spineflower and southern California black walnut. Both are covered species under the MSHCP and considered adequately conserved.

Trees

There is a single immature coast live oak tree present on the site within the riparian area. Other native and non-native trees are also present. The City may regulate removal or replacement of trees and a tree survey may be required.

Listed and Fully Protected Wildlife Species

Surveys detected two listed or fully protected wildlife species on the site, coastal California gnatcatcher and white-tailed kite.

Multiple surveys from 2004 through 2021 have documented coastal California gnatcatchers on the Project site, including observations of breeding pairs and nesting. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site. Under Mitigation Measure 4.3-1 of the 2006 EIR, the northeastern portion of the property shall be preserved as open space and covered by a conservation easement or similar mechanism. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Focused surveys for this species are not required under the MSHCP. Scheduling Project activities outside the nesting season and/or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended, as described below. Monitoring of active nest sites during Project activities is recommended.

Two white-tailed kites were observed on the Project site in 2005 and one in 2011. No kites have been observed during more recent surveys. Although this species may forage on the Project site and potentially suitable nesting habitat is present, no nesting has been observed there. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

Under Mitigation Measure 4.3-5 of the 2006 EIR, if construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors, including avoidance buffers around active nests. Under this mitigation measure, if white-tailed kite nesting is found on the Project site, an incidental take permit from CDFW is required.

Two other listed species have not been observed on the Project site during surveys but have a moderate or high potential to occur, Stephens' kangaroo rat and tricolored blackbird (foraging). Stephens' kangaroo rat is a covered species under the MSHCP and considered adequately conserved. Focused trapping surveys for this species are not required by the MSHCP. Tricolored blackbird is also a covered species under the MSHCP and considered adequately conserved.

Fairy Shrimp

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys. No fairy shrimp or potential fairy shrimp habitat was observed during current or previous surveys.

Riparian Birds

No least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo have been incidentally detected during surveys. Riparian vegetation onsite is scattered and degraded, the understory is poorly developed, and the streambed does not have persistent water flow. Typical habitat to support least Bell's vireo, southwestern willow flycatcher, and yellow-billed cuckoo is not present and these species are considered absent from the site.

Quino Checkerspot Butterfly

No Quino checkerspot butterfly adults, larvae, or pupae were observed onsite during focused surveys in 2004, although potentially suitable habitat and larval host and nectaring plants are present. This species has not been incidentally observed during any subsequent surveys. Quino checkerspot butterfly is a covered species under the MSHCP and considered adequately conserved. Focused surveys are not required by the MSHCP.

Special Status Wildlife Species

Biological surveys from 2003 to 2021 detected 19 special status wildlife species on the site: orange-throated whiptail, coastal (western) whiptail, coast horned lizard, Cooper's hawk, southern California rufous-crowned sparrow, great egret, great blue heron (fly over), Bell's sage sparrow, burrowing owl, Costa's hummingbird, wrentit, northern harrier, Nuttall's woodpecker, California horned lark, loggerhead shrike, rufous hummingbird, Lawrence's goldfinch, California thrasher, and San Diego black-tailed jackrabbit.

All of these species are covered under the MSHCP and considered adequately conserved, with the exception of great egret, Costa's hummingbird, wrentit, Nuttall's woodpecker, rufous hummingbird, Lawrence's goldfinch, and California thrasher, which are not covered under the MSHCP. Burrowing owl is discussed below. Scheduling Project activities outside the nesting season or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended, as described below.

Five (5) additional special status wildlife species have not been observed on the Project site during L&L surveys but have a low to moderate potential to occur. These species are Crotch bumble bee, southern California legless lizard, Dulzura pocket mouse, northwestern San Diego pocket mouse, and western mastiff bat (foraging). Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP.

Crotch bumble bee was previously a candidate for state listing, but in November 2020 the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act. The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations. If Crotch bumble bee becomes a listed or candidate species, focused surveys and incidental take permitting may be required.

Burrowing Owl

One (1) adult burrowing owl and an occupied burrow were observed onsite in 2018. No owls or owl sign were observed in 2019 or 2021. Because suitable habitat is present, the MSHCP requires a preconstruction clearance survey for burrowing owl within 30 days prior to the start of site disturbance. If burrowing owls are found on the site at that time, additional mitigation is required under the MSHCP and Mitigation Measure 4.3-2 of the 2006 EIR.

Nesting Birds

There is habitat suitable for nesting birds (including raptors) within and adjacent to the site. Nesting birds may utilize trees, shrubs, and other vegetation, and open ground on and adjacent to the site for nesting.

Nesting birds are protected under state and federal laws. Project activities, including initial vegetation trimming/clearing, tree trimming/removal, ground disturbance, etc., should be avoided during the nesting season (generally February 1 to August 31). If the nesting season cannot be avoided, a nesting bird clearance survey is recommended within three (3) days prior to the start of Project activities within the nesting season. If active nests are present, avoidance of nest sites is required and a buffer of 300 to 500 feet (or as determined by a biologist) is recommended until a biologist has verified that juvenile birds are no longer dependent on the nest or the nest has otherwise become inactive. An active nest is defined as a nest with eggs, chicks, or dependent juveniles, or a nest actively being constructed or utilized for reproduction.

Wildlife Corridors

The site is largely surrounded by scattered existing development and there is no connectivity between the site and conserved lands to the east and southwest. Although there may be limited local movement of wildlife on and across the site, it is not within or adjacent to a wildlife corridor or potential corridor.

Jurisdictional Waters/Wetlands and MSHCP Riparian/Riverine and Vernal Pool Habitat

An ephemeral drainage with scattered riparian vegetation is present on the site and mapped as a USGS blue-line stream. A jurisdictional delineation found 0.153 acre of unvegetated state streambed (which is also MSHCP riverine habitat) and 1.208 acre of state wetland (which is also MSHCP riparian habitat). The survey also identified 0.065 acre of federal waters. There is no federal wetland.

All jurisdictional areas onsite will either be impacted by Project development or incorporated into the Avoidance Area. Monitoring of Project activities adjacent to the Avoidance Area is recommended.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

Regulatory permits from USACE, RWQCB, and CDFW will be required for impacts to jurisdictional areas. A DBESP will be required for impacts to MSHCP riparian/riverine habitat. Mitigation Measure 4.3-6 also requires on or off-site replacement of CDFW and federal jurisdictional waters and wetlands at a ratio of no less than 1:1 and incorporation of design features that will avoid biological impacts to offsite blue-line streams that flow to Canyon Lake. Monitoring of Project activities that disturb vegetation or soil in and adjacent to the Avoidance Area is recommended.

6.0) REGULATORY ENVIRONMENT

The following summary of the regulatory environment is provided for information purposes and is not intended for review or comment by the lead or wildlife agencies.

6.1) Federal Endangered Species Act

Section 9 of the federal Endangered Species Act (FESA), 1973 (as amended) prohibits "take" of federally listed threatened and endangered species. Candidate species receive no protection under FESA, but the USFWS encourages conservation of these species. "Take" is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. "Harm" is further defined to include habitat modification or degradation when it actually kills or injures wildlife by impairing essential behavioral patterns including breeding, feeding, or sheltering.

Incidental take is take that results from, but is not the purpose of, carrying out an otherwise lawful activity. Incidental take of federally listed species may be authorized under Section 7 of FESA for federal properties or where federal actions (i.e., federal permitting or federal funding) are involved or under Section 10 of FESA for non-federal actions.

Section 7 requires all Federal agencies, in "consultation" with the USFWS, to ensure that their actions are not likely to jeopardize the continued existence of listed species or result in destruction or adverse modification of critical habitat. The Section 7 process requires preparation of a federal Biological Assessment to determine whether a proposed major construction activity under the authority of a Federal action agency is likely to adversely affect listed species, proposed species, or designated critical habitat. After formal consultation, the USFWS will issue a Biological Opinion stating whether or not a federal action is likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of critical habitat.

Section 10 lays out the guidelines under which a permit may be issued to authorize take of endangered or threatened species (in the absence of any federal nexus). Application for an incidental take permit under Section 10 is subject to certain requirements, including preparation by the permit applicant of a conservation plan, generally known as a "Habitat Conservation Plan" or "HCP." An HCP is a plan that outlines ways of maintaining, enhancing, and protecting a given habitat type needed to protect species. The plan usually includes measures to minimize

impacts, such as provisions for permanently protecting land, restoring habitat, and relocating plants or animals to another area.

6.2) Jurisdictional Waters and Wetlands

Three agencies generally regulate activities within streams, wetlands, and riparian areas in California: (1) the U.S. Army Corps of Engineers (USACE) regulates activities under Section 404 of the federal Clean Water Act; (2) the Regional Water Quality Control Board (RWQCB) regulates activities under Section 401 of the federal Clean Water Act and the State Porter-Cologne Water Quality Control Act; and (3) the California Department of Fish and Wildlife (CDFW) regulates activities under California Fish and Game Code Sections 1600-1616.

6.2.1) Federal Clean Water Act, Section 404

Section 404 of the federal Clean Water Act applies to "Waters of the United States" (WoUS). By definition these include waterways that could be used for interstate commerce and their tributaries, including any waters that flow into traditional navigable waters. In non-tidal waters, the limits of jurisdiction are "ordinary high water marks" (OHWM) such as stream banks.

There have been recent changes to the definition of WoUS and the agencies are interpreting WoUS consistent with the pre-2015 regulatory regime until further notice. Under this rule, WoUS includes:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

2. All interstate waters including interstate wetlands;

3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:

    a. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or

    b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or

c. Which are used or could be used for industrial purposes by industries in interstate commerce;

4. All impoundments of waters otherwise defined as waters of the United States under this definition;

5. Tributaries of waters identified in paragraphs (s)(1) through (4) of this section;

6. The territorial sea;

7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (s)(1) through (6) of this section; waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.11(m) which also meet the criteria of this definition) are not waters of the United States.

Final determination and delineation of federal jurisdiction is made by the USACE and not by the project biologists. Therefore, fieldwork and documentation of the site conditions are done as a preliminary delineation until the USACE reviews and concurs with the results.

6.2.2) Federal Clean Water Act, Section 401 and Porter-Cologne

The RWQCB has jurisdiction over wetlands, WoUS, and Waters of the State under Section 401 of the CWA and the Porter-Cologne Water Quality Control Act (Porter-Cologne) under the California Water Code (§ 13000, et seq.) Permitting is required for activities that will result in a discharge of soils, nutrients, chemicals, detrital materials, or other pollutants into WoUS, Waters of the State, or adjacent wetlands that will affect the water quality of those bodies and the watershed.

6.2.3) California Fish and Game Code, Section 1600

The CDFW, through provisions of the California Fish and Game Code (Sections 1600-1616), is empowered to issue agreements ("Lake and Streambed Alteration Agreements") for projects that will adversely affect wildlife habitat associated with any river, stream, or lake edges. The Lake and Streambed Alteration Agreement will typically include required measures to mitigate impacts.

Sections 1600-1616 of the California Fish and Game Code apply to stream channels, defined elsewhere in the Code as follows:

"A stream is a body of water that flows at least periodically through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation."

The state definition does not specify a flow rate or inundation frequency and provides no clear distinction between jurisdictional and non-jurisdictional lands.

While the federal USACE criteria (hydrology, soils, and vegetation) are used to evaluate the presence or absence of wetlands within the project site, the determination of state wetland status is not based on the combined presence of the three criterion because the state can take jurisdiction of any one of the three: (1) the presence of open water or saturated soils, (2) presence of vegetation including riparian or wetland species, and/or (3) water-modified or oxygen-depleted soils.

6.3) California Endangered Species Act

California Endangered Species Act (CESA) definitions of endangered and threatened species parallel those defined in the FESA. The CESA defines an endangered species as ". . . a native species or subspecies of a bird, mammal, fish, amphibian, reptile or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes including loss of habitat, change in habitat, over exploitation, predation, competition or disease." Endangered species are in serious danger of becoming extinct and threatened species are likely to become endangered species in the foreseeable future (according to Sections 2062 and 2067, respectively, of the California Fish and Wildlife Code). Candidate species are those under formal review by the CDFW for listing as endangered or threatened (Section 2067). Prior to being considered for protected status, the CDFW designates a species as being of special concern. Species of Special Concern are those for which the CDFW has information indicating population decline.

6.4) California Environmental Quality Act

The California Environmental Quality Act (CEQA) and CEQA Guidelines (§ 15000 et seq.) require identification of environmental effects from discretionary projects. Significant effects are to be mitigated by avoidance, minimization, rectification, or compensation whenever possible.

Effects to all state and federal listed species are considered significant under CEQA. In addition to formally listed species, CEQA considers effects to species that are demonstrably endangered or rare as important or significant. These definitions can include state designated species of

special concern, federal candidate and proposed species, California Natural Diversity Database (CNDDB) tracked species, and California Rare Plant Rank (CRPR) 1B and 2 plants.

Appendix G of the CEQA Guidelines specifically addresses biological resources and encompasses a broad range of resources to be considered.

6.5) California Natural Diversity Database

The California Natural Diversity Database (CNDDB) is a database that ranks overall condition of listed and special status species and sensitive vegetation communities on global (throughout its range) and state (within California) levels. The CNDDB includes documented occurrences of listed and special status species that have been reported to CDFW. State ranking is numerical, ranging from one to five (S1 to S5), with one indicating very few remaining individuals or little remaining habitat and five indicating a demonstrably secure to ineradicable population condition. State ranks (S ranks) may also include an extension (e.g., S1.x) indicating current threats ranging from one (very threatened) to three (no current threats known).

6.6) California Rare Plant Rank

The California Native Plant Society (CNPS) Inventory of Rare and Endangered Species includes documented occurrences of special status plant species that are available through the Consortium of California Herbaria and other sources. The CNPS, in coordination with CDFW, has cataloged California's rare and endangered plants into lists according to population distributions and viability. These lists are numbered and indicate the following California Rare Plant Ranks (CRPR): (1A) presumed extinct in California; (1B) rare, threatened, or endangered throughout their range; (2A) presumed extirpated in California, but more common in other states; (2B) threatened or endangered in California, but more common in other states; (3) more information is needed to establish rarity; and (4) plants of limited distribution in California (i.e., naturally rare in the wild), but whose populations do not appear to be susceptible to threat. A CRPR may also have an extension (e.g., 1B.x) that indicates current level of threat: seriously threatened (x.1), moderately threatened (x.2), or not very threatened (x.3).

6.7) Information for Planning and Consultation

The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) is a database that includes federally listed endangered or threatened species and species proposed for listing, designated critical habitat, Birds of Conservation Concern, and other federally regulated lands and biological resources.

6.8) Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711) is an international treaty that made it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 CFR Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Executive Order 13186 ensures that environmental analyses of federal actions required by the National Environmental Policy Act (NEPA) or other established environmental review processes evaluate the effects of actions on migratory birds, with emphasis on species of concern. Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young) or loss of habitat upon which the birds depend could be considered "take."

6.9) California Fish and Game Code, Sections 3503 and 3513

California Fish and Game Code Section 3503 prohibits take, possession, or needless destruction of bird nests or eggs except as otherwise provided by the Code; Section 3503.5 prohibits take or possession of birds of prey or their eggs except as otherwise provided by the Code; and Section 3513 provides for the adoption of the provisions of the federal Migratory Bird Treaty Act, described above.

6.10) Western Riverside County Multiple Species Habitat Conservation Plan

The County of Riverside, including eight (8) additional land jurisdictions and 14 cities, have prepared a Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County. The MSHCP will build upon existing preserves and provide connectivity and wildlife corridors throughout the region. The MSHCP proposes to conserve approximately 500,000 acres and 146 different species.

The MSHCP was approved by the county on June 17, 2003 and an Implementation Agreement (IA) between the USFWS, the CDFW, and the County was executed and an associated USFWS Section 10(a)(1)(B) Permit (No. TE-088609) was issued on June 22, 2004. The permit grants take authorization for certain species identified in the permit as "Covered Species Adequately Conserved."

The MSHCP establishes seven (7) core reserve areas and associated linkages between proposed and existing core areas. The MSHCP divides these areas into Cells using USGS coordinates.

Focused surveys are required for species identified as not adequately conserved under the MSHCP if suitable habitat is present onsite. If focused surveys are determined necessary and species identified as not adequately conserved under the MSHCP occur onsite, the proponent may be required to undergo a Habitat Acquisition and Negotiation Strategy (HANS) determination with the County of Riverside. If a single-family home or mobile home is to be placed on an existing legal lot, permitting will be reviewed according to the procedures outlined in MSHCP Section 6.1.1, *Expedited Review Process for Single-Family Homes or Mobile Homes to Be Located on an Existing Lot within the Criteria Area*.

MSHCP Section 6.1.2 (Riparian/Riverine Habitat)

Section 6.1.2 of the MSHCP requires an assessment of the potentially significant effects of the proposed project on Riparian/riverine areas, and vernal pools as currently required by CEQA using available information augmented by project-specific mapping. Riparian/riverine areas and vernal pools are defined as follows:

- Riparian/riverine Areas are lands that have flow for all or a portion of the year and which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.

- Vernal pools are seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. The determination that an area exhibits vernal pool characteristics, and the definition of the watershed supporting vernal pool hydrology, must be made on a case-by case basis. Such determinations should consider the length of the time the area exhibits upland and wetland characteristics and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be obtained from its history, vegetation, soils, and drainage characteristics, uses, to which it has been subjected, and weather and hydrologic records.

With the exception of wetlands created for the purpose of providing wetlands habitat or resulting from human actions to create open waters or from the alteration of natural stream courses, areas demonstrating characteristics as described above which are artificially created are not included in these definitions.

Burrowing Owl

Section B (Species Accounts) of Volume 2 of the MSHCP (Dudek 2003) lists the following objectives for burrowing owl conservation/protection:

Objective 1

Include within the MSHCP Conservation Area at least 27,470 acres of suitable primary habitat for the burrowing owl including grasslands.

Objective 2

Include within the MSHCP Conservation Area at least 5 Core Areas and interconnecting linkages. Core areas may include the following: (1) Lake Skinner/Diamond Valley Lake area (Existing Core C plus Proposed Extension of Existing Cores 5, 6, 7; 29,060 acres); (2) playa west of Hemet (Proposed Noncontiguous Habitat Block 7; 1,250 acres); (3) San Jacinto Wildlife Area/Mystic Lake area including Lake Perris area (Existing Core H; 17,470 acres); (4) Lake Mathews (Existing Core C plus Proposed Extension of Existing Cores 2; 23,710 acres); and (5) along the Santa Ana River (9,670 acres). The Core Areas should support a combined total breeding population of approximately 120 burrowing owls with no fewer than five pairs in any one Core area.

Objective 3

Include within the MSHCP Conservation Area at least 22,120 acres of suitable secondary habitat for the burrowing owl including playas and vernal pools, and agriculture outside of the Core Areas identified above. Areas where additional suitable habitat could be conserved include west of the Jurupa Mountains, near Temescal Wash (i.e., vicinity of Alberhill), near Temecula Creek, within the Lakeview Mountains, Banning, the Badlands, Gavilan Hills, and Quail Valley.

Objective 4

Include within the MSHCP Conservation Area the known nesting locations of the burrowing owl at Lake Perris, Mystic Lake/San Jacinto Wildlife area, Lake Skinner area, the area around Diamond Valley Lake, playa west of Hemet, Lakeview Mountains, Lake Mathews/Estelle Mountain Reserve and Sycamore Canyon Regional Park.

Objective 5

Surveys for burrowing owl will be conducted as part of the project review process for public and private projects within the burrowing owl survey area where suitable habitat is present (see Burrowing Owl Survey Area Map, Figure 6-4 of the MSHCP, Volume I). The locations of this species determined as a result of survey efforts shall be conserved in accordance with procedures described within Section 6.3.2, MSHCP, Volume I and the guidance provided below:

Burrowing owl surveys shall be conducted utilizing accepted protocols as follows. If burrowing owls are detected on the project site then the action(s) taken will be as follows:

If the site is within the Criteria Area, then at least 90 percent of the area with long-term conservation value will be included in the MSHCP Conservation Area. Otherwise:

1) If the site contains, or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and the surrounding area supports fewer than 3 pairs of burrowing owls, then the on-site burrowing owls will be passively or actively relocated following accepted protocols.

2) If the site (including adjacent areas) supports three or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite.

The survey and conservation requirements stated in this objective will be eliminated when it is demonstrated that Objectives 1 – 4 have been met.

Objective 6

Pre-construction presence/absence surveys for burrowing owl within the survey area where suitable habitat is present will be conducted for all Covered Activities through the life of the permit. Surveys will be conducted within 30 days prior to disturbance. Take of active nests will be avoided. Passive relocation (use of one-way doors and collapse of burrows) will occur when owls are present outside the nesting season.

Objective 7

Translocation sites for the burrowing owl will be created in the MSHCP Conservation Area for the establishment of new colonies. Translocation sites will be identified, taking into consideration unoccupied habitat areas, presence of burrowing mammals to provide suitable burrow sites, existing colonies and effects to other Covered Species. Reserve Managers will consult with the Wildlife Agencies regarding site selection prior to translocation site development.

APPENDIX A: PLANT AND WILDLIFE SPECIES

Plant and wildlife species identified on the Golden Meadows site during surveys from 2003 to 2021. One asterisk (*) indicates a non-native species; two asterisks (**) indicates a special status species; a question mark (?) indicates uncertainty regarding identification or native status. The list includes common butterfly species that were observed during Quino checkerspot butterfly surveys in 2004 but does not represent a complete inventory of insects present.

	Scientific Name	**Common Name**
	VASCULAR PLANTS	
	DICOTYLEDONS	
	ADOXACEAE	MUSKROOT FAMILY
	Sambucus nigra ssp. cerulea (S. mexicana)	Mexican elderberry, blue elderberry
	AMARANTHACEAE	AMARANTH FAMILY
*	*Amaranthus albus*	Tumbleweed, tumbling pigweed
	ANACARDIACEAE	SUMAC or CASHEW FAMILY
*	*Schinus molle*	Peruvian pepper tree
	APIACEAE	CELERY FAMILY
	Daucus pusillus	Rattlesnake weed, wild carrot
	ASTERACEAE	ASTER FAMILY
	Acourtia microcephala (Perezia microcephala)	Scapellote, perezia
	Ambrosia acanthicarpa	Annual bur-sage, annual sandbur
*	*Anthemis cotula*	Mayweed, dog mayweed
	Artemisia californica	California sagebrush
	Baccharis salicifolia (B. glutinosa)	Mulefat
	Bebbia juncea	Sweetbush
*	*Centaurea melitensis*	Tocalote
	Chaenactis artemisiifolia	White pincushion, wormwood pincushion
	Corethrogyne filaginifolia var. filaginifolia (Lessingia filaginifolia)	California-aster, sand-aster
	Deinandra fasciculata (Hemizonia fasciculata)	Fascicled tarplant, slender tarweed
	Encelia farinosa	Brittlebush
*	*Erigeron bonariensis (Conyza bonariensis)*	Flax-leaved horseweed
	Erigeron canadensis (Conyza canadensis)	Horseweed, mare's tail
	Eriophyllum confertiflorum	Golden-yarrow

	Scientific Name	**Common Name**
	Eriophyllum multicaule	Many-stem woolly daisy
	Gutierrezia californica (G. bracteata)	California matchweed
	Helianthus annuus	Western sunflower
	Helianthus gracilentus	Slender sunflower
*	*Lactuca serriola*	Prickly lettuce
	Lasthenia californica (L. chrysostoma)	California goldfields
	Layia platyglossa	Tidy-tips
	Logfia filaginoides (Filago californica)	California filago
*	*Matricaria discoidea (Chamomilla suaveolens, M. matricarioides)*	Pineapple weed
*	*Oncosiphon pilulifer (Matricaria globosa)*	Stinknet
	Rafinesquia californica	California chicory
*	*Senecio vulgaris*	Common groundsel
*	*Sonchus oleraceus*	Common sow thistle
	Stephanomeria virgata	Wreath plant
	Stylocline gnaphaloides	Everlasting neststraw
	Tetradymia comosa	Hairy horsebrush, common-thorn
	Uropappus lindleyi (Microseris lindleyi, M. linearifolia)	Silverpuffs
*?	*Xanthium spinosum*	Spiny cocklebur
	BORAGINACEAE	BORAGE OR WATERLEAF FAMILY
	Amsinckia intermedia (A. menziesii var. intermedia)	Large flower rancher's fiddleneck
	Cryptantha species	Unid. cryptantha
	Cryptantha intermedia	Common cryptantha
	Heliotropium curassavicum	Wild heliotrope
	Pectocarya linearis	Slender pectocarya
	Phacelia minor	Wild Canterbury bells
	Phacelia ramosissima	Branching phacelia
	Plagiobothrys species	Popcornflower
	BRASSICACEAE	MUSTARD FAMILY
*	*Brassica nigra*	Black mustard
*	*Hirschfeldia incana (Brassica geniculata)*	Shortpod mustard
	Lepidium nitidum	Shining peppergrass
*	*Raphanus sativus*	Wild radish
*	*Sisymbrium irio*	London rocket
*	*Sisymbrium orientale*	Wild mustard, hare's ear cabbage
	Thysanocarpus curvipes	Fringepod

	Scientific Name	**Common Name**
	CACTACEAE	CACTUS FAMILY
	Cylindropuntia californica var. parkeri (Opuntia parryi)	Valley cholla
	CHENOPODIACEAE	GOOSEFOOT FAMILY
*	*Atriplex suberecta*	Sprawling saltbush, Australian saltbush
*	*Chenopodium murale*	Nettle-leaved goosefoot, lamb's quarters
*	*Salsola tragus*	Russian thistle
	CONVOLVULACEAE	MORNING-GLORY FAMILY
	Calystegia macrostegia	Morning-glory
	Cuscuta californica	Chaparral dodder, witch's hair
	CRASSULACEAE	STONECROP FAMILY
	Crassula connata (C. erecta)	Pygmy-weed, pygmy stonecrop
	CUCURBITACEAE	GOURD FAMILY, CUCUMBER FAMILY
	Cucurbita foetidissima	Calabazilla
	Marah macrocarpa	Chilicothe, wild cucumber
	EUPHORBIACEAE	SPURGE FAMILY
	Croton setiger (C. setigerus, Eremocarpus setiger, E. setigerus)	Turkey-mullein, doveweed
	Euphorbia albomarginata (Chamaesyce albomarginata)	Rattlesnake sandmat, rattlesnake weed
	FABACEAE	LEGUME FAMILY, PEA FAMILY
	Acmispon americanus (Lotus purshianus, L. unifoliatus)	"Spanish" clover
	Acmispon glaber (Lotus scoparius)	Deerweed
	Lupinus species	Unid. lupine
	Lupinus bicolor	Miniature lupine, dove lupine
*	*Medicago polymorpha*	California burclover
*	*Vicia villosa*	Winter vetch
	FAGACEAE	OAK FAMILY
	Quercus agrifolia	Coast live oak
	GERANIACEAE	GERANIUM FAMILY
*	*Erodium botrys*	Long-beak filaree
*	*Erodium cicutarium*	Redstem filaree
	JUGLANDACEAE	WALNUT FAMILY
**	*Juglans californica*	Southern California black walnut

	Scientific Name	**Common Name**
	LAMIACEAE	MINT FAMILY
*	*Lamium amplexicaule*	Common henbit
*	*Marrubium vulgare*	Horehound
	Salvia apiana	White sage
	Salvia columbariae	Chia
	Salvia mellifera	Black sage
	Trichostema lanceolatum	Vinegar weed
	MALVACEAE	MALLOW FAMILY
*	*Malva parviflora*	Cheeseweed
	MYRSINACEAE	MYRSINE FAMILY
*	*Lysimachia (Anagallis) arvensis*	Scarlet pimpernel
	MYRTACEAE	MYRTLE FAMILY, EUCALYPTUS FAMILY
*	*Eucalyptus species*	Ornamental eucalyptus, gumtree
	NYCTAGINACEAE	FOUR O'CLOCK FAMILY
	Mirabilis laevis var. crassifolia (M. californica)	Wishbone bush
	ONAGRACEAE	EVENING-PRIMROSE FAMILY
	Camissonia species	Unid. evening-primrose
	Eulobus californica (Camissonia californica)	California false mustard, mustard evening primrose
	PAPAVERACEAE	POPPY FAMILY
	Eschscholzia californica	California poppy
	PHRYMACEAE	LOPSEED FAMILY
	Diplacus (Mimulus) aurantiacus (M. puniceus, M. longiflorus)	Bush monkeyflower, sticky monkeyflower
	Erythranthe (Mimulus) guttatus	Seep monkeyflower
	PLANTAGINACEAE	PLANTAIN FAMILY
	Antirrhinum nuttallianum	Nuttall snapdragon, violet snapdragon
	Keckiella antirrhinoides	Yellow bush-penstemon
	Plantago erecta	California plantain
	POLEMONIACEAE	PHLOX FAMILY
	Eriastrum sapphirinum	Sapphire woollystar
	Navarretia hamata	Hooked navarretia
	POLYGONACEAE	BUCKWHEAT FAMILY
	Chorizanthe fimbriata	Fringed spineflower
**	*Chorizanthe polygonoides var. longispina*	Long-spined spineflower
	Eriogonum fasciculatum var. foliolosum	Leafy California wild buckwheat, interior California buckwheat

	Scientific Name	**Common Name**
	Eriogonum fasciculatum var. polifolium	Mojave Desert California buckwheat
*	*Polygonum aviculare (P. arenastrum)*	Common knotweed
*	*Rumex crispus*	Curly dock
	PORTULACACEAE	PURSLANE FAMILY
*	*Portulaca oleracea*	Common purslane
	ROSACEAE	ROSE FAMILY
	Adenostoma fasciculatum	Chamise
	RUBIACEAE	MADDER FAMILY, COFFEE FAMILY
*?	*Galium aparine*	Goose grass, annual bedstraw
	SALICACEAE	WILLOW FAMILY
	Populus fremontii ssp. fremontii	Fremont cottonwood
	Salix gooddingii	Goodding's black willow
	Salix lasiolepis	Arroyo willow
	SCROPHULARIACEAE	FIGWORT FAMILY, SNAPDRAGON FAMILY
	Scrophularia californica	California figwort, coast figwort
	SOLANACEAE	NIGHTSHADE FAMILY
	Datura wrightii (D. meteloides)	Jimsonweed, tolguacha
*	*Nicotiana glauca*	Tree tobacco
	Solanum americanum (S. nodiflorum)	White nightshade
	TAMARICACEAE	TAMARISK FAMILY
*	*Tamarix species*	Unid. tamarisk
	URTICACEAE	NETTLE FAMILY
*	*Urtica urens*	Dwarf nettle
	ZYGOPHYLLACEAE	CALTROP FAMILY
*	*Tribulus terrestris*	Puncture vine
	MONOCOTYLEDONS	
	AGAVACEAE	CENTURY PLANT FAMILY, AGAVE FAMILY
	Hesperoyucca whipplei (Yucca whipplei)	Chaparral yucca
	LILIACEAE	LILY FAMILY
	Calochortus splendens	Splendid mariposa lily
	POACEAE	GRASS FAMILY
*	*Avena barbata*	Slender wild oat
*	*Avena fatua*	Wild oat

	Scientific Name	**Common Name**
*	*Bromus species*	Non-native brome
*	*Bromus diandrus (B. rigidus)*	Ripgut brome
*	*Bromus rubens (B. madritensis ssp. rubens)*	Red brome
*	*Digitaria sanguinalis*	Hairy crabgrass
*	*Festuca species (Vulpia species)*	Annual fescue
*	*Hordeum murinum*	Wall barley, hare barley
*	*Lamarckia aurea*	Goldentop grass
*	*Phalaris species*	Unid. canary grass
*	*Schismus barbatus*	Mediterranean grass
*	*Triticum aestivum*	Wheat
	THEMIDACEAE	BRODIAEA FAMILY
	Dichelostemma capitatum (D. pulchella, Brodiaea pulchella)	Blue dicks, wild hyacinth
	Muilla maritima	Common muilla, rough muilla

	Scientific Name	**Common Name**
	VERTEBRATES	
	Reptiles	
	Colubridae	Colubrid Snakes
	Pituophis catenifer	Gopher snake
	Phrynosomatidae	Spiny Lizards
**	*Phrynosoma blainvillii*	Coast horned lizard
	Sceloporus occidentalis	Western fence lizard
	Sceloporus orcutti	Granite spiny lizard
	Uta stansburiana	Side-blotched lizard
	Teiidae	Teiid Lizards
**	*Aspidoscelis hyperythra*	Orange-throated whiptail
**	*Aspidoscelis tigris stejnegeri*	Coastal (western) whiptail
	Birds	
	Accipitridae	Hawks, Eagles, and Harriers
**	*Accipiter cooperii*	Cooper's hawk
	Buteo jamaicensis	Red-tailed hawk
	Buteo lineatus	Red-shouldered hawk
**	*Circus hudsonius (C. cyaneus)*	Northern harrier
**	*Elanus leucurus*	White-tailed kite
	Aegithalidae	Long-tailed Tits
	Psaltriparus minimus	Bushtit
	Alaudidae	Larks
**	*Eremophila alpestris actia*	California horned lark
	Anatidae	Ducks, Geese, Swans
	Anas platyrhynchos	Mallard (fly over)
	Apodidae	Swifts
	Aeronautes saxatalis	White-throated swift
	Ardeidae	Herons
**	*Ardea alba*	Great egret
**	*Ardea herodias*	Great blue heron (fly over)
	Cardinalidae	Cardinals
	Passerina amoena	Lazuli bunting
	Cathartidae	Vultures
	Cathartes aura	Turkey vulture

Charadriidae		Plovers
	Charadrius vociferus	Killdeer
Columbidae		Pigeons and Doves
*	*Columba livia*	Rock dove, common pigeon
	Zenaida macroura	Mourning dove
Corvidae		Crows and Jays
	Aphelocoma californica	California scrub jay
	Corvus brachyrhynchos	American crow
	Corvus corax	Common raven
Cuculidae		Cuckoos
	Geococcyx californianus	Greater roadrunner
Falconidae		Falcons
	Falco sparverius	American kestrel
Fringillidae		Finches
**	*Spinus (Carduelis) lawrencei*	Lawrence's goldfinch
	Spinus (Carduelis) psaltria	Lesser goldfinch
	Spinus (Carduelis) tristes	American goldfinch
	Haemorhous (Carpodacus) mexicanus	House finch
Hirundinidae		Swallows
	Hirundo rustica	Barn swallow
	Petrochelidon pyrrhonota tachina	Cliff swallow
	Stelgidopteryx serripennis	Northern rough-winged swallow
	Tachycineta thalassina	Violet-green swallow
Icteridae		Blackbirds
	Agelaius phoeniceus	Red-winged blackbird
	Euphagus cyanocephalus	Brewer's blackbird
	Icterus bullockii	Bullock's oriole
	Sturnella neglecta	Western meadowlark
Laniidae		Shrikes
**	*Lanius ludovicianus*	Loggerhead shrike
Mimidae		Mockingbirds
	Mimus polyglottos	Northern mockingbird
**	*Toxostoma redivivum*	California thrasher
Motacillidae		Wagtails and Pipits
	Anthus rubescens	American pipit
Odontophoridae		Quail
	Callipepla californica	California quail

Parulidae		Wood Warblers
	Geothlypis tolmiei	MacGillivray's warbler
	Oreothlypis celata	Orange-crowned warbler
	Setophaga coronata	Yellow-rumped warbler
Passerellidae		New World Sparrows
**	*Aimophila ruficeps canescens*	Southern California rufous-crowned sparrow
**	*Artemisiospiza belli*	Bell's sage sparrow
	Chondestes grammacus	Lark sparrow
	Melospiza melodia	Song sparrow
	Melozone crissalis	California towhee
	Passerculus sandwichensis	Savannah sparrow
	Pipilo maculatus	Spotted towhee
	Pooecetes gramineus	Vesper sparrow
	Spizella passerina	Chipping sparrow
	Zonotrichia leucophrys	White-crowned sparrow
Passeridae		Old World Sparrows
*	*Passer domesticus*	House sparrow
Picidae		Woodpeckers
	Colaptes auratus	Northern flicker
**	*Dryobates (Picoides) nuttallii*	Nuttall's woodpecker
Polioptilidae		Gnatcatchers
	Polioptila caerulea	Blue-gray gnatcatcher
**	*Polioptila californica*	Coastal California gnatcatcher
Strigidae		Owls
**	*Athene cunicularia*	Burrowing owl
Sturnidae		Starlings
*	*Sturnus vulgaris*	European starling
Timaliidae		Babblers
**	*Chamaea fasciata*	Wrentit
Trochilidae		Hummingbirds
	Calypte anna	Anna's hummingbird
**	*Calypte costae*	Costa's hummingbird
**	*Selasphorus rufus*	Rufous hummingbird
Troglodytidae		Wrens
	Catherpes mexicanus	Canyon wren
	Salpinctes obsoletus	Rock wren
	Thryomanes bewickii	Bewick's wren
	Troglodytes aedon	House wren
Turdidae		Thrushes
	Sialia mexicana	Western bluebird

Tyrannidae	Tyrant Flycatchers
Empidonax wrightii	Gray flycatcher
Myiarchus cinerascens	Ash-throated flycatcher
Sayornis nigricans	Black phoebe
Sayornis saya	Say's phoebe
Tyrannus verticalis	Western kingbird
Tyrannus vociferans	Cassin's kingbird

Mammals

Canidae	Dogs, Foxes, and Coyotes
Canis familiaris	Domestic dog
Canis latrans	Coyote
Geomyidae	Pocket Gophers
Thomomys bottae	Botta's pocket gopher (sign)
Leporidae	Rabbits
** *Lepus californicus bennettii*	San Diego black-tailed jackrabbit
Sylvilagus audubonii	Audubon's cottontail
Sciuridae	Squirrels
Spermophilus beecheyi	California ground squirrel

INVERTEBRATES

Lepidoptera	**Butterflies and Moths**
Papilionidae	Swallowtails
Papilio rutulus	Western tiger swallowtail
Papilio zelicaon	Anise swallowtail
Nymphalidae	Brush-footed butterflies
Euphydryas chalcedona	Chalcedon checkerspot
Junonia coenia	Buckeye
Vanessa cardui	Painted lady
Vanessa annabella	West coast lady
Vanessa virginiensis	Virginia lady
Lycaenidae	Blues, Hairstreaks, Coppers
Glaucopsyche lygdamus australis	Southern blue
Icaricia acmon	Acmon blue
Pieridae	Whites and Sulfurs
Anthocharis sara	Sara orange-tip
Anthocharis cethura	Felder's orange-tip
Pontia protodice	Checkered white

Riodinidae	Metalmarks
Apodemia mormo virgulti	Behr's metalmark
Hesperiidae	Skippers
Erynnis funeralis	Funereal duskywing
Pyrgus communis albescens	Small checkered skipper

APPENDIX B: SPECIAL STATUS SPECIES POTENTIALS FOR OCCURRENCE

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Plants				
Abronia villosa var. aurita Chaparral sand-verbena	Annual herb. Sandy soils in chaparral, coastal scrub, desert dunes at 75-1600m elevation. Riverside, San Bernardino, Imperial, San Diego, Orange Cos. (presumed extirpated in Orange Co.), Arizona, Baja.	(Jan)Mar-Sep	Fed: None Calif: S2 CRPR: 1B.1	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Allium marvinii Yucaipa onion	Perennial bulbiferous herb. Clay soils in openings in chaparral at 760-1065m. Riverside, San Bernardino, Orange, San Diego Cos.	Apr-May	Fed: None Calif: S1 CRPR: 1B.2 MSHCP: AC b USFS: S	Not expected; potentially suitable habitat, below elevation range, no documented occurrences within 5 mi., not observed during surveys.
Allium munzii Munz's onion	Perennial bulbiferous herb. Mesic, clay soils in chaparral, cismontane woodland, coastal scrub, pinyon juniper woodland, valley and foothill grassland at 297-1070m elevation. Western Riverside Co.	Mar-May	Fed: END Calif: THR, S1 CRPR: 1B.1 MSHCP: AC b	Low; no or marginal habitat, three documented occurrences within 5 mi. (from 1897, Menifee area – exact location unknown, mapped 4.5 mi. NE of site; 1962, exact location unknown, mapped 2.7 mi. NW; from 2015, 2.5 mi. SE), not observed during surveys.
Almutaster pauciflorus Alkali marsh aster	Perennial herb. Alkaline soils in meadows and seeps at 240 to 800m elevation. Inyo, Kern, Riverside, and San Bernardino Cos., SW and North-Central US, and Mexico.	Jun-Oct	Fed: None Calif: S1S2 CRPR: 2B.2	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Ambrosia pumila San Diego ambrosia	Perennial rhizomatous herb. Sandy or clay soils, often in disturbed areas, sometimes alkaline. Chaparral, coastal scrub, valley and foothill grassland, and vernal pools at 20-415m elevation. Riverside, San Diego Co., Baja.	Apr-Oct	Fed: END Calif: S1 CRPR: 1B.1 MSHCP: AC b	Not expected; potentially suitable habitat, above elevation range, no documented occurrences within 5 mi., not observed during surveys.
Amsinckia douglasiana Douglas' fiddleneck	Annual herb. Monterey shale, dry soils in cismontane woodland, valley and foothill grassland at sea level to 1950m elevation. Central coast of CA, few observations in southern CA. Not tracked in the CNDDB.	Mar-May	Fed: None Calif: S4 CRPR: 4.2	Not expected; no or marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Arctostaphylos rainbowensis Rainbow manzanita	Perennial evergreen shrub. Chaparral at 205-670m elevation. Riverside and San Diego Cos.	Dec-Mar	Fed: None Calif: S2 CRPR: 1B.1 MSHCP: AC BLM: S USFS: S	Absent; potentially suitable habitat, no documented occurrences within 5 mi., conspicuous plant not observed during surveys.
Astragalus pachypus var. jaegeri Jaeger's milk-vetch	Perennial shrub. Sandy or rocky soils in chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 365-975m elevation. Riverside and San Diego Cos.	Dec-Jun	Fed: None Calif: S1 CRPR: 1B.1 MSHCP: AC USFS: S BLM: S	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Atriplex coronata var. notatior San Jacinto Valley crownscale	Annual herb. Alkaline soils in playas, mesic areas of valley and foothill grassland, vernal pools at 139-500m elevation. Western Riverside Co.	Apr-Aug	Fed: END Calif: S1 CRPR: 1B.1 MSHCP: AC d	Not expected; no suitable habitat, no documented occurrences within 5 mi. not observed during surveys.
Atriplex parishii Parish's brittlescale	Annual herb. Alkaline soils in chenopod scrub, playas, vernal pools at 25-1900m elevation; Riverside, San Bernardino, LA, Orange, and San Diego Cos. and Baja. Presumed extirpated in LA, Orange, and San Bernardino Cos.	Jun - Oct	Fed: None Calif: S1 CRPR: 1B.1 MSHCP: AC d USFS: S	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Atriplex serenana var. davidsonii Davidson's saltscale	Annual herb. Alkaline soils in coastal bluff scrub, coastal scrub at 10-200m elevation; Channel Islands, LA, Orange, Riverside, San Luis Obispo, Santa Barbara, and Ventura Cos. Presumed extirpated in Santa Barbara Co., possibly extirpated in LA Co.	Apr - Oct	Fed: None Calif: S1 CRPR: 1B.2 MSHCP: AC d	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Ayenia compacta California ayenia	Perennial herb. Rocky soils in Mojavean and Sonoran desert scrub at 150-1095m elevation. Riverside, San Bernardino, San Diego Cos., Arizona, Sonora and Baja Mexico.	Mar-Apr	Fed: None Calif: S3 CRPR: 2B.3	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Brodiaea filifolia Thread-leaved brodiaea	Perennial bulbiferous herb. Often on clay soils in chaparral openings, cismontane woodland, coastal scrub, playas, valley and foothill grassland, and vernal pools at 25-1120m elevation. LA, Orange, Riverside, San Bernardino, and San Diego Cos.; scattered in Southern CA foothills & valleys.	Mar-Jun	Fed: THR Calif: END, S2 CRPR: 1B.1 MSHCP: AC d	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Brodiaea santarosae Santa Rosa Basalt brodiaea	Perennial bulbiferous herb. Basalt in valley and foothill grassland. Santa Rosa Plateau, Riverside and San Diego Cos.	May-Jun	Fed: None Calif: S1 CRPR: 1B.2 USFS: S	Absent; no suitable habitat, outside geographic range, no documented occurrences within 5 mi., not observed during surveys.
Calochortus catalinae Catalina mariposa-lily	Perennial bulbiferous herb. Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 15-700m elevation. LA, Orange, Riverside, San Bernardino, Santa Barbara, Ventura Co, some Channel Islands. Not tracked in CNDDB.	(Feb)Mar-Jun	Fed: None Calif: S3S4 CRPR: 4.2	Low; potentially suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Calochortus plummerae Plummer's mariposa lily	Perennial bulbiferous herb. Granitic rocky soils in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, valley and foothill grassland at 100-1700m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos.	May-Jul	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Calochortus weedii var. intermedius Intermediate mariposa lily	Perennial bulbiferous herb. Rocky, calcareous soils in chaparral, coastal scrub, valley and foothill grassland at 105-855m elevation. LA, Orange, San Bernardino, and western Riverside Co.	May-Jul	Fed: None Calif: S3 CRPR: 1B.2 USFS: S MSHCP: AC	Low; potentially suitable habitat, two documented occurrences within 5 mi. (2003, 3.5 mi. S; 2015, 4.2 mi. SE), not observed during surveys.
Carex buxbaumii Buxbaum's sedge	Perennial rhizomatous herb. Bogs and fens, mesic meadows and seeps, marshes and swamps at 3-3300m elevation. Most of US, northern CA, one occurrence reported near Lake Elsinore in Riverside Co. Not tracked in CNDDB.	Mar-Aug	Fed: None Calif: S3 CRPR: 4.2	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Caulanthus simulans Payson's jewelflower	Annual herb. Chaparral, coastal scrub at 90-2200m elevation. North-facing slopes and ridgelines on sandy-granitic soils, frequently on steep rocky slopes, in burned areas, or disturbed sites such as streambeds. Orange, western Riverside, San Diego Cos.	(Feb)Mar-May(Jun)	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Centromadia pungens ssp. *laevis* Smooth tarplant	Annual herb. Alkaline soils in chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grassland at 0-640m elevation. Also fallow fields, drainage ditches; mainly in SW Riverside Co., a few sites in interior valleys of LA, San Bernardino, San Diego Cos.	Apr-Sep	Fed: None Calif: S2 CRPR: 1B.1 MSHCP: AC d	Moderate; potentially suitable habitat, 11 documented occurrences within 5 mi. (1999 thru 2021, closest is 0.7 mi. NNW), not observed during surveys.
Chorizanthe leptotheca Peninsular spineflower	Annual herb. Granitic soils and alluvial fans in chaparral, coastal scrub, lower montane coniferous forest at 300-1900m elevation. Riverside, San Bernardino, LA, San Diego, Kern, San Luis Obispo Cos., Baja. Not tracked in the CNDDB.	May-Aug	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, one mapped CCH record within 5 mi. (1893, mapped 2.1 mi. NE), not observed during surveys.
Chorizanthe parryi var. *parryi* Parry's spineflower	Annual herb. Sandy or rocky soils and openings in chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 275-1220m elev. LA, Riverside, San Bernardino Cos.	Apr-Jun	Fed: None Calif: S2 CRPR: 1B.1 USFS: S BLM: S MSHCP: AC	Moderate; potentially suitable habitat, 18 documented occurrences within 5 mi. (1998 thru 2017, closest is 0.9 mi. SW), not observed during surveys.
Chorizanthe polygonoides var. longispina Long-spined spineflower	Annual herb. Often on clay soils in chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools at 30-1530m elevation. Orange, Riverside, San Diego Cos., Baja.	Apr-Jul	Fed: None Calif: S3 CRPR: 1B.2 MSHCP: AC	Occurs; observed on site during surveys in 2017.
Clinopodium chandleri San Miguel savory	Perennial shrub. Rocky, gabbroic, or metavolcanic soils in chaparral, cismontane woodlands, coastal scrub, riparian woodland, valley and foothill grassland at 120-1075m elevation. Orange, Riverside, San Diego Co., Baja.	Mar-Jul	Fed: None Calif: S2 CRPR: 1B.2 MSHCP: AC b BLM: S USFS: S	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Convolvulus simulans Small-flowered morning-glory	Annual herb. Clay soils, serpentinite seeps, chaparral openings, coastal scrub, valley and foothill grassland at 30-740m elevation. LA, Orange, Riverside, San Bernardino, San Diego Cos. and Central CA, Baja. Not tracked in CNDDB.	Mar-Jul	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low to moderate; potentially suitable habitat, nine mapped CCH records within 5 mi. (1991-2018, all about 2.5 mi. SE), not observed during surveys.
Cryptantha wigginsii Wiggins' cryptantha	Annual herb. Coastal scrub at 20-275m elevation, often on clay soils. LA, Riverside, San Diego Cos., Catalina Island, and Baja.	Feb-Jun	Fed: None Calif: S1 CRPR: 1B.2	Not expected; potentially suitable habitat, above elevation range, no documented occurrences within 5 mi., not observed during surveys.
Deinandra (Hemizonia) paniculata Paniculate tarplant	Annual herb. Usually vernally mesic areas, sometimes sandy. Coastal scrub, valley and foothill grassland, vernal pools at 25-940m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura, Kern, Santa Barbara, San Luis Obispo Cos., Baja. Not tracked in the CNDDB.	(Mar) Apr-Nov	Fed: None Calif: S4 CRPR: 4.2	Low; potentially suitable or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Dodecahema leptoceras Slender-horned spineflower	Annual herb. Open, sandy alluvial benches in valleys & canyons. Chaparral, coastal scrub (alluvial fans), cismontane woodland at 200-760m elevation. LA, Riverside, San Bernardino Cos.	Apr-Jun	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC b	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Dudleya multicaulis Many-stemmed dudleya	Perennial herb. Often on clay soils in chaparral, coastal scrub, valley and foothill grassland at 15-790m elevation. LA, Orange, Riverside, San Bernardino, San Diego Cos.	Apr-Jul	Fed: None Calif: S2 CRPR: 1B.2 USFS: S MSHCP: AC b	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Eryngium aristulatum var. parishii San Diego button-celery	Annual/perennial herb. Mesic areas in coastal scrub, valley and foothill grassland, vernal pools at 20-620m elevation. Riverside, LA, Orange, San Diego Cos. and Baja.	Apr-Jun	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Erythranthe diffusa Palomar monkeyflower	Annual herb. Sandy or gravelly soils in chaparral, lower montane coniferous forest at 1220-1830m elevation. Orange, Riverside, San Diego Co., Baja. Not tracked in the CNDDB.	Apr-Jun	Fed: None Calif: S3 CRPR: 4.3	Absent; no or marginal habitat, well below elevation range, no mapped CCH records within 5 mi., not observed during surveys.
Geothallus tuberosus Campbell's liverwort	Ephemeral liverwort. Grows on soil in mesic coastal scrub, vernal pools at 10-600m elevation. Riverside and San Diego Cos.	Not applicable	Fed: None Calif: S2 CRPR: 1B.1	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Harpagonella palmeri Palmer's grapplinghook	Annual herb. Clay soils and open grassy areas within shrubland in chaparral, coastal scrub, valley and foothill grassland at 20-955m elevation. LA, Orange, Riverside, San Diego Co., Catalina Island, AZ, Baja and Sonora, Mexico.	Mar-May	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, one documented occurrence within 5 mi. (1981, 2.4 mi. SE), not observed during surveys.
Hesperocyparis forbesii Tecate cypress	Perennial evergreen tree. Clay, gabbroic, or metavolcanic soils in closed-cone coniferous forest, chaparral at 80-1500m elevation. Orange, Riverside, San Diego Co., Baja.	Not applicable	Fed: None Calif: S2 CRPR: 1B.1	Absent; no or marginal habitat, no documented occurrences within 5 mi., conspicuous plant not observed during surveys.
Holocarpha virgata ssp. elongata Graceful (curving) tarplant	Annual herb. Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 60-1100m elevation. Orange, Riverside, San Diego Cos. Known in Riverside County only from the Santa Rosa Plateau. Not tracked in CNDDB.	May-Nov	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; potentially suitable habitat, outside geographic range, no mapped CCH records within 5 mi., not observed during surveys.
Hordeum intercedens Vernal barley	Annual grass. Saline flats and depressions in valley and foothill grassland, vernal pools, coastal dunes, coastal scrub at 5-1000m elevation. LA, Orange, Riverside, San Diego Cos., Central CA, Channel Islands. Not tracked in the CNDDB.	Mar-Jun	Fed: None Calif: S3S4 CRPR: 3.2 MSHCP: AC	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Juglans californica Southern California black walnut	Perennial deciduous tree. Alluvial soils in chaparral, cismontane woodland, coastal scrub, riparian woodland at 50-900m elevation. LA, Orange, Riverside, Santa Barbara, San Bernardino, San Diego, Ventura Cos., Central and Northern CA. Not tracked in CNDDB.	Mar-Aug	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Occurs; observed onsite during surveys.
Juncus acutus ssp. leopoldii Southwestern spiny rush	Perennial rhizomatous herb. Mesic coastal dunes, alkaline seeps, coastal salt marshes at 3-900m elevation. S CA, central coast, AZ, NV, other areas. Not tracked in CNDDB.	(Mar)May-Jun	Fed: None Calif: S4 CRPR: 4.2	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Juncus luciensis Santa Lucia dwarf rush	Annual herb. Chaparral, Great Basin scrub, lower montane coniferous forest, meadows and seeps, vernal pools at 300-2040m elevation. Riverside and San Diego Cos., central and northern CA.	Apr-Jul	Fed: None Calif: S3 CRPR: 1B.2 USFS: S	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Lasthenia glabrata spp. coulteri Coulter's goldfields	Annual herb. Coastal salt marshes and swamps, playas, vernal pools at 1-1220m elevation. Riverside, San Bernardino, LA, Orange, Ventura Cos., Central and Northern CA, Baja. Presumed extirpated in LA, San Bernardino Cos.	Feb-Jun	Fed: None Calif: S2 CRPR: 1B.1 BLM: S MSHCP: AC d	Absent; no suitable habitat, three documented occurrences within 5 mi. (2003, 1.7 mi. N, appears to be developed; 2011, 3.3 mi. SE; 2015, 2.7 mi. NW), not observed during surveys.
Lathyrus splendens Pride-of-California	Perennial herb. Chaparral at 200-1525m elevation. LA, Riverside, San Bernardino Cos., Baja. Not tracked in CNDDB.	Mar-Jun	Fed: None Calif: S4 CRPR: 4.3	Not expected; potentially marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.
Lepidium virginicum var. *robinsonii* Robinson's pepper-grass	Annual herb. Chaparral, coastal scrub at 1-885m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura, Santa Barbara, Mono Cos., Channel Islands, Baja.	Jan-Jul	Fed: None Calif: S3 CRPR: 4.3	Low; potentially suitable habitat, two documented occurrences within 5 mi. (2006, 2.0 mil SSW; 2008, 3.3 mi. N), not observed during surveys.
Lilium humboldtii ssp. ocellatum Ocellated Humboldt lily	Perennial bulbiferous herb. Openings in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, riparian woodland at 30-1800m elevation. LA, Orange, Riverside, Santa Barbara, San Bernardino, San Diego, Ventura Co, some Channel Islands. Lower stream benches in riparian corridors in lower montane coniferous forest and coastal chaparral or shaded, dry slopes beneath a dense oak or conifer canopy.	Mar-Jul(Aug)	Fed: None Calif: S4? CRPR: 4.2 MSHCP: NAC f	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Lilium parryi Lemon lily	Perennial bulbiferous herb. Mesic soils in upper and lower montane coniferous forest, riparian forest, meadows and seeps at 1220-2745m elevation. LA, Riverside, San Bernardino, San Diego Co, Arizona, Sonora Mex.	Jul-Aug	Fed: None Calif: S3 CRPR: 1B.2 USFS: S MSHCP: NAC f	Absent; no suitable habitat, well below elevation range, no documented occurrences within 5 mi., not observed during surveys.
Limnanthes alba ssp. parishii Parish's meadowfoam	Annual herb. Vernally mesic areas in lower montane coniferous forest, meadows and seeps, vernal pools at 600-2000m elevation. Riverside and San Diego Cos.	Apr-Jun	Fed: None Calif: END, S2 CRPR: 1B.2 USFS: S BLM: S MSHCP: AC	Absent; no suitable habitat, below elevation range, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Microseris douglasii ssp. platycarpha Small-flowered microseris	Annual herb. Clay soils in cismontane woodland, coastal scrub, valley and foothill grassland, vernal pools at 15-1070m elevation. LA, Orange, Riverside, San Diego Cos., Channel Islands, Baja. Not tracked in CNDDB.	Mar-May	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low; potentially suitable habitat, eight mapped CCH records within 5 mi. (2000, 1.5 mi. N, 1996, 2.7 mi. WSW; 1992-2015, all about 2.5 mi. SE), not observed during surveys.
Monardella hypoleuca ssp. intermedia Intermediate monardella	Perennial rhizomatous herb. Chaparral, cismontane woodlands, sometimes lower montane coniferous forest at 400-1250m elevation. Orange, Riverside, San Diego Co.	Apr-Sep	Fed: None Calif: S2? CRPR: 1B.3	Not expected; potentially marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Myosurus minimus ssp. apus Little mousetail	Annual herb. Valley and foothill grasslands, alkaline vernal pools at 20-640m elevation. Riverside, San Bernardino, San Diego Cos., Central and Northern CA, Oregon, Baja.	Mar-Jun	Fed: None Calif: S2 CRPR: 3.1 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Nama stenocarpa Mud nama	Annual/perennial herb. Found in marshy habitat on lake margins and riverbanks at 5-500m elevation. S CA, San Clemente Island, central CA, AZ, TX, Baja, Sonora.	Mar-Oct	Fed: None Calif: S1S2 CRPR: 2B.2 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Navarretia fossalis Spreading navarretia	Annual herb. Chenopod scrub, shallow freshwater marshes and swamps, playas, vernal pools at 30-655m elevation. LA, Riverside, San Diego, San Luis Obispo Cos., Baja.	Apr-Jun	Fed: THR Calif: S2 CRPR: 1B.1 MSHCP: AC b	Absent; no suitable habitat six documented occurrences within 5 mi. (1922, exact location unknown, mapped 1.0 mi. SE; 2001-2017, closest is 1.6 mi. N, appears to have been developed), not observed during surveys.
Navarretia prostrata Prostrate vernal pool navarretia	Annual herb. Mesic areas in coastal scrub, valley and foothill grassland (alkaline), meadows and seeps, vernal pools at 3-1210m elevation. Locations in northern, central, and southern CA.	Apr-Jun	Fed: None Calif: S2 CRPR: 1B.2 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Orcuttia californica California Orcutt grass	Annual grass. Vernal pools at 15-660m elevation. LA, Orange, Riverside, San Diego, Ventura Co., Baja.	Apr-Aug	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC b	Absent; no suitable habitat, three documented occurrences within 5 mi. (1941, exact location unknown, mapped 1.2 mi. NNE, possibly extirpated; 2001, 1.8 mi. ESE; 2015, 1.8 mi. E), not observed during surveys.
Polygala cornuta var. fishiae Fish's milkwort	Perennial deciduous shrub. Chaparral, cismontane woodland, riparian woodlands at 100-1000m elevation. LA, Orange, Riverside, Santa Barbara, San Diego, and Ventura Co., Baja. Not tracked in CNDDB.	May-Aug	Fed: None Calif: S4 CRPR: 4.3 MSHCP: AC	Absent; potentially marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Pseudognaphalium leucocephalum White rabbit-tobacco	Perennial herb. Sandy or gravelly soils in chaparral, cismontane woodland, coastal scrub, riparian woodland at 0-2100m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos., AZ, NM, TX, Baja and Sonora Mex.	(Jul)Aug-Nov(Dec)	Fed: None Calif: S2 CRPR: 2B.2	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Quercus engelmannii Engelmann oak	Perennial deciduous tree. Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland at 50-1300m elevation. Mostly in foothills of Orange, west Riverside, San Bernardino, and San Diego Counties, also southeast San Gabriel Mountain foothills (LA County). Not tracked in the CNDDB.	Mar-Jun	Fed: None Calif: S3 CRPR: 4.2	Absent; potentially suitable habitat, conspicuous plant not observed during surveys.
Romneya coulteri Coulter's matilija poppy	Large perennial rhizomatous herb. Often in burn areas in chaparral, coastal scrub at 20-1200m elevation. LA, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo Cos. Not tracked in CNDDB.	Mar-Jul(Aug)	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Absent; no or marginal habitat, conspicuous plant not observed during surveys.
Scutellaria bolanderi ssp. austromontana Southern mountains skullcap	Perennial rhizomatous herb. Mesic areas in chaparral, cismontane woodland, lower montane coniferous forest at 425-2000m elevation. Often in meadows and along streams. LA, Riverside, San Bernardino, San Diego Cos. Presumed extirpated in LA and San Bernardino Cos.	Jun-Aug	Fed: None Calif: S3 CRPR: 1B.2 USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Sibaropsis hammittii Hammitt's clay-cress	Annual herb. Clay soils in chaparral openings, valley and foothill grassland at 720-1065m elevation. Riverside and San Diego Co.	Mar-Apr	Fed: None Calif: S2 CRPR: 1B.2 USFS: S MSHCP: AC b	Absent; no or marginal habitat, no documented occurrences within 5 mi., below elevation range, not observed during surveys.
Sidalcea neomexicana Salt spring checkerbloom	Perennial herb. Alkaline, mesic soils in chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, playas at 15-1530m elevation. Kern, LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos., western US, Sonora Mex. Presumed extirpated in LA Co.	Mar-Jun	Fed: None Calif: S2 CRPR: 2B.2 USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Sphaerocarpos drewiae Bottle liverwort	Ephemeral liverwort. Grows on soil in openings in chaparral and coastal scrub at 90-600m elevation. Riverside and San Diego Cos.	Not applicable	Fed: None Calif: S1 CRPR: 1B.1	Not expected; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Symphyotrichum defoliatum San Bernardino aster	Perennial rhizomatous herb. Near ditches, streams, springs in cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, valley and foothill grasslands (vernally mesic) at 2-2040m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Imperial, Kern, Santa Barbara, San Luis Obispo Cos.	Jul-Nov	Fed: None Calif: S2 CRPR: 1B.2 USFS: S BLM: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Texosporium sancti-jacobi Woven-spored lichen	Crustose lichen. Grows on soil, small mammal pellets, dead twigs, and *Selaginella* species, in chaparral openings at 60-660m elevation. LA, Riverside, San Diego, Ventura, Santa Barbara, San Benito Cos., San Clemente Island, ID, OR, WA.	Not applicable	Fed: None Calif: S2 CRPR: 3	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Tortula californica California screw-moss	Moss. Sandy soil in chenopod scrub, valley and foothill grassland at 10-1460m elevation. LA, Riverside, San Diego, Ventura Cos., Central and Northern CA, Channel Islands.	Not applicable	Fed: None Calif: S2? CRPR: 1B.2 BLM: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Trichocoronis wrightii var wrightii Wright's trichocoronis	Annual herb. Alkaline soils in meadows and seeps, marshes and swamps, riparian forest, vernal pools at 5-435m elevation. Riverside Co., Central Valley, TX, Baja.	May-Sep	Fed: None Calif: S1 CRPR: 2B.1 MSHCP: AC b	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Viguiera laciniata San Diego County viguiera	Perennial shrub. Chaparral, coastal scrub at 60-750m elevation. Riverside, Orange, San Diego Cos (occurrences outside of San Diego Co are introduced), Baja and Sonora, Mexico. Not tracked in CNDDB.	Feb-Jun(Aug)	Fed: None Calif: S4 CRPR: 4.3	Absent; potentially suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Invertebrates			
Bombus crotchii Crotch bumble bee	Coastal CA E to Sierra-Cascade crest & S into Mexico. Open grassland and scrub habitats. Food plant genera include *Antirrhinum, Asclepias, Chaenactis, Lupinus, Medicago, Salvia, Phacelia, Clarkia, Dendromecon, Eschscholzia,* and *Eriogonum*. Lives in colonies that may be underground in rodent holes or above ground in rock piles, tree cavities, etc.	Fed: None Calif: SA[3], S1S2	Low to moderate; potentially suitable habitat, food plants present, two documented occurrences within 5 mi. (2001, 1.5 mi. WNW; 1975, exact location unknown, mapped 3.5 mi. NW), no bee colonies incidentally observed during surveys.
Branchinecta lynchi Vernal pool fairy shrimp	Vernal pools or similar vernal habitats, requires cool water pools (≤50ºF to hatch, ≤75ºF to survive); disjunct locations in Riverside Co. and the Coast Ranges thru Central Valley to Tehama Co., southern Oregon, up to elevation of 1159m.	Fed: THR Calif: SA, S3 MSHCP: AC a	Absent; no suitable habitat, no documented occurrences within 5 mi.
Branchinecta sandiegonensis San Diego fairy shrimp	Vernal pool complexes; endemic to San Diego and Orange County mesas. One occurrence in Murrieta is a transplant to a mitigation pool outside of native range.	Fed: END Calif: SA, S2	Absent; no suitable habitat, one documented occurrence within 5 mi. (2017, Clayton Ranch Mitigation Site; transplant outside of native range).
Cincindela senilis frosti Senile tiger beetle	Coastal salt marshes, tidal mud flats, interior alkali mud flats. CA and northern Mexico, San Diego Co. to Sonoma and Lake Co.	Fed: None Calif: SA, S1	Absent; no suitable habitat, no documented occurrences within 5 mi.
Danaus plexippus pop. 1 Monarch butterfly	California overwintering population.	Fed: CAN State: SA, S2S3 USFS: S (Los Padres NF)	Absent; individual butterflies may be present, but too far inland for overwintering.

[3] Crotch bumble bee was previously a candidate for state listing, but the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act: *Almond Alliance of California v. California Department of Fish and Wildlife*, Sacramento Superior Court No. 34-2019-80003216 (Nov. 13, 2020). The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Euphydryas editha quino Quino checkerspot butterfly	Coastal scrub, open chaparral, juniper woodland, native grassland. Western Riverside Co., southern San Diego Co., Baja. Flight season from mid-Jan to late May. Host plants are dwarf plantain (*Plantago erecta*), purple owl's clover (*Castilleja exserta*), white snapdragon (*Antirrhinum coulterianum*), wooly plantain (*Plantago patagonica*), thread-leaved bird's beak (*Cordylanthus rigidus*). USFWS considers species extirpated in San Bernardino Co.	Fed: END Calif: SA, S1S2 MSHCP: AC	Low; potentially marginal habitat, one host plant species present (*Plantago erecta*), 11 documented occurrences within 5 mi. (1997-2003, closest is 2.6 mi. SE), not observed during focused surveys in 2004 and not incidentally observed during later surveys.
Linderiella occidentalis California linderiella	Vernal pools, seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and total dissolved solids. N and Central CA, Riverside (Santa Rosa Plateau) and Ventura Cos.	Fed: None Calif: SA, S2S3	Absent; no suitable habitat, outside known geographic range.
Linderiella santarosae Santa Rosa Plateau fairy shrimp	Found only in the basalt vernal pools on Santa Rosa Plateau in Riverside County.	Fed: None Calif: SA, S1 MSHCP: AC a	Absent; no suitable habitat, outside known geographic range.
Neolarra alba White cuckoo bee	Cleptoparasitic in the nests of perdita bees. Known only from localities in Southern California. All occurrences are historical.	Fed: None Calif: SA, SH	Not expected; no documented occurrences within 5 mi., all occurrences are historical.
Socalchemmis icenoglei Icenogle's socalchemmis spider	Coastal scrub; known only from the type locality in the vicinity of Winchester, Riverside Co.	Fed: None Calif: SA, S1	Not expected; no documented occurrences within 5 mi.
Streptocephalus woottoni Riverside fairy shrimp	Endemic to Western Riverside, Orange, and San Diego counties in areas of tectonic swales/earth slump basins in grassland and coastal sage scrub. Coastal scrub, valley & foothill grassland, vernal pool, wetland. Inhabit seasonally astatic pools filled by winter/spring rains. Hatch in warm water later in the season. Generally restricted to pools greater than 12 inches deep. All known populations lie between 30 and 415 meters elevation.	Fed: END Calif: SA, S1S2 MSHCP: AC a	Absent; no suitable habitat, 8 documented occurrences within 5 mi. (2002-2017, closest extant is 1.8 mi. ESE).
Fish			
Gila orcuttii Arroyo chub	Slow-moving or backwater sections of warm/ cool streams with mud or sand substrates. LA, San Gabriel, San Luis Rey, Santa Ana & Santa Margarita Riv & Malibu & San Juan creeks.	Fed: None Calif: SSC, S2 MSHCP: AC USFS: S	Absent; no perennial aquatic habitat.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Amphibians			
Anaxyrus californicus Arroyo toad	Washes & intermittent streams of semi-arid regions, sandy-banked rivers, riparian woodlands, & loose gravel. Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range, below 4600 ft. Southern California to tip of Baja California. Desert pop. along Mojave River.	Fed: END Calif: SSC, S2S3 MSHCP: AC c	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Rana draytonii California red-legged frog	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	Fed: THR Calif: SSC, S2S3 MSHCP: AC c	Absent; no perennial aquatic habitat.
Spea hammondii Western spadefoot toad	Cismontane woodland, coastal scrub, valley & foothill grassland, vernal pool. Breeds in quiet streams & vernal pools, burrows beneath sand during dry season. W CA, Central Valley to Baja California. From near sea level up to 4,500 ft elev.	Fed: None Calif: SSC, S3 BLM: S MSHCP: AC	Absent; no suitable habitat, 17 documented occurrences within 5 mi. (1998-2019, closest is 1.1 mi. NE), not observed during surveys.
Taricha torosa Coast Range newt	Valley-foothill hardwood and hardwood-conifer, coastal scrub, chaparral, grassland, mixed conifer. Coast Ranges from N San Diego Co. to central Mendocino Co., southern Sierra Nevada foothills S of Kaweah River. Spends most of the year in subterranean refuges, migrates to aquatic breeding areas in the fall and returns in the spring.	Fed: None Calif: SSC, S4 MSHCP: AC	Absent; no suitable aquatic breeding habitat on or adjacent to the site, no documented occurrences within 5 mi., not observed during surveys but is secretive.
Reptiles			
Anniella stebbinsi (Anniella pulchra pulchra) Southern California legless lizard	Various habitats, mainly shrublands, <6500 ft. elev. Coast Ranges from Bay area to N Baja CA, SW Sierra Nevada, parts of the Central Valley, Transverse & Peninsular Ranges.	Fed: None Calif: SSC, S3 USFS: S	Low to moderate; potentially suitable habitat, one documented occurrence within 5 mi. (2011, 3.9 mi. SW), not observed during surveys but is secretive.
Arizona elegans occidentalis California glossy snake	Arid scrub, rocky washes, grasslands, chaparral, often with loose or sandy soils. Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular Ranges, south to Baja California. Sea level to 7200' elev. Nocturnal.	Fed: None Calif: SSC, S2	Low; potentially marginal habitat, three documented occurrences within 5 mi. (1977, exact location unknown, mapped 3.4 mi. NW; 1946, exact location unknown, mapped 4.7 mi. SW; 1946, exact location unknown, mapped 4.2 mi. W), not observed during surveys but is nocturnal.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Aspidoscelis hyperythra Orange-throated whiptail	Low-elevation coastal scrub, chaparral, valley-foothill hardwood, sea level to 1040m. Sandy areas, patches of rock. S CA, west of desert to tip of Baja CA.	Fed: None Calif: WL, S2S3 USFS: S MSHCP: AC	Occurs; observed on the site during surveys.
Aspidoscelis tigris stejnegeri Coastal whiptail	Primarily hot, dry open areas with sparse foliage, chaparral, woodland, riparian; coastal So CA, mostly west of Peninsular Ranges and south of Transverse Ranges, north into Ventura County, below ±7000' elev. and into Baja.	Fed: None Calif: SSC, S3 MSHCP: AC	Occurs; observed on the site during surveys.
Coleonyx variegatus abbotti San Diego banded gecko	Rock outcrops in shrublands, to 5000' elevation; southwest Calif. through much of n. Baja Calif.	Fed: None Calif: SSC, S1S2 MSHCP: AC	Low; potentially marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Crotalus ruber Red-diamond rattlesnake	Desert scrub, thorn scrub, chaparral below 4,000ft. San Bernardino County S through most of Baja California, Mexico.	Fed: None Calif: SSC, S3 USFS: S MSHCP: AC	Low; no or marginal habitat, two documented occurrences within 5 mi. (2001, 2.5 mi. WSW; 2001, 1.5 mi. NW), not observed during surveys.
Diadophis punctatus modestus San Bernardino ringneck snake	Open relatively rocky areas within valley-foothill locales, mixed chaparral/annual grasslands. Prefers moist habitats. W San Diego & Riv. Cos., SW San Bern., Vent. & LA Cos., NW Baja CA.	Fed: None Calif: SA, S2? USFS: S	Low; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Emys marmorata Western pond turtle	Perennial ponds, streams, marshes, irrigation ditches. Coastal S & cent. CA, NW Baja CA, below about 4800 ft. elev. (few higher elev. pops.)	Fed: None Calif: SSC, S3 BLM: S USFS: S MSHCP: AC	Absent; no perennial aquatic habitat.
Phrynosoma blainvillii Coast horned lizard	Coastal sage scrub, low elevation chaparral, annual grassland, riparian scrub and woodlands, desert wash, pinyon and juniper woodland, valley and foothill grassland, 0-2438m elevation. SW California to NW Baja California, Mexico.	Fed: None Calif: SSC, S3S4 BLM: S MSHCP: AC	Occurs; observed on the site during surveys.
Salvadora hexalepis virgultea Coast patch-nosed snake	Shrublands, washes, sandy flats, rocky areas; Santa Barbara County through southwest Calif., to northwest Baja Calif. Diurnal.	Fed: None Calif: SSC, S2S3	Low; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Thamnophis hammondii Two-striped gartersnake	Usually in or near perennial fresh water & adjacent riparian habitat, pools in streams. SW CA & NW Baja California. Usually in or near perennial fresh water & adjacent riparian habitat, pools in streams. SW CA & NW Baja California. Primarily aquatic. Diurnal. Also active at night and at dusk during hot weather in some areas. Can be active most of the year depending on weather conditions. Has been found from January to November.	Fed: None Calif: SSC, S3S4 BLM: S USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Birds			
Accipiter cooperii Cooper's hawk	Cismontane woodland, riparian forest, riparian woodland, upper montane coniferous forest. Forages in open areas over scrublands; California, Mexico, Central America. Nests in trees, often in dense woods. Year-round resident in most of southern California range. CNDDB only tracks nesting.	Fed: None Calif: WL, S4 MSHCP: AC	Occurs (foraging), low (nesting); observed on the site during surveys, no or marginal nesting habitat, no documented occurrences (nesting) within 5 mi.
Aechmophorus clarkii Clark's grebe	Requires large, open waters for courtship, feeding, and flocking, and extensive beds of tall, emergent vegetation such as tules or cattails for nesting; generally nests in colonies. Not tracked in CNDDB.	Fed: BCC Calif: None	Absent (foraging and nesting); no suitable habitat, may be seen in migration or moving between large lakes in the region, not observed during surveys.
Agelaius tricolor Tricolored blackbird	Breeds colonially in freshwater marshes, nomadic among marshes and fields in winter; almost completely endemic to Calif. Year-round resident in southern California range. CNDDB only tracks nesting.	Fed: BCC Calif: THR, SSC, S1S2 BLM: S MSHCP: AC	Low to moderate (foraging), absent (nesting); potentially suitable wintering habitat, no suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (2008, 4.9 mi. SE), several eBird records in vicinity, not observed during surveys.
Aimophila ruficeps canescens Southern California rufous-crowned sparrow	Sparse, mixed chaparral, scrub, rocky, brushy slopes. Central California to Baja California. Year-round resident in southern California range.	Fed: None Calif: WL, S3 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Aquila chrysaetos Golden eagle	Found in a variety of habitats from sea level to 11,500 feet, rugged open habitats preferred. Large platform nests constructed on secluded cliffs, large trees, and occasionally structures (i.e., electrical transmission towers). CNDDB tracks nesting and wintering.	Fed: BGEPA, BCC Calif: FP, WL, S3 BLM: S MSHCP: AC	Not expected (foraging), absent (nesting); potentially marginal foraging habitat, no suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (1974, 2.5 mi. N), multiple eBird records in vicinity (may be seen soaring overhead), not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Ardea alba Great egret	Brackish and freshwater marshes, estuary, riparian forest, wetland. Colonial nester in large trees. Rookery sites located near marshes, tide-flats, irrigated pastures, and margins of rivers and lakes. CNDDB only tracks nesting colonies.	Fed: none Calif: SA, S4	Occurs (foraging or fly over), absent (nesting); observed onsite during surveys, no nesting habitat or nesting colonies present.
Ardea herodias Great blue heron	Brackish and freshwater marshes, estuary, riparian forest, wetland. Colonial nester in tall trees, cliffsides, and sequestered spots on marshes. Rookery sites in close proximity to foraging areas: marshes, lake margins, tide-flats, rivers and streams, wet meadows. CNDDB only tracks nesting colonies.	Fed: none Calif: SA, S4 MSHCP: AC	Occurs (fly over), not expected (foraging), absent (nesting); no or marginal foraging habitat, no suitable nesting habitat, no documented occurrences (nesting) within 5 mi., multiple eBird records in vicinity.
Artemisiospiza belli Bell's sage sparrow	Sage scrub and chaparral communities. Nests mainly in shrubs, also in grass, and occasionally on ground under shrub. Found in coastal sage scrub in south of range. Central Washington southward to Baja California, Mexico. Year-round resident in southern CA.	Fed: BCC Calif: WL, S3 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Asio otus Long-eared owl	Conifer, oak, riparian, pinyon-juniper, and desert woodlands that are open or adjacent to grasslands, meadows, or shrublands. Most of CA *except* Central Valley, coastal LA and Orange Co., western Imperial Co., and central Riverside Co. Very limited breeding range in southern CA. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3?	Not expected (foraging and nesting); no or marginal habitat, no documented occurrences (nesting) within 5 mi., no eBird records in vicinity, not observed during surveys.
Athene cunicularia Burrowing owl	Nests in rodent burrows, usually in grasslands. Forages in open habitat; increasingly uncomm. in S CA. Occurs through W US/Mex. Sparse in desert scrub but common around irrigated lands. CNDDB tracks burrow sites and some wintering sites.	Fed: BCC Calif: SSC, S3 BLM: S MSHCP: AC c	Occurs; observed on site during focused surveys in 2018. Not observed during focused surveys in 2019 and 2021.
Buteo regalis Ferruginous hawk	Open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and juniper habitats. Great Basin grassland and scrub, pinyon and juniper woodlands, valley and foothill grassland. Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles. Does not breed in southern CA.	Fed: BCC Calif: WL, S3S4 MSHCP: AC	Low (foraging), absent (nesting); potentially suitable habitat foraging habitat (when fields are fallow), outside of breeding range, three documented occurrences within 5 mi. (2008, 4.1 mi. NE; 2007, 3.9 mi ENE; 2008, 2.4 mi. E), a few eBird records in vicinity, not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Buteo swainsoni Swainson's hawk	Grassland/agricultural, large trees for nesting, desert scrub with Joshua tree & Fremont cottonwood overstory, near streams & open fields. Breeds overwhelmingly in Great Basin & Central Valley of California. Seen in migration in southern California. CNDDB only tracks nesting.	Fed: BCC Calif: THR, S3 BLM: S MSHCP: AC	Low (foraging), absent (nesting), may be seen in migration; potentially marginal foraging habitat, outside current breeding range, a few eBird records in vicinity, not observed during surveys.
Calypte costae Costa's hummingbird	Desert and coastal scrub and chaparral in desert, semi-desert and mountain foothills and seasonally in mountains, adjacent open meadows and gardens. Found in NV, UT, AZ, CA and Mexico. Year-round resident in southern CA. CNDDB only tracks nesting.	Fed: BCC Calif: SA, S4	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Campylorhynchus brunneicapillus sandiegensis Coastal cactus wren	Desert scrub and coastal sage scrub with cactus patches; Southern CA and northwestern Baja. Non-migratory. Pairs defend territories throughout the year. Limited to San Diego and Orange Cos.	Fed: BCC Calif: SSC, S3 USFS: S MSHCP: AC	Absent (foraging and nesting); no suitable habitat, outside current range, not observed during surveys.
Chamaea fasciata Wrentit	Chaparral, oak woodland, shrublands, western CA, northwestern Baja, western Oregon. Year-round resident in southern CA range. CNDDB does not track this species.	Fed: BCC Calif: None	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Charadrius nivosus Western snowy plover	Coastal beaches, sand spits, salt pans, river bars. Coastal areas from Washington State south to Baja. Federal listing applies only to the Pacific coastal population. CNDDB only tracks nesting. Year-round resident in southern CA range except for eastern deserts where it is seen in migration.	Fed: THR, BCC Calif: SSC, S2	Absent (foraging and nesting); no suitable habitat, no documented occurrences (nesting) within 5 mi., no eBird records in vicinity, not observed during surveys.
Circus hudsonius (C. cyaneus) Northern harrier	Open habitats with hunting perches, marshes, meadows, grasslands, pastures, croplands, lake and river edges. Nests on the ground. Breeds widely but locally in North America, various portions of CA including Central Valley, central and northern coast, northeastern CA, and southern coastal CA. Does not breed in most of southern CA range. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3 MSHCP: AC	Occurs (foraging), low to moderate (nesting); observed on the site during surveys, potentially suitable nesting habitat, no documented occurrences (nesting) within 5 mi.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Dryobates (Picoides) nuttallii Nuttall's woodpecker	Found in low elevation riparian and oak woodlands, rarely in conifers. Central Valley, Transverse and Peninsular Ranges, Coast Ranges north to Sonoma Co., lower portions of the Cascade Range and Sierra Nevada. Year-round resident throughout coastal mountains of CA. Not tracked in CNDDB.	Fed: BCC Calif: None	Occurs (foraging), moderate (nesting); observed on the site during surveys, potentially marginal nesting habitat.
Elanus leucurus White-tailed kite	Breeds in woodlands and riparian forests, forages over open terrain; Pacific Coast (Calif, northern Baja, Oregon), other scattered localities. Year-round resident in southern CA range. CNDDB only tracks nesting.	Fed: None Calif: FP, S3S4 BLM: S MSHCP: AC	Occurs (foraging), low (nesting); observed on the site during surveys, no or marginal nesting habitat, no documented occurrences (nesting) within 5 mi., five nests within 10 mi. of the site (see Section 3.4.1).
Empidonax traillii extimus Southwestern willow flycatcher	Dense riparian forests, wet mountain meadow systems with standing water for at least part of the breeding season (May to July) & with ample numbers of willow & other associated trees & shrubs. Rare & local in S CA. SW US & N Baja California. CNDDB only tracks nesting.	Fed: END Calif: END, S1 MSHCP: AC a	Absent (foraging and nesting); no suitable habitat, no documented occurrences within 5 mi., not observed during surveys. Habitat assessment found no suitable habitat on the site.
Eremophila alpestris actia California horned lark	Variety of open habitats with low growing vegetation or bare ground, grasslands, rangelands, "bald" hills, mtn. meadows, open coastal plains, fallow fields, alkali flats. Within coastal Sonoma Co. to San Diego Co., San Joaquin Valley & E to foothills.	Fed: None Calif: WL, S4 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Haliaeetus leucocephalus Bald eagle	Breed in large trees, usually near major rivers or lakes. Winters more widely. Wide but scattered distribution in N America, esp. coastal regions. CNDDB tracks nesting and wintering.	Fed: Delisted, BGEPA, BCC Calif: END, FP, S3 MSHCP: AC BLM: S USFS: S	Absent (foraging and nesting); no suitable habitat, not observed during surveys.
Icteria virens Yellow-breasted chat	Summer resident, inhabits riparian thickets of willow near watercourses, low dense riparian willow. Migrant and summer resident in CA, northern CA, central coast, eastern Central Valley, coastal southern CA, Colorado River, western US, Canada, Mexico, Central America. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3 MSHCP: AC	Not expected (foraging and nesting); no or marginal habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Lanius ludovicianus Loggerhead shrike	Open areas where small trees, shrubs, and fences can provide suitable perches. Nests in small trees and large shrubs. Throughout much of North America. CNDDB only tracks nesting.	Fed: BCC Calif: SSC, S4 MSHCP: AC	Occurs (foraging), moderate (nesting); observed on the site during surveys, potentially suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (2007, 4.5 mi. NE).
Plegadis chihi White-faced ibis	Freshwater wetlands, shallow lakes, wet meadows, flooded pastures and croplands. Nests in dense, fresh emergent wetland. Salton Sea, local winter visitor along coast, uncommon elsewhere in southern CA and Central Valley. CNDDB only tracks nesting colonies.	Fed: None Calif: WL, S3S4 MSHCP: AC	Not expected (foraging), absent (nesting); no suitable habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.
Polioptila californica Coastal California gnatcatcher	Sage scrub, also chaparral, grasslands, riparian adjacent to or mixed with sage scrub below 2,500 ft elevation. S Ventura Co. to LA, Orange, Riv., San Bern., San D. Cos into Baja CA, Mexico.	Fed: THR Calif: SSC, S2 MSHCP: AC	Occurs (foraging and nesting); observed on the site during surveys including nest sites and breeding pairs.
Selasphorus rufus Rufous hummingbird	Breeds in open or shrubby areas, forest openings, yards and parks. Sometimes forests, thickets, swamps, meadows. Elev. range 0-6000 ft. Migrating birds can be up to 12,600 ft. Wintering birds in oak, pine, and juniper woodlands. Found in Western US and Canada. Generally migrates through southern CA during pre-breeding migratory season (mid-Feb to mid-May). CNDDB only tracks nesting.	Fed: BCC Calif: SA, S1S2	Occurs (foraging), not expected (nesting); observed onsite during surveys, outside breeding range, no documented occurrences (nesting) within 5 mi.
Setophaga petechia Yellow warbler	Migrant and summer resident in southern CA. Riparian, including willow, cottonwood, sycamore, alder, aspen for nesting & foraging, also conifer forest. CNDDB only tracks nesting.	Fed: BCC Calif: SSC, S3S4	Low (foraging and nesting); potentially marginal habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.
Spinus lawrencei Lawrence's goldfinch	Summer breeder, may overwinter. Coastal side of southern and central CA, western edge of southern deserts, east side of Central Valley into northern CA, Colorado River, SW US and northern Mex. Valley foothill hardwood and hardwood-conifer, desert riparian, pinyon juniper, palm oasis, lower montane. Nests in oaks, conifers. CNDDB only tracks nesting.	Fed: BCC Calif: SA, S4	Occurs (foraging), low (nesting); observed on the site during surveys, potentially suitable or marginal nesting habitat, no documented occurrences (nesting) within 5 mi.
Toxostoma redivivum California thrasher	Chaparral. Coastal and foothill areas of California and NW Baja California, Mexico. Resident throughout its range. Not tracked in CNDDB.	Fed: BCC Calif: none	Occurs (foraging), moderate (nesting); potentially suitable or marginal nesting habitat.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Vireo bellii pusillus Least Bell's vireo	Riparian woodlands, bottomlands. N Mex. & Baja CA into S CA & the S mid-western US. CNDDB only tracks nesting.	Fed: END Calif: END, S2 MSHCP: AC a	Absent (foraging and nesting); no suitable habitat, two documented occurrences within 5 mi. (both along San Jacinto River - 2010, 4.6 mi. ENE; 2002, 4.2 mi. ENE), not observed during surveys. Habitat assessment found no suitable habitat on the site.
Xanthocephalus xanthocephalus Yellow-headed blackbird	Marsh, swamp, wetland. Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds. Nests only where large insects are abundant. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3	Absent (foraging and nesting); no suitable habitat, few eBird records in vicinity, not observed during surveys.
Mammals			
Chaetodipus californicus femoralis Dulzura pocket mouse	Variety of habitats including coastal scrub, chaparral & grassland. Attracted to grass-chaparral edges. Chaparral, coastal scrub, valley and foothill grassland.	Fed: None Calif: SSC, S3	Low to moderate; potentially suitable or marginal habitat, no documented occurrences within 5 mi.
Chaetodipus (Perognathus) fallax Northwestern San Diego pocket mouse	Sandy herbaceous areas, usually in association with rocks or coarse gravel, chaparral, coastal scrub, grasslands. SW CA & NW Baja California (inland to San Bernardino Valley).	Fed: None Calif: SSC, S3S4 MSHCP: AC	Low to moderate; potentially marginal habitat, two documented occurrences within 5 mi. (1992, 3.4 mi. NE; 2009, 3.8 mi. S).
Dipodomys merriami parvus San Bernardino kangaroo rat	Alluvial floodplains and adjacent upland habitats within the San Bernardino, Menifee, and San Jacinto valleys, Riversidean alluvial fan sage scrub.	Fed: END Calif: CanE, SSC, S1 MSHCP: AC c	Absent; no suitable habitat, one documented occurrence within 5 mi. (1938, exact location unknown, mapped 4.4 mi. NNE).
Dipodomys stephensi Stephens' kangaroo rat	Sparse, gently sloping grassland, sometimes at margins of cultivated or disturbed lands; prefers grassland dominated by forbs rather than annual grasses, prefers sparse perennial vegetation; firm soil for burrowing (not too hard or too sandy); may use abandoned gopher burrows; W Riverside Co. and adjacent San Diego Co. San Bernardino County occurrences extirpated. No critical habitat has been designated.	Fed: END Calif: THR, S2 MSHCP: AC	High; potentially suitable habitat, 22 documented occurrences within 5 mi. (1938-2005, closest is 1.2 mi. N).

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Eumops perotis californicus Western mastiff bat	Lowlands (with rare exceptions), many open, semi-arid to arid habitats, conifer and deciduous woodlands, coastal scrub, grasslands, chaparral. Central & S CA, S AZ, NM, SW TX. Roosts in deep rock crevices, high buildings, trees, and tunnels; forages over wide area.	Fed: None Calif: SSC, S3S4 BLM: S	Low to moderate (foraging), low (roosting); potentially suitable foraging habitat, no or marginal roosting habitat, two documented occurrences within 5 mi. (1990, exact location unknown, mapped 2.6 mi. N; 2001, 1.5 mi. NW).
Lasiurus xanthinus Western yellow bat	Valley foothill riparian, desert riparian, desert wash, palm oasis. Roosts in trees, particularly palms. Forages over water and among trees. Desert regions of the SW US. Distributed in S CA, AZ, NM, & TX, into Mexico.	Fed: None Calif: SSC, S3	Not expected (foraging and roosting); no or marginal habitat, one documented occurrence within 5 mi. (1982, exact location unknown, mapped 2.7 mi. N).
Lepus californicus bennettii San Diego black-tailed jackrabbit	Chaparral, coastal, or Riversidean sage scrub with adjacent open grassland. Los Angeles Co. S to San Quintin, Baja California, Mexico.	Fed: None Calif: SSC, S3S4 MSHCP: AC	Occurs; observed on the site during surveys.
Neotoma lepida intermedia San Diego desert woodrat	Arid shrublands, rocky outcrops, & crevices. Cismontane CA., San Luis Obispo to San Diego Co. & NW Baja California. 0-7000 ft. elev. Variety of shrub and desert habitats, primarily associated with rock outcroppings, boulders, cacti, or areas of dense undergrowth. Constructs elaborate middens of sticks and other materials.	Fed: None Calif: SSC, S3S4 MSHCP: AC	Not expected; potentially marginal habitat, no documented occurrences within 5 mi., no middens observed during surveys.
Nyctinomops femorosaccus Pocketed free-tailed bat	Deserts & arid lowlands, pinyon juniper woodlands, desert scrub, riparian scrub, Joshua tree woodland, rocky areas with high cliffs. E Riverside & San Diego Cos. and Imperial Co., through SW US, Baja California, mainland Mexico. Roost mainly in crevices of high cliffs. Few records in So CA. Prefers rocky desert areas with high cliffs or rock outcrops. Feeds over ponds, streams, and arid desert.	Fed: None Calif: SSC, S3	Not expected (foraging and roosting); no suitable habitat, no documented occurrences within 5 mi.
Onychomys torridus ramona Southern grasshopper mouse	Nocturnal, active year-round. Desert scrub, coastal scrub, mixed chaparral, sagebrush, especially scrub habitats with friable soil, prefers low to moderate shrub cover. LA through San Diego counties and northwest Baja.	Fed: None Calif: SSC, S3	Low; potentially marginal habitat, one documented occurrence within 5 mi. (1932, exact location unknown, mapped 4.4 mi. NE).

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Perognathus longimembris brevinasus Los Angeles pocket mouse	Nocturnal, active Apr-Aug. Annual grassland, sage scrub, alluvial sage scrub. S California from Rancho Cucamonga (W boundary), San Gorgonio (E), Aguanga & Oak Grove, San Diego (S). Open ground with fine, sandy soils.	Fed: None Calif: SSC, S1S2 MSHCP: AC c	Low; potentially marginal habitat, no documented occurrences within 5 mi.
Perognathus longimembris internationalis Jacumba pocket mouse	Desert riparian, desert scrub, desert wash, coastal scrub and sagebrush. Rarely found on rocky sites.	Fed: None Calif: SSC, S2	Low; potentially marginal habitat, no documented occurrences within 5 mi.
Taxidea taxus American badger	Mountains, deserts, interior valleys where burrowing animals are available as prey & soil permits digging. Throughout Central & W North America.	Fed: None Calif: SSC, S3	Low; potentially suitable habitat, no badger burrows or diggings observed during surveys.

References: CDFW (2021b, 2021c), USFWS (2021), Dudek (2003), RCA (2020); Cornell (2021); eBird (2021); USFS (2013).

"Documented occurrences" refers to species occurrences in the California Natural Diversity Database (CNDDB) unless otherwise noted. For plant species that are not tracked in the CNDDB, records from the Consortium of California Herbaria (CCH) may be used (only CCH records that include map coordinates are utilized). EBird (eBird.org) is an online database of bird distribution and abundance sponsored by the Cornell Laboratory of Ornithology and compiled from observations submitted by citizen scientists. eBird records of bird observations are noted but should be interpreted with caution. eBird records "in vicinity" means records within about a 5-mile radius of the site.

Federal designations: (Federal Endangered Species Act, U.S. Fish and Wildlife Service):

- END: Federally listed, endangered; an animal or plant in danger of extinction within the foreseeable future throughout all or a significant portion of its range.
- THR: Federally listed, threatened; an animal or plant which is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range.
- Cand Candidate for federal listing as threatened or endangered; species that has been studied by the U.S. Fish and Wildlife Service, and the Service has concluded that it should be proposed for addition to the Federal Endangered and Threatened species list.
- Prop Proposed for federal listing as Endangered or Threatened under Section 4 of the Endangered Species Act.
- Delisted: Previously federally listed as endangered or threatened, but is no longer listed (e.g., due to recovery).
- None: The species has no federal conservation status.
- BGEPA: Federal Bald and Golden Eagle Protection Act; protects bald and golden eagles.
- BCC: USFWS Bird of Conservation Concern; migratory and non-migratory bird species (beyond those already designated as Federally threatened or endangered) that represent USFWS highest conservation priorities.

State designations: (California Endangered Species Act, California Dept. of Fish and Wildlife)

- END: State listed, endangered; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.

CanE: Candidate Endangered; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Fish and Game Commission has formally noticed as being under review by the Department of Fish and Wildlife for addition to the list of endangered species, or a species for which the commission has published a notice of proposed regulation to add the species to the list of endangered species.

CanT: Candidate Threatened; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Fish and Game Commission has formally noticed as being under review by the Department of Fish and Wildlife for addition to the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to the list of threatened species.

THR: State listed, threatened; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of special protection and management efforts.

RARE: State listed as rare: a native plant species, subspecies, or variety when, although not presently threatened with extinction, it is in such small numbers throughout its range that it may become endangered if its present environment worsens (Native Plant Protection Act of 1977).

SSC: CDFW Species of Special Concern; vertebrate species of concern due to declining population levels, limited ranges, and/or continuing threats that have made them vulnerable to extinction.

FP: Fully Protected; California Fish and Game Code states that Fully Protected species "...may not be taken or possessed at any time and no provision of this code or any other law shall be construed to authorize the issuance of permits or licenses to take any fully protected" species, although take may be authorized for necessary scientific research.

Delisted: Previously state listed as threatened or endangered, but no longer listed (e.g., due to recovery).

SA: CDFW Special Animal; wildlife of state conservation concern.

SH: All California sites are historical, still some hope of rediscovery.

SX: All California sites are historical, presumed extirpated.

PFB: Protected Fur-bearing Mammal under Title 14 of the California Code of Regulations.

None: The species has no state conservation status.

State Rank (S Rank): A reflection of the condition and imperilment of an element (plant, animal, vegetation community) throughout its range within the state. The S ranks are determined through a combination of rarity, threat, and trend factors, weighted more heavily on the rarity factors. Where correct category is uncertain, the S rank includes two categories or a question mark. Older ranks, which need to be updated, may still contain a decimal "threat" rank of .1, .2, or .3, where .1 indicates very threatened status, .2 indicates moderate threat, and .3 indicates few or no current known threats.

S1: Critically imperiled; imperiled in the state because of extreme rarity or some factor(s) making it especially vulnerable to extirpation from the state.

S2: Imperiled; imperiled in the state because of rarity due to very restricted range, very few populations, steep declines, or other factors making it very vulnerable to extirpation from the state or nation.

S3: Vulnerable; vulnerable in the state due to a restricted range, relatively few populations, recent and widespread declines, or other factors making it vulnerable to extirpation. S4: Apparently secure; uncommon but not rare, some cause for long-term concern due to declines or other factors.

S5: Secure; common, widespread, and abundant in the state.

SH: Possibly extirpated; species or community occurred historically in the state, and there is some possibility that it may be rediscovered. The element has not been seen for at least 20 years, but suitable habitat still exists.

SX: Presumed extirpated; species or community is believed to be extirpated from the state.

California Rare Plant Rank (CRPR): The *California Rare Plant Ranks* are a ranking system originally developed by the California Native Plant Society (CNPS) to better define and categorize rarity in California's plants. These ranks were previously known as the CNPS lists but were renamed to the *California Rare Plant Ranks* to better reflect the joint effort among the CNPS, the CDFW, and a wide range of botanical experts, who work together to assign a rarity ranking.

1A: Plants presumed extinct in California and rare/extinct elsewhere.
1B: Plants rare, threatened, or endangered in California and elsewhere.
2A: Plants presumed extirpated in California, but more common elsewhere.
2B: Plants rare, threatened, or endangered in California but more common elsewhere.
3: Plants about which we need more information.
4: Plants of limited distribution.
X.1: Extension to CRPR (e.g., 1B.1); seriously threatened in California.
X.2: Extension to CRPR (e.g., 1B.2); fairly threatened in California.
X.3: Extension to CRPR (e.g., 1B.3); not very threatened in California.
CBR: Considered but rejected.

U.S. Forest Service (USFS) designation:

S: Sensitive; plant and animal species identified by a regional forester that are not listed or proposed for listing under the Federal Endangered Species Act for which population viability is a concern, as evidenced by significant current or predicted downward trends in population numbers or density, or significant current or predicted downward trends in habitat capability that would reduce a species' existing distribution.

Bureau of Land Management (BLM designation:

S: Sensitive; plant and animal species requiring special management consideration to promote their conservation and reduce the likelihood for future listing under the Federal Endangered Species Act. Includes species designated as sensitive by the BLM State Director and all Federal Candidate species and Federal delisted species in the 5 years following delisting. Sensitive species are managed as special status species.

Western Riverside County Multiple Species Habitat Conservation Plan: Applied to species that are covered under state and federal permits for the MSHCP.

NAC: Species Not Adequately Conserved
AC: Species Adequately Conserved
(a): Surveys may be required for these species as part of wetlands mapping as described in Section 6.1.2 of the MSHCP.
(b): Surveys may be required for these species within Narrow Endemic Plant Species survey area as described in Section 6.1.3 of the MSHCP.
(c): Surveys may be required for these species within locations shown on survey maps as described in Section 6.3.2 of the MSHCP.
(d): Surveys may be required for these species within Criteria Area as described in Section 6.3.2 of the MSHCP.
(e): These Covered Species will be considered Adequately Conserved when conservation requirements identified in species-specific conservation objectives have been met. Species-specific conservation objectives for these species are presented in Section 9.0 of the MSHCP. Please refer to Table 9-3 of the MSHCP for specific conservation objectives that must be met for these species prior to including them on the list of Covered Species Adequately Conserved.
(f): These Covered Species will be considered Adequately Conserved when a Memorandum of Understanding is executed with the U.S. Forest Service that addresses management for these species on Forest Service Land. Refer to Table 9-3 of the MSHCP.
No entry: Not a Covered Species

Definitions of occurrence probability:

These definitions provide general guidance. Classifications for individual species may be modified based on biologists' experience and expert opinion.

Occurs: Species was detected during surveys or previously documented on the Project site or adjacent areas.
High: Species documented in the vicinity (i.e., within 5 miles) of the Project site and suitable habitat is present, but species not detected during surveys.
Moderate: Species documented in the vicinity of the Project site or suitable habitat present and site is within geographic and elevational range of the species.

Low:	Species not documented in the vicinity of the Project site or suitable habitat is marginal.
Not Expected:	Species not documented in the vicinity of the Project site and suitable habitat marginal or absent, or site is not within geographic and elevational range of the species.
Absent:	No potential for the species to occur due to lack of habitat, geographic or elevation range, species life history, survey results, etc.
Unknown:	No focused surveys have been performed in the region, and the species' distribution and habitat are poorly known.

APPENDIX C: PRECIPITATION DATA

Precipitation data from the Clark Remote Automatic Weather Station for October 2002 through September 2021, by water year (October 1 through September 30) (WRCC 2021).

From WRCC (2018)

APPENDIX D: SITE PHOTOGRAPHS

Agricultural fields, south-central area of site facing northwest (05.25.2021).

Agricultural fields, central area of site facing north; slopes with coastal scrub visible in background (05.25.2021).

Agricultural fields after mowing, south-central area of site facing east (11.08.2021).

Overview of site after agricultural fields mowed, from slope at north-central edge of site facing south; coastal scrub in foreground (11.08.2021).

California buckwheat scrub, northeastern area of site facing south (05.21.2021).

California buckwheat scrub, northeastern corner of site facing southwest (05.21.2021).

California buckwheat scrub/ruderal, east-central area of site facing southeast (05.21.2021).

California buckwheat scrub/ruderal, northwest area of site facing south (05.25.2021).

Chamise chaparral, south-central edge of site facing northwest (05.25.2021).

Area of chamise chaparral after it was mowed, south-central edge of site facing west (11.08.2021).

Scattered riparian vegetation along blue-line stream, northwest area of site facing southeast (11.08.2021).

Scattered riparian vegetation along blue-line stream, northwest-central area of site facing north (11.08.2021).

Offsite area along Wickerd Road, facing west (05.21.2021).

Offsite area along Wickerd Road, facing west (05.21.2021).

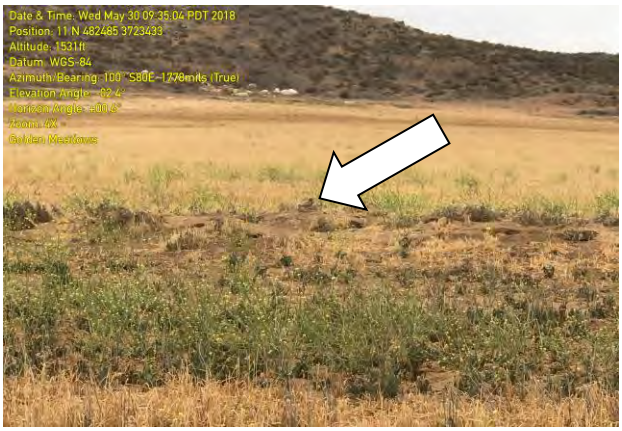
Areas of long-spined spineflower observation in 2017, facing east (11.08.2021). This area has been impacted by OHV use and the species was not observed during surveys in 2018, 2019, and 2021.

Southern California black walnut tree in riparian area, facing north (11.08.2021).

Southern California black walnut tree in riparian area, facing northwest, eucalyptus tree at right (11.08.2021).

Non-native pepper trees along western boundary of site, facing north (05.25.2021). Tree on left is offsite.

Scattered trees in the riparian area, facing south (05.25.2021).



Burrowing owl observed onsite on May 30, 2018. The owl was not observed during subsequent surveys in 2018. No owls or owl sign were observed during surveys in 2019 and 2021.

Burrowing owl burrow in 2018. This burrow was not occupied during surveys in 2019 and 2021.

Location of 2018 burrow in 2021 after agricultural fields were mowed, facing south (11.08.2021). There was no evidence of occupation before or after mowing.

Potentially suitable burrow with no signs of occupation, after agricultural fields mowed, southeast area of site facing east (11.08.2021).

Potentially suitable habitat for burrowing owl and potential burrow locations were thoroughly searched and no evidence of occupation was found in 2019 and 2021.

APPENDIX E: CNDDB FORMS

CNDDB forms for 2021 observations are provided below. The forms were submitted to CDFW online. The CNDDB only tracks nesting for Cooper's hawk and nesting was not observed, so a CNDDB form for this species is not required. The CNDDB does not track Nuttall's woodpecker or wrentit, so CNDDB forms for these species are not required.

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources

Case Number: TR 31194 Lot/Parcel No. _____ EA Number _____

Assessor's Parcel Number(s): 360-300-002, -003, -004, -005, -006, -009, 360-350-001

Date: December 17, 2021

Biological Resources: (Check the level of impact that applies to the following questions.)

Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

a) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

☐ ■ ☐ ☐

b) Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)?

☐ ■ ☐ ☐

c) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, or U. S. Wildlife Service?

☐ ■ ☐ ☐

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ■ ☐ ☐

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources

e) Have a substantial adverse effect on any riparian habitat, or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or the U.S. Fish and Wildlife Service?

☐ ■ ☐ ☐

f) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pools, coastal, etc.) through direct removal, filling, hydrological interruption)?

☐ ■ ☐ ☐

g) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

☐ ■ ☐ ☐

Findings of Fact:

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of PQP Conserved Lands approximately 0.68 miles north-northeast of the site (Ringing Rock Archaeological Site). Other than the Ringing Rock Site, there are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

There is one sensitive vegetation community present, arroyo willow thicket.

No state or federally listed plants were observed. Two special status plant species were observed, long-spined spineflower and southern California black walnut.

There is one immature coast live oak and other native and non-native trees present.

Coastal California gnatcatcher present and nesting on the site. White-tailed kite observed during previous surveys, but no nesting detected.

No vernal pools or ponding areas and no fairy shrimp habitat.

Riparian birds (least Bell's vireo, southwestern willow flycatcher, western yellow-billed cuckoo) considered absent.

Special status wildlife species detected: orange-throated whiptail, coastal (western) whiptail, coast horned lizard, Cooper's hawk, southern California rufous-crowned sparrow, great egret, great blue heron (fly over), Bell's sage sparrow, burrowing owl, Costa's hummingbird, wrentit, northern harrier, Nuttall's woodpecker, California horned lark, loggerhead shrike, rufous hummingbird, Lawrence's goldfinch, California thrasher, and San Diego black-tailed jackrabbit.

One (1) adult burrowing owl and an occupied burrow observed in 2018. No owls or owl sign observed in 2019 or 2021.
There is habitat suitable for nesting birds (including raptors) within and adjacent to the site.

The site is not within or adjacent to a wildlife corridor.

A mapped blue-line stream is present and includes MSHCP riparian/riverine habitat as well as state waters/wetlands and federal waters. Regulatory permitting and a DBESP will be required.

Proposed Mitigation:

Preconstruction surveys for burrowing owl.

Preconstruction surveys for nesting birds during nesting season.

Avoidance of riparian habitat and offsite compensation for impacts.

Monitoring Recommended:

Monitoring of active coastal California gnatcatcher nest sites during Project activities recommended.

Monitoring of Project activities that disturb vegetation or soil in and adjacent to the Avoidance Area is recommended.

Report Summary:

One (1) burrowing owl and one (1) occupied burrow were observed onsite in 2018. A winter burrowing owl survey, preparation of a Burrowing Owl Exclusion Plan, and preconstruction survey are recommended. One (1) inactive raptor nest is present, but no active nests were observed. Habitat suitable for nesting birds (including raptors) is present within and around the site and a preconstruction survey is recommended. Previous surveys identified one (1) listed species (coastal California gnatcatcher) and several special status species onsite, including white-tailed kite, northern harrier, coast horned lizard, coastal (western) whiptail, orange-throated whiptail, San Diego black-tailed jackrabbit, Cooper's hawk, California horned lark, great blue heron, Costa's hummingbird, and long-spined spineflower. There is no evidence of white-tailed kite nesting on the project site. Jurisdictional riparian/riverine areas were previously identified on the project site. Regulatory permits will be required for impacts to jurisdictional areas. No vernal pools or areas of potential habitat for fairy shrimp were observed or are present onsite.

APPENDIX D: CNDDB Forms 58

MANAGEMENT SUMMARY

L&L Environmental, Inc. (L&L) conducted breeding season burrowing owl and raptor nest surveys on Richland Communities' ±207-acre project (and associated offsite improvement areas) in the City of Menifee, California. The purpose of this work effort was to re-examine the subject property to determine presence/absence of burrowing owl and raptor nests on the site and potential for special status species, particularly white-tailed kite, to occur.

L&L has performed studies on this property for over a decade (beginning in 2003) under a number of contractors and proponents. This study reflects the most current field conditions and, where pertinent, makes comparative statements as to past and historic conditions.

Land use varies within and adjacent to the survey area and includes anthropogenic disturbances such as rural residential areas, active and fallow agricultural areas, unimproved roads, powerline easements, off-road vehicle activity, debris piles, and windblown debris. Two (2) roads are present on the property. One is located along the northern and eastern portion of the property where agricultural areas meet less disturbed sage scrub areas. This unimproved road begins at the eastern terminus of Daniel Road and exits at the southeastern corner of the site near the intersection of Evans Road and Ascot Way. Krubsack Road (unimproved) trends north to south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north.

The site consists of agricultural fields and a mix of disturbed to relatively undisturbed buckwheat scrub and chamise chaparral vegetation communities. The agricultural fields are dry farmed for wheat. The site has also been used for sheep grazing in the past, but no grazing was observed during the current survey.

A shallow drainage and mapped blue-line stream is present onsite (trending from south to north within the central portion of the site), as well as various other jurisdictional features. No vernal pools or areas of potential habitat for fairy shrimp were observed or are present onsite.

Based upon presence of relatively flat open areas with low-growing vegetation on large portions of the site, close proximity to a fresh water source, and recent records of burrowing owl in the vicinity, habitat suitable for use by burrowing owl was determined to be present on much of the subject property. There were no burrowing owl observations during biological surveys of the site in 2003, 2004, 2005, 2006, and 2011. L&L conducted focused late-season surveys on the site and surrounding buffer areas in August 2013 with negative results. However, one (1)

location was noted that may have been used in the recent past, based upon presence of a single feather found at an entrance to a hole beneath a grouping of medium-sized rocks. There was a rock immediately adjacent to the entrance that was evidently used for avian perching (species undetermined) based on the presence of droppings, but no other sign, including additional feathers, scat, prey bones, tracks or other indicators were found at the location.

Focused surveys for burrowing owl were not conducted in 2017, but general surveys included searches for burrowing owl and active burrows. No burrowing owl, occupied burrows, or burrowing owl sign were observed. Surveys in 2018 observed one (1) burrowing owl and one (1) active burrow and potential nesting site. The owl was observed during the survey on May 30, but was not observed during subsequent surveys. A preconstruction clearance survey for burrowing owl (valid for 30 days) will be required and winter burrowing owl surveys and preparation of a Burrowing Owl Exclusion Plan are recommended.

A white-tailed kite was observed flying over the site during a survey in 2011, but has not been observed subsequently. The California Natural Diversity Database (CNDDB) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the project site (CDFW 2018c). There are several large eucalyptus trees on and adjacent to the site that may be suitable for raptor nesting. There is a raptor nest onsite in a large eucalyptus tree and it may have been used by red-tailed hawk in the past, but it was not observed to be active in 2017 or 2018. No white-tailed kite nesting has been observed onsite.

Habitat suitable for nesting birds is present within and around the site. Presence of this potential habitat warrants a recommendation for a preconstruction survey for nesting birds prior to any site disturbance during the nesting season (generally February 1 through August 31). If nesting birds are present, avoidance of nest sites will be required and a buffer of at least 500 feet is recommended until juvenile birds have fledged and/or an authorized biologist has verified that the nest is no longer active.

Previous surveys identified one (1) listed species (coastal California gnatcatcher) and several special status species onsite, including white-tailed kite, northern harrier, coast horned lizard, San Diego black-tailed jackrabbit, Cooper's hawk, California horned lark, great blue heron, Costa's hummingbird, and long-spined spineflower.

1.0) INTRODUCTION

The following report was prepared by L&L Environmental, Inc. (L&L) for Richland Communities. It describes the results of biological surveys conducted on a proposed development located on lands within the City of Menifee. The project site consists of APNs 360-300-002, -003, -004, -005, -006, -009, and 360-350-001 (totaling ±207 acres) and portions of offsite APNs 360-180-009, 360-300-001, -008, 360-350-019, -022, -023, -024, 360-360-009, -010, -011, and 360-380-004 where improvements are planned.

Our assessment consisted of (1) a records search and literature review, conducted to determine the species of concern in the project area and proximity to closest documented special status species observations, and (2) field reconnaissance to identify presence/absence of habitat and species of concern (particularly burrowing owl and raptor nesting).

1.1) Location

The site is located in the Paloma Valley west of Interstate Highway 215 (I-215), south of Newport Road, and east of Murrieta Road (Figure 1). The site is located between Wickerd Road to the south and Garbani Road to the north. The project site is situated in Sections 15 and 16, Township 6 South, Range 3 West, within the USGS Romoland 7.5' series quadrangle map (Figure 2).

The site is generally bounded as follows: to the west by a mixture of actively cultivated and fallow agricultural areas, Evans Road (unimproved), and rural residential units; to the east by a mixture of disturbed and relatively undisturbed open space, Ascot Way (unimproved), and a Verizon Communications complex beyond; to the north by a mixture of disturbed and relatively undisturbed lands, rural residential areas, Garbani Road (unimproved), and a housing development beyond; and to the south by Wickerd Road (unimproved), rural residential areas, and a mix of disturbed and relatively undisturbed lands beyond (Figure 3).

In addition to surveys conducted on the main site, offsite improvement areas were included in these surveys. These included two (2) separate areas: 1) a 0.5 mile section of Wickerd Road between the southeast corner of the main site east to Haun Road and 2) an area south of the south-central portion of the main site boundary roughly located between the intersection of Wickerd Road and Bradley Road and west to approximately Krubsack Road.

1.2) Vegetation and Setting

Much of the subject property has been disturbed in association with previous dry-land farming and sheep grazing. As a result, these areas do not support native habitat communities. In the historically less disturbed areas of the property, remnants of California buckwheat scrub and chamise chaparral vegetation are present. Two (2) unimproved roads are present onsite.

A shallow drainage feature and mapped blue-line stream is present trending from the southwest/central to the northwest portion of the site. Much of this area has been impacted by agricultural activities and invasive plants, but several woody riparian species are present in association with this feature.

Land uses adjacent to the survey area include rural residential, agricultural, large animal husbandry, unimproved roads, powerline easements, off-road vehicle activity, storage, and debris piles. An unimproved road begins at the eastern terminus of Daniel Road and exits at the southeastern corner of the site near the Evans Road and Ascot Way intersection. Krubsack Road (unimproved) runs north-south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north.

The agricultural fields are dry farmed for wheat. During 2018 surveys, the wheat crop appeared to have been mown/harvested early in the spring, prior to the start of surveys. The site has also been used for sheep grazing in the past, but no grazing was observed during the 2018 survey.

1.3) Soils and Topography

Soils on the project site were mapped by the Natural Resources Conservation Service (2018) as a mixture of several soil types, including Wyman loam (WyC2), Vallecitos loam (VeC2), Porterville clay (PsC), Yokohl loam (YbC and YbE3), Cajalco fine sandy loam (CaC2 and CaD2), Cajalco rocky fine sandy loam (CbF2), Honcut sandy loam (HnC and HnD2), Las Posas loam (LaD2), and Las Posas rocky loam (LkD2 and LkF3) (Figure 4). The most common soils mapped for the subject property are Wyman loam on the central and western portion of the site (in farmed areas) and Las Posas rocky loams on densely vegetated hillsides within the northern and eastern portions of the site. Clay soils are relatively uncommon on the site, but Porterville clay is present near the southeastern portion of the property within the agricultural areas. Soils observed onsite range from mostly sandy-loamy within the farmed areas to rocky loamy on the

less disturbed vegetated hillsides. Cryptobiotic crusts are present, but only within less disturbed portions of the site away from previously farmed areas.

Topographically, much of the site is primarily flat and contains open lands with low-relief rocky outcrops and shallow depressions. Gently to steeply sloping hills and ridgelines are present within the northeastern portion of the property. The site has a combined maximum vertical relief of roughly 220 feet between highest and lowest points on the property, with elevation ranging from approximately 1,500 to 1,720 feet above mean sea level (AMSL).

Surrounding topographic features in the project vicinity include gently to steeply sloping hills and ridgelines interspersed with lower-lying relatively flat areas. Although most surrounding areas of the Paloma Valley are primarily flat, significant topographic features are present northwest and southwest of the property at elevations of approximately 1,760 to 1,820 feet AMSL. Bell Mountain, a significant topographic feature located approximately two (2) miles east of the subject property, rises to 1,848 feet AMSL.

2.0) REGULATORY ENVIRONMENT

2.1) Federal

2.1.1) Federal Endangered Species Act

By law, it is a requirement of the federal Endangered Species Act (FESA), 1973 (as amended) at Section 7(a)(2) that federal agencies ensure that any action authorized, funded, or carried out by a federal agency is not likely to jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of critical habitat. In order to comply with this requirement, the federal agency must conduct a Biological Assessment (BA), in which effects to listed species are analyzed and disclosed in the form of an "effects determination."

Section 7 requires federal agencies to consult with the U. S. Fish and Wildlife Service (USFWS) should it be determined that their actions may affect federally listed threatened or endangered species. Section 9 of FESA prohibits "take" (e.g., harm, harassment, pursuit, injury, kill) of federally listed wildlife. "Harm" is further defined to include habitat modification or degradation where it kills or injures wildlife by impairing essential behavioral patterns such including breeding, feeding, or sheltering. Take that is incidental to otherwise lawful activities can be authorized under Section 7 of FESA.

Procedures for obtaining a permit for incidental take are identified under Section 7 of FESA for federal properties or where federal actions are involved and are identified under Section 10 of FESA for non-federal actions. During the Section 7 process, measures to avoid and minimize project effects to listed species and their habitat will be identified and incorporated into a Biological Opinion (prepared by the USFWS) that includes an incidental take by the federal agency and applicant.

The County of Riverside has been issued a Section 10(a) permit for the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), discussed below.

2.1.2) Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711) is an international treaty that makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 CFR Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Executive Order 13186 ensures that

environmental analyses of federal actions required by the National Environmental Policy Act (NEPA) or other established environmental review processes evaluate the effects of actions on migratory birds, with emphasis on species of concern. Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young) or loss of habitat upon which the birds depend could be considered "take" and constitute a violation of the MBTA.

2.2) State

2.2.1) California Endangered Species Act

California Endangered Species Act (CESA) definitions of endangered and threatened species parallel those defined in the FESA. The CESA defines an endangered species as ". . . a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes including loss of habitat, change in habitat, overexploitation, predation, competition or disease." Endangered species are in serious danger of becoming extinct and threatened species are likely to become endangered species in the foreseeable future (according to Sections 2062 and 2067, respectively, of the California Fish and Game Code). Candidate species are those under formal review by the CDFW for listing as endangered or threatened (Section 2067). Prior to being considered for protected status, the CDFW designates a species as being of special concern. Species of Special Concern are wildlife species for which the CDFW has information indicating population decline. Plant species of concern are designated by California Rare Plant Ranks.

2.2.2) California Natural Diversity Database

The California Natural Diversity Database (CNDDB) includes documented occurrences of special status species that have been reported to the CDFW. It also includes ranks of overall condition of sensitive species and vegetation communities on global (throughout its range) and state (within California) levels. State ranking is numerical, ranging from one to five (S1 to S5), with one indicating very few remaining individuals or little remaining habitat and five indicating a demonstrably secure to ineradicable population condition.

2.2.3) California Rare Plant Ranks

The California Native Plant Society (CNPS) Inventory of Rare and Endangered Species includes documented occurrences of special status plant species that are available through the

Consortium of California Herbaria and other sources. The CNPS, in coordination with CDFW, has cataloged California's rare and endangered plants into lists according to population distributions and viability. These lists are numbered and indicate the following California Rare Plant Ranks (CRPR): (1A) presumed extinct in California; (1B) rare, threatened, or endangered throughout their range; (2A) presumed extirpated in California, but more common in other states; (2B) threatened or endangered in California, but more common in other states; (3) more information is needed to establish rarity; and (4) plants of limited distribution in California (i.e., naturally rare in the wild), but whose populations do not appear to be susceptible to threat. A CRPR may also have an extension (e.g., 1B.x) that indicates current level of threat: seriously threatened (x.1), moderately threatened (x.2), or not very threatened (x.3).

2.2.2) California Environmental Quality Act

The California Environmental Quality Act (CEQA) and CEQA Guidelines (§ 15000 et seq.) require identification of environmental effects from discretionary projects. Significant effects are to be mitigated by avoidance, minimization, rectification, or compensation whenever possible.

Effects to all state and federal listed species are considered significant under CEQA. In addition to formally listed species, CEQA considers effects to species that are demonstrably endangered or rare as important or significant. These definitions can include state designated species of special concern, federal candidate and proposed species, CNDDB tracked species, and CRPR list 1B and list 2 plants.

Appendix G of the CEQA Guidelines specifically addresses biological resources and encompasses a broad range of resources to be considered.

2.2.3) California Fish and Game Code, Sections 3503 and 3513

California Fish and Game Code Section 3503 prohibits take, possession, or needless destruction of bird nests or eggs except as otherwise provided by the Code; Section 3503.5 prohibits take or possession of birds of prey or their eggs except as otherwise provided by the Code; and Section 3513 provides for the adoption of the provisions of the federal Migratory Bird Treaty Act.

2.3) Local

2.3.1) Western Riverside County Multiple Species Habitat Conservation Plan

The County of Riverside, including eight (8) additional land jurisdictions and 14 cities, have prepared a Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County. The MSHCP will build upon existing preserves and provide connectivity and wildlife corridors throughout the region. The MSHCP proposes to conserve approximately 500,000 acres and 146 different species. Approximately 347,000 acres are anticipated to be conserved on existing Public/Quasi-Public lands with additional contributions of approximately 153,000 acres from willing sellers (http://www.rcip.org).

The MSHCP was approved by the county on June 17, 2003 and an Implementation Agreement (IA) between the USFWS, the CDFW, and the County was executed and an associated USFWS Section 10(a)(1)(B) Permit (No. TE-088609) was issued on June 22, 2004. The permit grants take authorization for certain species identified in the permit as "Covered Species Adequately Conserved."

The MSHCP establishes seven (7) core reserve areas and associated linkages between proposed and existing core areas. The MSHCP divides areas into Cells using USGS coordinates. According to the Riverside County Integrated Project website, parcels that compose the current project site are located within Sun City/Menifee Valley Area Plan. Conservation efforts for the project site will be evaluated with regard to sensitive species identified as not adequately conserved and observed onsite, riverine/riparian or vernal pool habitat and their associated sensitive species (if located onsite), fairy shrimp, jurisdictional areas, and sage scrub.

Focused surveys are required for species identified as not adequately conserved under the MSHCP if suitable habitat is present onsite. If focused surveys are determined necessary and species identified as not adequately conserved under the MSHCP occur onsite, the proponent may be required to undergo a Habitat Acquisition and Negotiation Strategy (HANS) determination with the County of Riverside. If a single family home or mobile home is to be placed on an existing legal lot, permitting will be reviewed according to the procedures outlined in MSHCP Section 6.1.1, *Expedited Review Process for Single-Family Homes or Mobile Homes To Be Located on an Existing Lot Within the Criteria Area*.

Section B (Species Accounts) of Volume 2 of the MSHCP (Dudek 2003) lists the following objectives for burrowing owl conservation/protection:

Objective 1

Include within the MSHCP Conservation Area at least 27,470 acres of suitable primary habitat for the burrowing owl including grasslands.

Objective 2

Include within the MSHCP Conservation Area at least 5 Core Areas and interconnecting linkages. Core areas may include the following: (1) Lake Skinner/Diamond Valley Lake area (Existing Core C plus Proposed Extension of Existing Cores 5, 6, 7; 29,060 acres); (2) playa west of Hemet (Proposed Noncontiguous Habitat Block 7; 1,250 acres); (3) San Jacinto Wildlife Area/Mystic Lake area including Lake Perris area (Existing Core H; 17,470 acres); (4) Lake Mathews (Existing Core C plus Proposed Extension of Existing Cores 2; 23,710 acres); and (5) along the Santa Ana River (9,670 acres). The Core Areas should support a combined total breeding population of approximately 120 burrowing owls with no fewer than five pairs in any one Core area.

Objective 3

Include within the MSHCP Conservation Area at least 22,120 acres of suitable secondary habitat for the burrowing owl including playas and vernal pools, and agriculture outside of the Core Areas identified above. Areas where additional suitable habitat could be conserved include west of the Jurupa Mountains, near Temescal Wash (i.e., vicinity of Alberhill), near Temecula Creek, within the Lakeview Mountains, Banning, the Badlands, Gavilan Hills, and Quail Valley.

Objective 4

Include within the MSHCP Conservation Area the known nesting locations of the burrowing owl at Lake Perris, Mystic Lake/San Jacinto Wildlife area, Lake Skinner area, the area around Diamond Valley Lake, playa west of Hemet, Lakeview Mountains, Lake Mathews/Estelle Mountain Reserve and Sycamore Canyon Regional Park.

Objective 5

Surveys for burrowing owl will be conducted as part of the project review process for public and private projects within the burrowing owl survey area where suitable habitat is present (see Burrowing Owl Survey Area Map, Figure 6-4 of the MSHCP, Volume I). The locations of this species determined as a result of survey efforts shall be conserved in accordance with procedures described within Section 6.3.2, MSHCP, Volume I and the guidance provided below:

Burrowing owl surveys shall be conducted utilizing accepted protocols as follows. If burrowing owls are detected on the project site then the action(s) taken will be as follows:

If the site is within the Criteria Area, then at least 90 percent of the area with long-term conservation value will be included in the MSHCP Conservation Area. Otherwise:

1) If the site contains, or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and the

surrounding area supports fewer than 3 pairs of burrowing owls, then the on-site burrowing owls will be passively or actively relocated following accepted protocols.

2) If the site (including adjacent areas) supports three or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite.

The survey and conservation requirements stated in this objective will be eliminated when it is demonstrated that Objectives 1 – 4 have been met.

Objective 6

Pre-construction presence/absence surveys for burrowing owl within the survey area where suitable habitat is present will be conducted for all Covered Activities through the life of the permit. Surveys will be conducted within 30 days prior to disturbance. Take of active nests will be avoided. Passive relocation (use of one-way doors and collapse of burrows) will occur when owls are present outside the nesting season.

Objective 7

Translocation sites for the burrowing owl will be created in the MSHCP Conservation Area for the establishment of new colonies. Translocation sites will be identified, taking into consideration unoccupied habitat areas, presence of burrowing mammals to provide suitable burrow sites, existing colonies and effects to other Covered Species. Reserve Managers will consult with the Wildlife Agencies regarding site selection prior to translocation site development.

3.0) METHODS AND PERSONNEL

3.1) Literature Review

Pertinent literature was reviewed to identify local occurrences and habitat requirements of special status species and communities occurring in the region. Literature reviewed included compendia provided by resource agencies (CDFW 2018a, 2018b; USFWS 2018), the Western Riverside County MSHCP (Dudek 2003), California Natural Diversity Database (CNDDB; CDFW 2018c) reports for the vicinity, and reports of previous surveys completed for the site (L&L 2003-2018).

Latin names of plants follow *The Jepson Manual* (Hickman 1993) with updates from the online Jepson eFlora (Jepson 2018). Latin names of animals follow *A Field Guide to Western Reptiles and Amphibians* (Stebbins 1985), *California Mammals* (Jameson and Peeters 1988), *Checklist of North American Birds* (American Ornithologists' Union 1983, 1989) and *The Sibley Guide to Birds* (Sibley 2000), and *American Insects: A Handbook of the Insects of America North of Mexico* (Arnett 2000). Vegetation community classifications follow Sawyer et al. (2009). Current conservation status of plant and wildlife species determined from CDFW (2018a, 2018b). Other sources consulted for information regarding biological resources include Brown (1994), Recon (1985), Schoenherr (1990), and Small (1994).

3.2) Survey Methods

A habitat assessment, burrow survey, and focused burrowing owl surveys were conducted on four (4) site visits in May, June, and July 2018 (Table 1). The surveys were conducted in accordance with the Burrowing Owl Survey Instructions for the MSHCP. In addition, the site was examined to determine the possible presence/absence of nesting raptors on the property, in particular white-tailed kite.

MSHCP Burrowing Owl Survey Instructions require surveys to be conducted during the breeding season from March 1 to August 31. Surveys should be conducted during weather conditions that are conducive to detecting owls and owl sign. Surveys are not acceptable if they are conducted during rain, high winds (> 20 mph), dense fog, or temperatures over 90° F.

Surveys should be conducted in the morning one (1) hour before sunrise to two (2) hours after sunrise or in the early evening two (2) hours before sunset to one (1) hour after sunset. Surveys were generally conducted in the early morning hours.

Surveys were conducted by L&L field biologist Guy Bruyea. Mr Bruyea has extensive experience with surveys for burrowing owl and nesting birds. Weather conditions during the surveys are summarized in Table 1.

Table 1. Survey Information.

Date	Time	Sunrise*	Weather	Wind (mph)
05.24.2018	1030-1330	0545	Partly cloudy, 77-82º F	1-3
05.30.2018	0700-1030	0543	Cloudy, 68-77º F	0-4
06.14.2018	0730-1100	0541	Sunny/Clear, 76-87º F	3-8
07.04.2018	0700-1000	0546	Sunny/Clear, 74-86º F	0-2

*sunrise times from timeanddate.com

A total of about 13 person-hours were spent onsite. The site was examined for suitable burrow sites and for signs of occupation by BUOW, including pellets, feathers, whitewash, prey remains, and eggshell fragments, as well as individual BUOW. A search for potentially suitable burrows within dirt, wood, and rock debris piles, artificially created berms, and other locations was conducted during the surveys. The surveys were concentrated in areas typically associated with BUOW habitat, including open areas onsite and areas where California ground squirrel activity (i.e., suitable burrows) was expected. An additional 150-meter (500-foot) buffer area surrounding the site was visually inspected, where possible, in areas identified as potential BUOW habitat. Any developed areas were visually surveyed with binoculars due to trespassing concerns on private property.

Transects were walked throughout the property where suitable habitat is present. Coupled with binocular surveys of any restricted areas, this allowed for complete visual ground coverage of the survey area. Distance between transects was approximately 15 to 20 meters.

After discovery of the active burrowing owl burrow on May 30, subsequent surveys included time spent surveilling the burrow, from a distance, for any activity or additional sightings of burrowing owl adults or young.

In addition, the site was examined to determine the possible presence/absence of nesting raptors on the property, in particular white-tailed kite. This survey primarily focused on examining trees on and within 500 feet of the project site for evidence of raptor nesting.

3.3) Species Information

3.3.1) Burrowing Owl

Burrowing owl (*Athene cunicularia*) is protected under the federal Migratory Bird Treaty Act and California Fish and Game Code and is a CDFW Species of Special Concern. Under the MSHCP, surveys are required in certain areas and mitigation is required as described in Section 2.3.

Burrowing owl is a small, ground-dwelling owl found in open dry grassland, desert, or shrubland areas and in uncultivated agricultural areas, rangelands, and other open areas with low-growing vegetation. It ranges throughout the western U. S., Canada, and Mexico. It is a small (approximately 9 to 11 inches in height) pale brown owl with white-colored "eyebrows" and throat, yellow eyes, a short stubby tail, and long legs. Males are generally larger and more lightly colored than females. Burrowing owl is the most diurnal of owl species, but is considered mostly crepuscular (usually active around sunrise and sunset). Arthropods (mainly beetles and grasshoppers) make up a large portion of their diet, especially during the breeding season. Burrowing owls are opportunistic feeders and will readily eat small mammals (primarily mice, gophers, and ground squirrels), lizards, amphibians, and small birds.

Burrows are an essential element of burrowing owl habitat. Although burrowing owls can excavate their own burrows in soft soils, they typically inhabit abandoned burrows of small burrowing mammals, such as ground squirrels and pocket gophers. Burrowing owl has also been known to use man-made structures such as cement culverts, debris piles, and other artificial burrows. Occupancy of burrowing owl habitat can be verified at a site by observation of at least one (1) owl or its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance (CBOC 1993).

A site is considered occupied if at least one (1) owl has been identified onsite in the past three (3) years, because (if undisturbed) burrowing owls "exhibit high site fidelity, reusing burrows year after year" (Rich 1984, Feeny 1992). The range of this species is throughout the western United States and Mexico, but it is increasingly uncommon in southern California.

3.3.2) White-tailed Kite

White-tailed kite (*Elanus leucurus*) is a CDFW Fully Protected species. The classification of Fully Protected was California's initial effort to identify and protect rare wildlife species.

With a few exceptions, Fully Protected species have subsequently been listed under the California and/or Federal Endangered Species Acts. One of the exceptions is white-tailed kite, which is not state or federally listed, but retains its Fully Protected status.

The white-tailed kite forages in open grasslands, farmlands, meadows, and wetlands. Nests are located near foraging areas in substantial groves of dense, broad-leafed trees. Nests are built near the top of oaks, willows, or other trees, usually between 20 to 100 feet above the ground. The nest is composed of loosely piled sticks, lined with grass, straw, or rootlets. White-tailed kite breeds from February to October, with a peak from May to August (Zeiner et al. 1990).

4.0) RESULTS

4.1) Literature Review Results

The project site is within the area covered by the Western Riverside County MSHCP. The MSHCP Conservation Summary Report identified the site as requiring an assessment with regard to potential habitat and presence/absence of burrowing owl. This and previous reports fulfill the MSHCP requirement of habitat assessment and presence/absence surveys for burrowing owl. Figure 5 shows the project site in relation to MSHCP core areas and linkages.

The 2006 Final Environmental Impact Report (EIR) for the project (T&B 2006) includes a mitigation measure (4.3-2) requiring a pre-construction survey for burrowing owl within 30 days prior to grading. If burrowing owl is present, mitigation is required per the MSHCP:

> If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.
>
> If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

The EIR also includes a mitigation measure (4.3-5) requiring a nesting raptor survey prior to issuance of grading permits and a CDFW Incidental Take Permit (2080 permit) if white-tailed kite are documented as nesting on the project site.

The CNDDB (CDFW 2018c) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the project site (Figure 6):

> Occurrence 38 is approximately 9.3 miles south-southwest of the project site. The occurrence is located at the Santa Rosa Plateau Preserve within oak savannah and native grassland at an elevation of 1,950 feet. Successful nesting was last documented in 1988 and 1989 and the occurrence is presumed extant. Google Earth images show undisturbed habitat present in that area.

Occurrence 39 is approximately 9.2 miles southwest of the project site. The occurrence is described as located on private land between two (2) parcels of Santa Rosa Plateau Preserve property. The habitat is oak savannah and native grassland at an elevation of 1,820 feet. The nest was last observed in 1989 (active nest, outcome unknown) and noted as threatened by proposed development. Examination of Google Earth images shows undisturbed habitat present in that area. The occurrence is presumed extant.

Occurrence 62 is approximately 7.5 miles southeast of the project site in Murrieta. The occurrence is located in southern riparian scrub habitat at an elevation of 1,240 feet. The record notes that the area was proposed for development, and Google Earth images now show the occurrence within a narrow area of habitat surrounded by residential developments. A pair of white-tailed kites was last observed in 1999. The occurrence is presumed extant.

Occurrence 112 is approximately 9.4 miles west-northwest of the project site and just north of Lake Elsinore. The occurrence is located in willow riparian woodland at an elevation of 1,258 feet. Successful nesting was documented in 2006. Google Earth images show undisturbed habitat at that location. The occurrence is presumed extant.

Occurrence 115 is approximately 7.1 miles northeast of the project site. The occurrence is located in a small grove of trees associated with a rural residence in Winchester, north of Diamond Valley Lake. Agricultural fields are also present in the area. Successful nesting was documented in 2005 and 2006. Google Earth images show trees and agricultural fields remain in the area, as described in the CNDDB record. The occurrence is presumed extant.

4.2) Vegetation Communities

Much of the subject property has been disturbed by recent and historic cultivation and sheep grazing and does not support native habitat. The agricultural fields are dry farmed for wheat. During 2018 surveys, the wheat crop appeared to have been mown/harvested early in the spring, prior to the start of surveys.

Less disturbed areas are also present, primarily in the northeastern portions of the site, with a mixture of disturbed and relatively undisturbed California buckwheat scrub and chamise chaparral. Sparse riparian vegetation and trees are found along the blue-line stream in the northwestern/central portion of the site (Figure 7).

Evidence of widespread sheep grazing was observed throughout all areas of the site in 2013. Hillsides containing California buckwheat scrub along the farmland edges, especially to the north and east, had been severely damaged by sheep grazing. Very few annuals remained (none in some areas) and many of the perennials have been stripped of vegetation and/or trampled. No evidence of recent sheep grazing was observed during surveys in 2017 and 2018 and regrowth of native annuals and perennials was observed in the buckwheat scrub areas.

Relatively undisturbed California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance) is present on the eastern and northern (primarily northeastern) portion of the site on south, west, and east-facing slopes containing numerous rocky outcrops. Native shrubs and other conspicuous plants commonly observed in these areas include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), white sage (*Salvia apiana*), brittlebush (*Encelia farinosa*), yellow bush penstemon (*Keckiella antirrhinoides*), wishbone bush (*Mirabilis laevis* var. *crassifolia*), sweetbush (*Bebbia juncea*), blue elderberry (*Sambucus nigra* ssp. *cerulea*), and black sage (*Salvia mellifera*). Approximately 44.2 acres of California buckwheat scrub is present onsite and an additional ±0.6 acre is located within offsite improvement areas. Open patches can be found throughout portions of the buckwheat scrub onsite containing a mixture of native and non-native annuals. This vegetation community is ranked by CDFW (2018d) as S5 (secure – common, widespread, and abundant) and it is not considered sensitive.

Chamise chaparral (*Adenostema fasciculatum* Shrubland Alliance) or chamise–black sage chaparral (*Adenostema fasciculatum–Salvia mellifera* Shrubland Alliance) is found mainly in small patches of remnant habitat, excluding the east-central property boundary where some relatively dense stands remain and mix with California buckwheat scrub. Common species

found in the chaparral areas onsite are chamise (*Adenostoma fasciculatum*), black sage, and other perennials. Approximately ±2.1 acres of chaparral are present onsite, with an additional ±0.6 acre located within offsite improvement areas. CDFW ranks these chaparral communities as S5 and they are not considered sensitive.

Arroyo willow thickets (*Salix lasiolepis* Shrubland Alliance) and mulefat thickets (*Baccharis salicifolia* Shrubland Alliance) are present along a degraded blue-line stream in the northwestern/central portions of the site. This area is sparsely inhabited by arroyo willow (*Salix lasiolepis*), mulefat (*Baccharis salicifolia*), or a combination of these species. A single Fremont cottonwood tree (*Populus fremontii* ssp. *fremontii*) and scattered non-native tamarisks (*Tamarix* species) were also observed. The understory is dominated by mostly weedy annuals. Approximately 2.3 acres of this habitat is present onsite. CDFW ranks both of these communities as S4 (apparently secure – uncommon but not rare, some cause for long-term concern due to declines or other factors) and they are not considered sensitive.

Approximately 75 percent of the site is composed of agricultural areas under cultivation for wheat. During 2018 surveys, the wheat crop appeared to have been mown/harvested early in the spring, prior to the start of surveys. Weedy annuals, mostly mustards, have proliferated in the fields. Disturbed habitat on the site includes unvegetated areas (such as roads) and areas that contain mostly non-native plant species, including ornamentals and ruderal invasive species. There are ±158.5 acres of disturbed and/or agricultural land onsite, with an additional ±2.5 acres within offsite improvement areas.

4.3) Plant Species

Under the MSHCP, no surveys or assessments were required for Narrow Endemic, Criteria Area, or additional needs botanical species on the project site. The site does not support habitat, soils, and/or vegetation associated with naturally occurring vernal pools and would therefore not support associated special status plant species, nor were these species observed.

One (1) special status plant species was observed onsite in 2017, long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*; CRPR 1B.2). Two (2) plants were observed on clay soils in the northeast portion of the site along an east-west ridgeline. Under the MSHCP, this species is considered to be adequately conserved.

A list of all plant species identified onsite during past and present surveys is included in Appendix A.

4.4) Wildlife Species

A combined total of 59 wildlife species have been detected during all biological surveys of the site by L&L. A list of all wildlife species identified onsite is provided in Appendix A.

Biological surveys conducted on the project site by L&L from 2003 to 2017 (L&L 2003a, 2003b, 2004a, 2004b, 2004c, 2005, 2006a, 2006b, 2007, 2011, 2013, 2017) detected the following special status species (Figures 8 through 10):

- coastal California gnatcatcher (*Polioptila californica californica*; federal threatened, CDFW Species of Special Concern, MSHCP Adequately Conserved),
- white-tailed kite (*Elanus leucurus*; California Fully Protected, MSHCP Adequately Conserved),
- coast horned lizard (*Phrynosoma blainvillii*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- northern harrier (*Circus cyaneus*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- San Diego black-tailed jackrabbit (*Lepus californicus bennetti*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- orange-throated whiptail (*Aspidoscelis hyperythra*; CDFW Watch List, MSHCP Adequately Conserved),
- Cooper's hawk (*Accipiter cooperi*; CDFW Watch List, MSHCP Adequately Conserved),
- California horned lark (*Eremophila alpestris actia*; CDFW Watch List, MSHCP Adequately Conserved),
- Costa's hummingbird (*Calypte costae*; CDFW Special Animal, not covered by MSHCP).
- great blue heron (fly over) (*Ardea herodias*; CDFW Special Animal, MSHCP Adequately Conserved),

All of these species are considered Adequately Conserved under the MSHCP except Costa's hummingbird, which is not covered under the MSHCP.

Four (4) special status species were observed or detected during the current survey (Figure 11): burrowing owl, coastal California gnatcatcher, California horned lark, and black-tailed jackrabbit. All were previously observed onsite, except burrowing owl.

4.4.1) Burrowing Owl

Previous focused surveys for burrowing owl (2005, 2006, 2007, 2011, and 2013) did not detect burrowing owls utilizing the site. However, one (1) location may have been used in the relatively recent past, based on presence of a single feather found during the 2013 survey at an entrance to a hole beneath a grouping of medium-sized rocks. No burrowing owl or sign was observed during 2017 general biological surveys.

Focused surveys in 2018 observed a single burrowing owl onsite and one (1) burrow with signs of occupation (Figure 11). The owl was observed on May 30, 2018. The occupied burrow was found very close to where the owl was observed. Pellets, scat, feathers, owl tracks, and pieces of shredded cloth were observed at the burrow entrance. It was not determined if the owl was using the burrow for nesting purposes. The burrow was surveilled during subsequent site visits, but there were no additional observations of burrowing owl adults or juveniles. Coyote and/or dog tracks were observed around the burrow, but the burrow itself was not disturbed and there were no signs that owls had been predated. No other active burrows or burrowing owls were observed during surveys.

California ground squirrel activity onsite has increased substantially from that observed in 2017, possibly due to a recent reduction in disturbance associated with farming (i.e., mowing the crop early and leaving the fields undisturbed afterward). This has led to an increase in potential burrows for burrowing owl.

4.4.2) Raptor Nests

One (1) white-tailed kite was observed flying over the property in 2011. This species was not observed utilizing the site for foraging or nesting during previous surveys.

There is habitat suitable for nesting birds (including raptors) within and around the site. Some relatively large eucalyptus trees are present on the western portion of the site and along the western boundary along Evans Road. Red-tailed hawks (*Buteo jamaicensis*) have been observed onsite and may be utilizing the trees for nesting.

A potential (unoccupied) raptor nest site was found in a large eucalyptus tree within the central portion of the site in 2013. It is located in a eucalyptus tree in the west-central portion of the site (Figure 11). No raptors were observed utilizing the nest site during surveys in 2013 and 2017 or

the current survey. Although potentially suitable habitat is present, there is no evidence that white-tailed kite is using the site for nesting.

4.5) Jurisdictional Areas (MSHCP Riparian/Riverine and Vernal Pool Habitat)

The subject site contains woody, water-dependent vegetation. Arroyo willow, Fremont cottonwood, and mulefat are present within the mapped features (Figure 12). An ephemeral stream is present and mapped as a USGS blue-line stream. Surface water was not observed within any of the onsite drainage features during the 2013 or 2017 surveys. An updated jurisdictional delineation was completed in 2011, revised in 2013, and updated and verified in 2018 (L&L 2011, 2018).

Soil types within the study area are not consistent with an alkali playa or vernal pool complex and pools or depressions characteristic of vernal pool habitat were not noted as present onsite. No MSHCP species listed for protection associated with riparian/riverine areas and vernal pools were observed. No fairy shrimp or potential fairy shrimp habitat was observed during this study.

5.0) IMPACTS AND RECOMMENDATIONS

The purpose of this study was to identify biological resources on the project site, specifically burrowing owl and raptor nesting, white-tailed kite in particular.

The impacts and recommendations identified are based on the literature review, knowledge of species and habitats in the site vicinity, and the biological field survey. The information in this section is intended to serve as a planning tool for making decisions about future development of the project site.

One (1) burrowing owl and one (1) active burrow were identified onsite during the breeding season survey. Disturbance of occupied burrows must be avoided during the breeding season. CDFW recommends a buffer of 1,640 feet (500 meters) between a nesting site and high levels of disturbance (such as grading). Continued farming is recommended to discourage burrowing owls. If three (3) or more pairs of burrowing owl are found to be utilizing the site and there are greater than 35 acres of suitable habitat that is non-contiguous with MSHCP Conservation Area lands, the MSHCP requires conservation of at least 90 percent of the area with long-term conservation value and burrowing owl pairs.

Burrowing owls may be relocated outside of the nesting season. A winter burrowing owl survey is recommended to determine if the owl is a resident. Preparation of a Burrowing Owl Exclusion Plan is recommended to address relocation of the owl(s) on the project site. A preconstruction clearance survey (valid for 30 days) will also be required.

Trees and other vegetation and habitat suitable for nesting birds are present within and around the site and a potential raptor nest site (unoccupied) is present onsite. Based upon presence of potential nesting habitat, a preconstruction clearance survey for nesting birds (raptors in particular) is recommended prior to any site disturbance during the nesting season (generally February 1 through August 31). If nesting birds are present, avoidance of nests will be required and a buffer of at least 500 feet is recommended until juvenile birds have fledged and/or an authorized biologist has verified that the nest has become inactive.

Previous surveys identified one (1) special status plant species, long-spined spineflower. Under the MSHCP, this species is considered to be Adequately Conserved. Special status wildlife species observed during surveys include coastal California gnatcatcher, California horned lark, San Diego black-tailed jackrabbit, great blue heron, coast horned lizard, Cooper's hawk, white-tailed kite, northern harrier, and Costa's hummingbird. All of these species are considered

Adequately Conserved under the MSHCP except Costa's hummingbird, which is not covered under the MSHCP.

Soil types are not consistent with an alkali playa or vernal pool complex and pools or depressions characteristic of vernal pool habitat were not identified onsite. No MSHCP species listed for protection associated with riparian/riverine areas and vernal pools were observed. No fairy shrimp or potential fairy shrimp habitat was observed during this study.

Jurisdictional areas were identified onsite and have been reported previously. Regulatory permits from the USACE, CDFW, and RWQCB will be required for impacts to jurisdictional areas.

APPENDIX A: Plant and Wildlife Species

Table 2. Plant and wildlife species. Plant and wildlife species identified on the Golden Meadows site during surveys from 2003 to 2018. One asterisk (*) indicates a non-native species; two asterisks (**) indicates a special status species; a question mark (?) indicates uncertainty regarding identification or native status. Wildlife species list excludes invertebrates.

Plants [N=115]

	Scientific Name	Common Name
	VASCULAR PLANTS	
	Dicotyledons	
	ADOXACEAE	**MUSKROOT FAMILY**
	Sambucus nigra ssp. *cerulea* (*S. mexicana*)	Mexican elderberry, blue elderberry
	AMARANTHACEAE	**AMARANTH FAMILY**
*	*Amaranthus albus*	Tumbleweed, tumbling pigweed
	ANACARDIACEAE	**SUMAC or CASHEW FAMILY**
*	*Schinus molle*	Peruvian pepper tree
	APIACEAE	**CELERY FAMILY**
	Daucus pusillus	Rattlesnake weed, wild carrot
	ASTERACEAE	**ASTER FAMILY**
	Acourtia microcephala (*Perezia microcephala*)	Scapellote, perezia
	Ambrosia acanthicarpa	Annual bur-sage, annual sandbur
*	*Anthemis cotula*	Mayweed, dog mayweed
	Artemisia californica	California sagebrush
	Baccharis salicifolia (*B. glutinosa*)	Mulefat
	Bebbia juncea	Sweetbush
*	*Centaurea melitensis*	Tocalote
	Chaenactis artemisiifolia	White pincushion, wormwood pincushion
	Corethrogyne filaginifolia var. *filaginifolia* (*Lessingia filaginifolia*)	California-aster, sand-aster
	Deinandra fasciculata (*Hemizonia fasciculata*)	Fascicled tarplant, slender tarweed
	Encelia farinosa	Brittlebush
	Erigeron canadensis (*Conyza canadensis*)	Horseweed, mare's tail
	Eriophyllum confertiflorum	Golden-yarrow
	Eriophyllum multicaule	Many-stem woolly daisy
	Gutierrezia californica (*G. bracteata*)	California matchweed

	Scientific Name	**Common Name**
	Helianthus annuus	Western sunflower
*	*Lactuca serriola*	Prickly lettuce
	Lasthenia californica (L. chrysostoma)	California goldfields
	Layia platyglossa	Tidy-tips
	Logfia filaginoides (Filago californica)	California filago
*	*Matricaria discoidea (Chamomilla suaveolens, M. matricarioides)*	Pineapple weed
	Rafinesquia californica	California chicory
*	*Senecio vulgaris*	Common groundsel
*	*Sonchus oleraceus*	Common sow thistle
	Stephanomeria virgata	Wreath plant
	Stylocline gnaphaloides	Everlasting neststraw
	Tetradymia comosa	Hairy horsebrush, common-thorn
	Uropappus lindleyi (Microseris lindleyi, M. linearifolia)	Silverpuffs
*?	*Xanthium spinosum*	Spiny cocklebur
	BORAGINACEAE	**BORAGE OR WATERLEAF FAMILY**
	Amsinckia intermedia (A. menziesii var. intermedia)	Large flower rancher's fiddleneck
	Cryptantha intermedia	Common cryptantha
	Heliotropium curassavicum	Wild heliotrope
	Pectocarya linearis	Slender pectocarya
	Phacelia minor	Wild Canterbury bells
	Phacelia ramosissima	Branching phacelia
	Plagiobothrys sp.	Popcornflower
	BRASSICACEAE	**MUSTARD FAMILY**
*	*Brassica nigra*	Black mustard
*	*Hirschfeldia incana (Brassica geniculata)*	Shortpod mustard
	Lepidium nitidum	Shining peppergrass
*	*Raphanus sativus*	Wild radish
*	*Sisymbrium irio*	London rocket
*	*Sisymbrium orientale*	Wild mustard, hare's ear cabbage
	Thysanocarpus curvipes	Lacepod
	CACTACEAE	**CACTUS FAMILY**
	Cylindropuntia californica var. *parkeri (Opuntia parryi)*	Valley cholla
	CHENOPODIACEAE	**GOOSEFOOT FAMILY**
*	*Chenopodium murale*	Nettle-leaved goosefoot, lamb's quarters
*	*Salsola tragus*	Russian thistle

	Scientific Name	Common Name
	CONVOLVULACEAE	**MORNING-GLORY FAMILY**
	Calystegia macrostegia	Morning-glory
	Cuscuta californica	Chaparral dodder, witch's hair
	CRASSULACEAE	**STONECROP FAMILY**
	Crassula connata (C. erecta)	Pygmy-weed, pygmy stonecrop
	CUCURBITACEAE	**GOURD FAMILY, CUCUMBER FAMILY**
	Cucurbita foetidissima	Calabazilla
	Marah macrocarpa	Chilicothe, wild cucumber
	EUPHORBIACEAE	**SPURGE FAMILY**
	Croton setiger (C. setigerus, Eremocarpus setiger, E. setigerus)	Turkey-mullein, doveweed
	Euphorbia albomarginata (Chamaesyce albomarginata)	Rattlesnake sandmat, rattlesnake weed
	FABACEAE	**LEGUME FAMILY, PEA FAMILY**
	Acmispon americanus (Lotus purshianus, L. unifoliatus)	"Spanish" clover
	Acmispon glaber (Lotus scoparius)	Deerweed
	Lupinus sp.	Unid. lupine
	Lupinus bicolor	Miniature lupine, dove lupine
*	*Medicago polymorpha*	California burclover
*	*Vicia villosa*	Winter vetch
	GERANIACEAE	**GERANIUM FAMILY**
*	*Erodium botrys*	Long-beak filaree
*	*Erodium cicutarium*	Redstem filaree
	LAMIACEAE	**MINT FAMILY**
*	*Marrubium vulgare*	Horehound
	Salvia apiana	White sage
	Salvia columbariae	Chia
	Salvia mellifera	Black sage
	Trichostema lanceolatum	Vinegar weed
	MALVACEAE	**MALLOW FAMILY**
*	*Malva parviflora*	Cheeseweed
	MYRSINACEAE	**MYRSINE FAMILY**
*	*Anagallis arvensis*	Scarlet pimpernel

	Scientific Name	Common Name
	MYRTACEAE	**MYRTLE FAMILY, EUCALYPTUS FAMILY**
*	*Eucalyptus* sp.	Ornamental eucalyptus
	NYCTAGINACEAE	**FOUR O'CLOCK FAMILY**
	Mirabilis laevis var. *crassifolia (M. californica)*	Wishbone bush
	ONAGRACEAE	**EVENING-PRIMROSE FAMILY**
	Camissonia sp.	Unid. evening-primrose
	Eulobus californica (Camissonia californica)	California false mustard, mustard evening primrose
	PAPAVERACEAE	**POPPY FAMILY**
	Eschscholzia californica	California poppy
	PHRYMACEAE	**LOPSEED FAMILY**
	Mimulus aurantiacus (M. puniceus, M. longiflorus)	Bush monkeyflower,sticky monkeyflower
	Mimulus guttatus	Seep monkeyflower
	PLANTAGINACEAE	**PLANTAIN FAMILY**
	Antirrhinum nuttallianum	Nuttall snapdragon, violet snapdragon
	Keckiella antirrhinoides	Yellow bush-penstemon
	Plantago erecta	California plantain
	POLEMONIACEAE	**PHLOX FAMILY**
	Eriastrum sapphirinum	Sapphire woollystar
	Navarretia hamata	Hooked navarretia
	POLYGONACEAE	**BUCKWHEAT FAMILY**
	Chorizanthe fimbriata	Fringed spineflower
**	*Chorizanthe polygonoides* var. *longispina*	Long-spined spineflower
	Eriogonum fasciculatum var. *foliolosum*	Leafy California wild buckwheat, interior California buckwheat
	Eriogonum fasciculatum var. *polifolium*	Mojave Desert California buckwheat
*	*Polygonum aviculare ssp. depressum (P. arenastrum)*	Common knotweed
*	*Rumex crispus*	Curly dock
	ROSACEAE	**ROSE FAMILY**
	Adenostoma fasciculatum	Chamise
	RUBIACEAE	**MADDER FAMILY, COFFEE FAMILY**
*?	*Galium aparine*	Goose grass, annual bedstraw

Scientific Name	Common Name
SALICACEAE	**WILLOW FAMILY**
Populus fremontii ssp. *fremontii*	Fremont cottonwood
Salix lasiolepis	Arroyo willow
SCROPHULARIACEAE	**FIGWORT FAMILY, SNAPDRAGON FAMILY**
Scrophularia californica	California figwort, coast figwort
SOLANACEAE	**NIGHTSHADE FAMILY**
Datura wrightii (D. meteloides)	Jimsonweed, tolguacha
* *Nicotiana glauca*	Tree tobacco
Solanum americanum	
*? *(S. nodiflorum)*	White nightshade
TAMARICACEAE	**TAMARISK FAMILY**
* *Tamarix species*	Tamarisk
URTICACEAE	**NETTLE FAMILY**
* *Urtica urens*	Dwarf nettle
ZYGOPHYLLACEAE	**CALTROP FAMILY**
* *Tribulus terrestris*	Puncture vine
Monocotyledons	
AGAVACEAE	**CENTURY PLANT FAMILY, AGAVE FAMILY**
Hesperoyucca whipplei (Yucca whipplei)	Chaparral yucca
LILIACEAE	**LILY FAMILY**
Calochortus splendens	Splendid mariposa lily
POACEAE	**GRASS FAMILY**
* *Avena barbata*	Slender wild oat
* *Avena fatua*	Wild oat
* *Bromus species*	Non-native brome
* *Bromus diandrus (B. rigidus)*	Ripgut brome
* *Bromus madritensis* ssp. *rubens (B. rubens)*	Red brome
* *Hordeum murinum*	Wall barley, hare barley
* *Lamarckia aurea*	Goldentop grass
* *Phalaris species*	Unid. canary grass
* *Schismus barbatus*	Mediterranean schismus
* *Triticum aestivum*	Common wheat (cultivated)

Scientific Name	**Common Name**
THEMIDACEAE	**BRODIAEA FAMILY**
Dichelostemma capitatum (D. pulchella, Brodiaea pulchella)	Blue dicks, wild hyacinth
Muilla maratima	Common muilla

* non-native species ** special status species

Wildlife [N=57]

	Scientific Name	**Common Name**
	VERTEBRATES	
	Reptiles	
	Iguanidae	Iguanid Lizards
	Sceloporus orcutti	Granite spiny lizard
	Uta stansburiana	Side-blotched lizard
	Phrynosomatidae	Spiny Lizards
**	*Phrynosoma blainvillii*	Coast horned lizard
	Teiidae	Whiptails and Relatives
**	*Aspidoscelis hyperythra*	Orange-throated whiptail
**	*Aspidoscelis tigris stejnegeri*	Coastal (western) whiptail
	Birds	
	Accipitridae	Hawks, Eagles, and Harriers
**	*Accipiter cooperii*	Cooper's hawk
	Buteo jamaicensis	Red-tailed hawk
**	*Circus cyaneus*	Northern harrier
**	*Elanus leucurus*	White-tailed kite
	Aegithalidae	Long-tailed Tits
	Psaltriparus minimus	Bushtit
	Alaudidae	Larks
**	*Eremophila alpestris actia*	California horned lark
	Apodidae	Swifts
	Aeronautes saxatalis	White-throated swift
	Ardeidae	Herons
**	*Ardea herodias*	Great blue heron (fly over)
	Cathartidae	Vultures
	Cathartes aura	Turkey vulture
	Charadriidae	Plovers
	Charadrius vociferus	Killdeer
	Columbidae	Pigeons and Doves
*	*Columba livia*	Rock dove, common pigeon
	Zenaida macroura	Mourning dove
	Corvidae	Crows and Jays
	Aphelocoma californica	California scrub jay
	Corvus brachyrhynchos	American crow

	Scientific Name	**Common Name**
	Corvus corax	Common raven
Cuculidae		Cuckoos
	Geococcyx californianus	Greater roadrunner
Emberizidae		Emberizine Sparrows
	Amphispiza belli	Sage sparrow
	Melospiza melodia	Song sparrow
	Pipilo crissalis senicula	California towhee
	Zonotrichia leucophrys	White-crowned sparrow
Falconidae		Falcons
	Falco sparverius	American kestrel
Fringillidae		Finches
	Carduelis psaltria	Lesser goldfinch
	Haemorhous (Carpodacus) mexicanus	House finch
Hirundinidae		Swallows
	Petrochelidon pyrrhonota tachina	Cliff swallow
	Stelgidopteryx serripennis	Northern rough-winged swallow
Icteridae		Icterids
	Agelaius phoeniceus	Red-winged blackbird
	Euphagus cyanocephalus	Brewer's blackbird
	Icterus bullockii	Bullock's oriole
	Sturnella neglecta	Western meadowlark
Mimidae		Mockingbirds
	Mimus polyglottos polyglottos	Northern mockingbird
	Toxostoma redivivum	California thrasher
Odontophoridae		Quail
	Callipepla californica californica	California quail
Parulidae		Wood Warblers
	Dendroica coronata	Yellow-rumped warbler
Picidae		Woodpeckers
	Colaptes auratus	Northern flicker
	Picoides nuttallii	Nuttall's woodpecker
Polioptilidae		Gnatcatchers
	Polioptila caerulea	Blue-gray gnatcatcher
**	*Polioptila californica californica*	Coastal California gnatcatcher
Strigidae		Owls
**	*Athene cunicularia*	Burrowing owl
Sturnidae		Starlings

	Scientific Name	**Common Name**
*	*Sturnus vulgaris*	European starling
	Timaliidae	Babblers
	Chamaea fasciata	Wrentit
	Trochilidae	Hummingbirds
	Calypte anna	Anna's hummingbird
**	*Calypte costae*	Costa's hummingbird
	Troglodytidae	Wrens
	Catherpes mexicanus	Canyon wren
	Thryomanes bewickii	Bewick's wren
	Turdidae	Thrushes
	Sialia mexicana	Western bluebird
	Tyrannidae	Tyrant Flycatchers
	Sayornis nigricans	Black phoebe
	Sayornis saya	Say's phoebe
	Tyrannus verticalis	Western kingbird
	Mammals	
	Canidae	Dogs, Foxes, and Coyotes
	Canis domesticus	Domestic dog
	Canis latrans	Coyote
	Geomyidae	Pocket Gophers
	Thomomys bottae	Botta's pocket gopher (sign)
	Leporidae	Rabbits
**	*Lepus californicus*	Black-tailed jackrabbit
	Sylvilagus audubonii	Audubon's cottontail
	Sciuridae	Squirrels
	Spermophilus beecheyi	California ground squirrel

BTJA=black-tailed jackrabbit, BUOW=burrowing owl, CAGN=coastal California gnatcatcher, CHL=coast horned lizard, CHPO=long-spined spineflower, GBHE=great blue heron, HOLA=California horned lark, WTKI=white-tailed kite.

S=several, no exact count. Observations may or may not represent the same individuals observed on a different survey date.

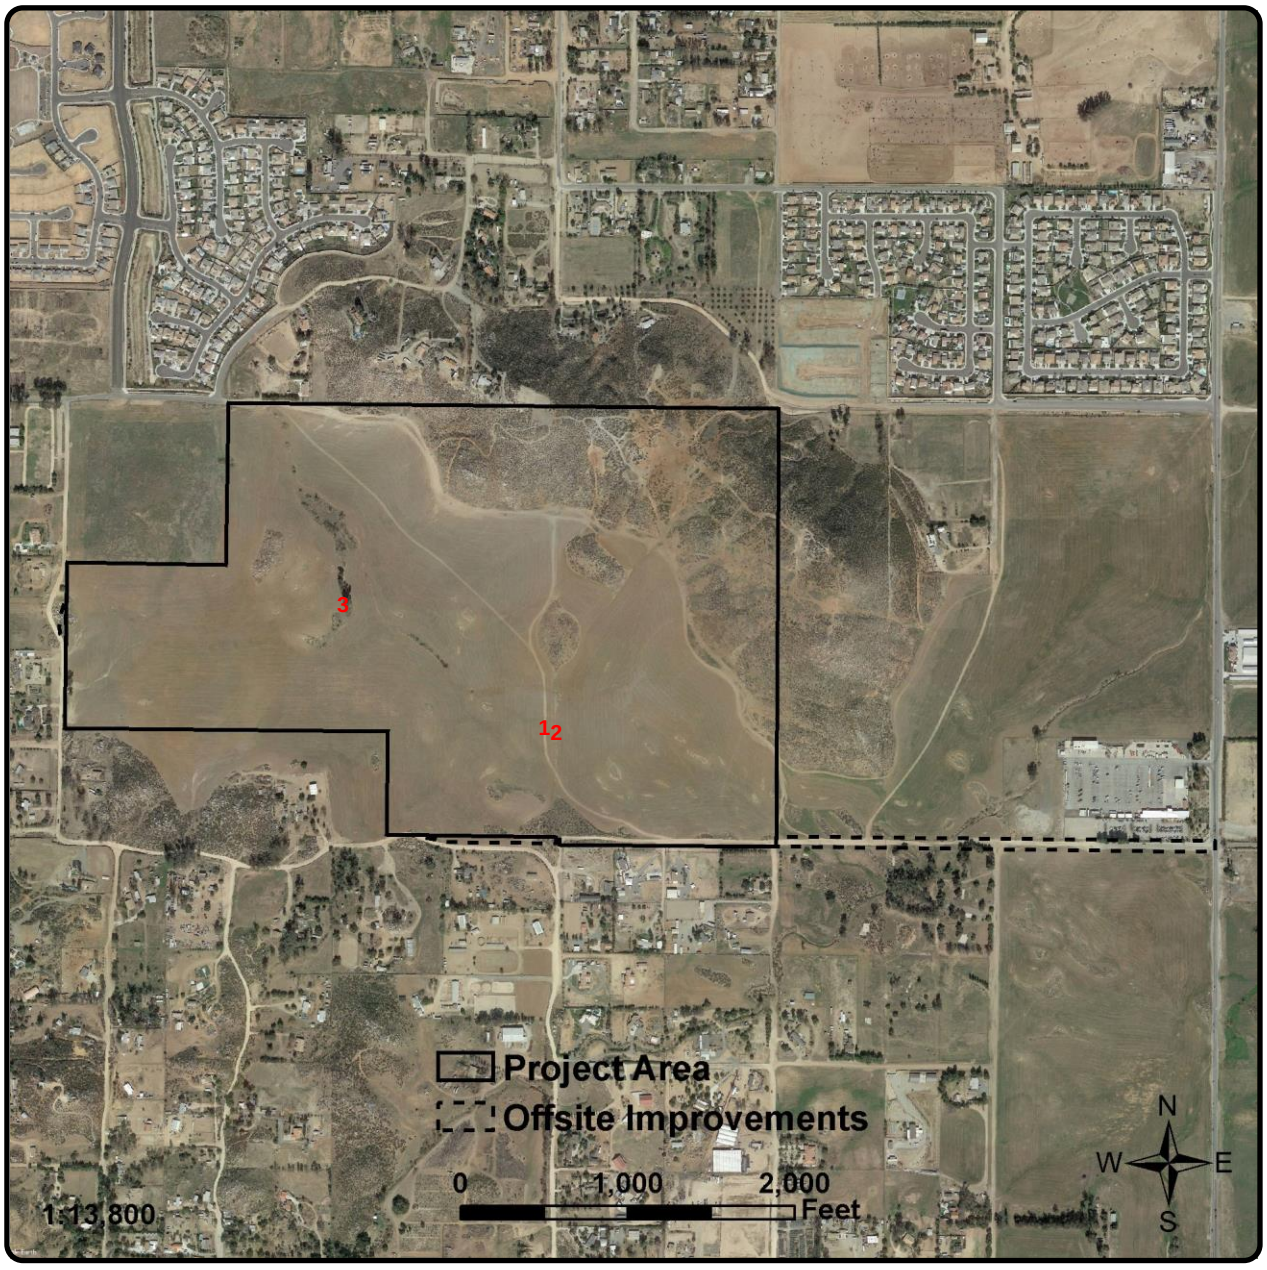
*CAGN was also detected in the same approximate areas on 04.08.17, 04.25.17, and 05.06.17. These are likely the same individuals previously detected in the area.

**BTJA was also detected in the same approximate areas on 04.08.17 and 05.06.17; number of individuals was not determined.

Other species observed during previous surveys are Cooper's hawk (2007), northern harrier (2011, 2013), and Costa's hummingbird (2011); details of these observations are not available.

Details of observations prior to 2011 are not available.

APPENDIX B: Site Photographs



(1) Burrowing owl observed on the site (May 30, 2018)

(2) Burrowing owl burrow site (June 14, 2018).

(3) Potential raptor nest in eucalyptus tree (June 14, 2018).

Species of concern shall be any unique, rare, endangered, or threatened species. It shall include species used to delineate wetlands and riparian corridors. It shall also include any hosts, perching, or food plants used by any animals listed as rare, endangered, threatened, or candidate species by either state, or federal regulations, or for Riverside County as listed by the California Department of Fish and Wildlife Natural Diversity Data Base (CNDDB).

I declare under penalty of perjury that the information provided on this summary sheet is in accordance with the information provided in the biological report or habitat assessment.

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources
(Submit two copies to the County)

Case Number: TR 31194 Lot/Parcel No. _____ EA Number _____

Assessor's Parcel Number(s): 360-300-002, -003, -004, -005, -006, -009, 360-350-001

Date: October 9, 2018

Biological Resources: (Check the level of impact that applies to the following questions.)

Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

a) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

☐ ■ ☐ ☐

b) Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)?

☐ ■ ☐ ☐

c) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, or U. S. Wildlife Service?

☐ ■ ☐ ☐

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ■ ☐ ☐

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources
(Submit two copies to the County)

e) Have a substantial adverse effect on any riparian habitat, or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or the U.S. Fish and Wildlife Service?

☐ ■ ☐ ☐

f) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pools, coastal, etc.) through direct removal, filling, hydrological interruption)

☐ ■ ☐ ☐

g) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

☐ ■ ☐ ☐

Findings of Fact:

A mapped blue-line stream is present onsite and is associated with riparian/riverine vegetation.

One (1) special status plant species and nine (9) special status wildlife species have been identified onsite during past and present surveys (long-spined spineflower, coastal California gnatcatcher, Cooper's hawk, white-tailed kite, California horned lark, great blue heron, northern harrier, Costa's hummingbird, black-tailed jackrabbit, and coast horned lizard).

Potential nesting habitat for burrowing owl and other bird species is present onsite. One (1) burrowing owl was identified onsite along with one (1) active burrow. One (1) inactive potential raptor nest is present onsite. There is no evidence of nesting by white-tailed kite.

Proposed Mitigation:

Avoidance and/or onsite or offsite restoration of riparian habitat is recommended. Preconstruction surveys for burrowing owl and other nesting bird species are recommended prior to disturbance of the site.

A winter focused survey for burrowing owl is recommended as well as preparation of a Burrowing Owl Exclusion Plan if the owl is a resident.

Monitoring Recommended:

None.

Report Summary:

No burrowing owls, owl sign, or active burrows were observed onsite in 2019. One (1) burrowing owl and one (1) potentially occupied burrow were observed in 2018. Tall, dense growth of non-native vegetation was present across the site in 2019, covering the burrow site and creating unsuitable conditions for burrowing owl. If future farming activities remove this vegetation, potentially suitable habitat may be present on the site again. A preconstruction burrowing owl survey is recommended. Habitat suitable for nesting birds (including raptors) is present within and around the site and a preconstruction nesting bird survey is recommended. Previous surveys identified one (1) listed species (coastal California gnatcatcher) and several special status species onsite, including white-tailed kite, northern harrier, coast horned lizard, coastal (western) whiptail, orange-throated whiptail, San Diego black-tailed jackrabbit, Cooper's hawk, California horned lark, great blue heron, Costa's hummingbird, and long-spined spineflower. There is no evidence of white-tailed kite nesting on the project site. Jurisdictional riparian/riverine areas were previously identified on the project site. Regulatory permits will be required for impacts to jurisdictional areas. No vernal pools or areas of potential habitat for fairy shrimp were observed or are present onsite.

Surveys Conducted By: Guy Bruyea

Surveys Conducted: April through June 2019

Report Date: July 2019

MANAGEMENT SUMMARY

L&L Environmental, Inc. (L&L) conducted breeding season burrowing owl surveys on Richland Communities' ±207-acre project (and associated offsite improvement areas) in the City of Menifee, California. The purpose of this work effort was to re-examine the subject property to determine presence/absence of burrowing owl.

L&L has performed studies on this property for over a decade (beginning in 2003) under a number of contractors and proponents. This study reflects the most current field conditions and, where pertinent, makes comparative statements as to past and historic conditions.

Land use varies within and adjacent to the survey area and includes anthropogenic disturbances such as rural residential areas, active and fallow agricultural areas, unimproved roads, powerline easements, off-road vehicle activity, debris piles, and windblown debris. Two (2) roads are present on the property. One (1) is located along the northern and eastern portion of the property where agricultural areas meet less disturbed sage scrub areas. This unimproved road begins at the eastern terminus of Daniel Road and exits at the southeastern corner of the site near the intersection of Evans Road and Ascot Way. Krubsack Road (unimproved) trends north to south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north.

The site consists of agricultural fields and a mix of disturbed to relatively undisturbed buckwheat scrub and chamise chaparral vegetation communities. The agricultural fields are dry farmed for wheat. The site has also been used for sheep grazing in the past, but no grazing was observed during the current survey.

A shallow drainage and mapped blue-line stream is present onsite (trending from south to north within the central portion of the site), as well as various other jurisdictional features. No vernal pools or areas of potential habitat for fairy shrimp were observed or are present onsite.

Based upon presence of relatively flat open areas with low-growing vegetation on large portions of the site, close proximity to a fresh water source, and recent records of burrowing owl in the vicinity, habitat suitable for use by burrowing owl was determined to be present on much of the subject property. There were no burrowing owl observations during biological surveys of the site in 2003, 2004, 2005, 2006, and 2011. L&L conducted focused late-season surveys on the site and surrounding buffer areas in August 2013 with negative results. However, one (1) location was noted that may have been used in the recent past, based upon presence of a

single feather found at an entrance to a hole beneath a grouping of medium-sized rocks. There was a rock immediately adjacent to the entrance that was evidently used for avian perching (species undetermined) based on the presence of droppings, but no other sign, including additional feathers, scat, prey bones, tracks, or other indicators were found at the location.

Focused surveys for burrowing owl were not conducted in 2017, but general surveys included searches for burrowing owl and active burrows. No burrowing owl, occupied burrows, or burrowing owl sign were observed. Surveys in 2018 observed one (1) burrowing owl and one (1) active burrow and potential nesting site. The owl was observed during the survey on May 30, but was not observed during subsequent surveys. No burrowing owl, owl sign, or active burrows were observed in 2019. Tall, dense growth of non-native vegetation was present in the agricultural fields in 2019, covering the burrow site and creating unsuitable conditions for burrowing owl. If future farming activities remove this vegetation, potentially suitable habitat may be present on the site again. A preconstruction clearance survey for burrowing owl (valid for 30 days) will be required.

A white-tailed kite was observed flying over the site during a survey in 2011 but has not been observed subsequently. The California Natural Diversity Database (CNDDB) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the project site (CDFW 2018c). There are several large eucalyptus trees on and adjacent to the site that may be suitable for raptor nesting. There is a raptor nest onsite in a large eucalyptus tree and it may have been used by red-tailed hawk in the past, but it was not observed to be active in 2017, 2018, or 2019. No white-tailed kite nesting has been observed onsite.

Habitat suitable for nesting birds is present within and around the site and a preconstruction survey for nesting birds should be conducted prior to any site disturbance during the nesting season (generally February 1 through August 31). If nesting birds are present, avoidance of nest sites will be required and a buffer of 300 to 500 feet is recommended until juvenile birds have fledged and/or an authorized biologist has verified that the nest is no longer active.

Previous surveys identified one (1) federally listed species (coastal California gnatcatcher) and several special status species onsite, including white-tailed kite, northern harrier, coast horned lizard, San Diego black-tailed jackrabbit, Cooper's hawk, California horned lark, great blue heron, Costa's hummingbird, and long-spined spineflower. Coastal California gnatcatcher and California horned lark were detected on the site in 2019.

1.0) INTRODUCTION

The following report was prepared by L&L Environmental, Inc. (L&L) for Richland Communities. It describes the results of biological surveys conducted on a proposed development located on lands within the City of Menifee. The project site consists of APNs 360-300-002, -003, -004, -005, -006, -009, and 360-350-001 (totaling ±207 acres) and portions of offsite APNs 360-180-009, 360-300-001, -008, 360-350-019, -022, -023, -024, 360-360-009, -010, -011, and 360-380-004 where improvements are planned.

Our assessment consisted of (1) a records search and literature review, conducted to determine the species of concern in the project area and proximity to closest documented special status species observations, and (2) field reconnaissance to identify presence/absence of habitat and species of concern (particularly burrowing owl).

1.1) Location

The site is located in the Paloma Valley west of Interstate Highway 215 (I-215), south of Newport Road, and east of Murrieta Road (Figure 1). The site is located between Wickerd Road to the south and Garbani Road to the north. The project site is situated in Sections 15 and 16, Township 6 South, Range 3 West, within the USGS Romoland 7.5' series quadrangle map (Figure 2).

The site is generally bounded as follows: to the west by a mixture of actively cultivated and fallow agricultural areas, Evans Road (unimproved), and rural residential units; to the east by a mixture of disturbed and relatively undisturbed open space, Ascot Way (unimproved), and a Verizon Communications complex beyond; to the north by a mixture of disturbed and relatively undisturbed lands, rural residential areas, Garbani Road (unimproved), and a housing development beyond; and to the south by Wickerd Road (unimproved), rural residential areas, and a mix of disturbed and relatively undisturbed lands beyond (Figure 3).

In addition to surveys conducted on the main site, offsite improvement areas were included in these surveys. These included two (2) separate areas: 1) a 0.5 mile section of Wickerd Road between the southeast corner of the main site east to Haun Road and 2) an area south of the south-central portion of the main site boundary roughly located between the intersection of Wickerd Road and Bradley Road and west to approximately Krubsack Road.

1.2) Vegetation and Setting

Much of the subject property has been disturbed in association with previous dry-land farming and sheep grazing. As a result, these areas do not support native habitat communities. In the historically less disturbed areas of the property, remnants of California buckwheat scrub and chamise chaparral vegetation are present. Two (2) unimproved roads are present onsite.

A shallow drainage feature and mapped blue-line stream is present trending from the southwest/central to the northwest portion of the site. Much of this area has been impacted by agricultural activities and invasive plants, but several woody riparian species are present in association with this feature.

Land uses adjacent to the survey area include rural residential, agricultural, large animal husbandry, unimproved roads, powerline easements, off-road vehicle activity, storage, and debris piles. An unimproved road begins at the eastern terminus of Daniel Road and exits at the southeastern corner of the site near the Evans Road and Ascot Way intersection. Krubsack Road (unimproved) runs north-south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north.

The agricultural fields are dry farmed for wheat. During 2019, the fields were densely vegetated with non-native species including short-pod mustard (*Hirschfeldia incana*), wild radish (*Raphinus sativus*), and other non-native annuals. Some native species, such as large flower rancher's fiddleneck (*Amsinckia intermedia*), were also present. The site has also been used for sheep grazing in the past, but no grazing was observed during the present survey.

1.3) Soils and Topography

Soils on the project site were mapped by the Natural Resources Conservation Service (2018) as a mixture of several soil types, including Wyman loam (WyC2), Vallecitos loam (VeC2), Porterville clay (PsC), Yokohl loam (YbC and YbE3), Cajalco fine sandy loam (CaC2 and CaD2), Cajalco rocky fine sandy loam (CbF2), Honcut sandy loam (HnC and HnD2), Las Posas loam (LaD2), and Las Posas rocky loam (LkD2 and LkF3) (Figure 4). The most common soils mapped for the subject property are Wyman loam on the central and western portion of the site (in farmed areas) and Las Posas rocky loams on densely vegetated hillsides within the northern and eastern portions of the site. Clay soils are relatively uncommon on the site, but Porterville clay is present near the southeastern portion of the property within the agricultural areas. Soils

observed onsite range from mostly sandy-loamy within the farmed areas to rocky loamy on the less disturbed vegetated hillsides. Cryptobiotic crusts are present, but only within less disturbed portions of the site away from previously farmed areas.

Topographically, much of the site is primarily flat and contains open lands with low-relief rocky outcrops and shallow depressions. Gently to steeply sloping hills and ridgelines are present within the northeastern portion of the property. The site has a combined maximum vertical relief of roughly 220 feet between highest and lowest points on the property, with elevation ranging from approximately 1,500 to 1,720 feet above mean sea level (AMSL).

Surrounding topographic features in the project vicinity include gently to steeply sloping hills and ridgelines interspersed with lower-lying relatively flat areas. Although most surrounding areas of the Paloma Valley are primarily flat, significant topographic features are present northwest and southwest of the property at elevations of approximately 1,760 to 1,820 feet AMSL. Bell Mountain, a significant topographic feature located approximately two (2) miles east of the subject property, rises to 1,848 feet AMSL.

2.0) REGULATORY ENVIRONMENT

2.1) Federal

2.1.1) Federal Endangered Species Act

By law, it is a requirement of the federal Endangered Species Act (FESA), 1973 (as amended) at Section 7(a)(2) that federal agencies ensure that any action authorized, funded, or carried out by a federal agency is not likely to jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of critical habitat. In order to comply with this requirement, the federal agency must conduct a Biological Assessment (BA), in which effects to listed species are analyzed and disclosed in the form of an "effects determination."

Section 7 requires federal agencies to consult with the U. S. Fish and Wildlife Service (USFWS) should it be determined that their actions may affect federally listed threatened or endangered species. Section 9 of FESA prohibits "take" (e.g., harm, harassment, pursuit, injury, kill) of federally listed wildlife. "Harm" is further defined to include habitat modification or degradation where it kills or injures wildlife by impairing essential behavioral patterns such including breeding, feeding, or sheltering. Take that is incidental to otherwise lawful activities can be authorized under Section 7 of FESA.

Procedures for obtaining a permit for incidental take are identified under Section 7 of FESA for federal properties or where federal actions are involved and are identified under Section 10 of FESA for non-federal actions. During the Section 7 process, measures to avoid and minimize project effects to listed species and their habitat will be identified and incorporated into a Biological Opinion (prepared by the USFWS) that includes an incidental take by the federal agency and applicant.

The County of Riverside has been issued a Section 10(a) permit for the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), discussed below.

2.1.2) Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711) is an international treaty that makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 CFR Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Executive Order 13186 ensures that

environmental analyses of federal actions required by the National Environmental Policy Act (NEPA) or other established environmental review processes evaluate the effects of actions on migratory birds, with emphasis on species of concern. Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young) or loss of habitat upon which the birds depend could be considered "take" and constitute a violation of the MBTA.

2.2) State

2.2.1) California Endangered Species Act

California Endangered Species Act (CESA) definitions of endangered and threatened species parallel those defined in the FESA. The CESA defines an endangered species as ". . . a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes including loss of habitat, change in habitat, overexploitation, predation, competition or disease." Endangered species are in serious danger of becoming extinct and threatened species are likely to become endangered species in the foreseeable future (according to Sections 2062 and 2067, respectively, of the California Fish and Game Code). Candidate species are those under formal review by the CDFW for listing as endangered or threatened (Section 2067). Prior to being considered for protected status, the CDFW designates a species as being of special concern. Species of Special Concern are wildlife species for which the CDFW has information indicating population decline. Plant species of concern are designated by California Rare Plant Ranks.

2.2.2) California Natural Diversity Database

The California Natural Diversity Database (CNDDB) includes documented occurrences of special status species that have been reported to the CDFW. It also includes ranks of overall condition of sensitive species and vegetation communities on global (throughout its range) and state (within California) levels. State ranking is numerical, ranging from one to five (S1 to S5), with one indicating very few remaining individuals or little remaining habitat and five indicating a demonstrably secure to ineradicable population condition.

2.2.3) California Rare Plant Ranks

The California Native Plant Society (CNPS) Inventory of Rare and Endangered Species includes documented occurrences of special status plant species that are available through the

Consortium of California Herbaria and other sources. The CNPS, in coordination with CDFW, has cataloged California's rare and endangered plants into lists according to population distributions and viability. These lists are numbered and indicate the following California Rare Plant Ranks (CRPR): (1A) presumed extinct in California; (1B) rare, threatened, or endangered throughout their range; (2A) presumed extirpated in California, but more common in other states; (2B) threatened or endangered in California, but more common in other states; (3) more information is needed to establish rarity; and (4) plants of limited distribution in California (i.e., naturally rare in the wild), but whose populations do not appear to be susceptible to threat. A CRPR may also have an extension (e.g., 1B.x) that indicates current level of threat: seriously threatened (x.1), moderately threatened (x.2), or not very threatened (x.3).

2.2.4) California Environmental Quality Act

The California Environmental Quality Act (CEQA) and CEQA Guidelines (§ 15000 et seq.) require identification of environmental effects from discretionary projects. Significant effects are to be mitigated by avoidance, minimization, rectification, or compensation whenever possible.

Effects to all state and federal listed species are considered significant under CEQA. In addition to formally listed species, CEQA considers effects to species that are demonstrably endangered or rare as important or significant. These definitions can include state designated species of special concern, federal candidate and proposed species, CNDDB tracked species, and CRPR list 1B and list 2 plants.

Appendix G of the CEQA Guidelines specifically addresses biological resources and encompasses a broad range of resources to be considered.

2.2.5) California Fish and Game Code, Sections 3503 and 3513

California Fish and Game Code Section 3503 prohibits take, possession, or needless destruction of bird nests or eggs except as otherwise provided by the Code; Section 3503.5 prohibits take or possession of birds of prey or their eggs except as otherwise provided by the Code; and Section 3513 provides for the adoption of the provisions of the federal Migratory Bird Treaty Act.

2.3) Local

2.3.1) Western Riverside County Multiple Species Habitat Conservation Plan

The County of Riverside, including eight (8) additional land jurisdictions and 14 cities, have prepared a Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County. The MSHCP will build upon existing preserves and provide connectivity and wildlife corridors throughout the region. The MSHCP proposes to conserve approximately 500,000 acres and 146 different species. Approximately 347,000 acres are anticipated to be conserved on existing Public/Quasi-Public lands with additional contributions of approximately 153,000 acres from willing sellers (http://www.rcip.org).

The MSHCP was approved by the county on June 17, 2003 and an Implementation Agreement (IA) between the USFWS, the CDFW, and the County was executed and an associated USFWS Section 10(a)(1)(B) Permit (No. TE-088609) was issued on June 22, 2004. The permit grants take authorization for certain species identified in the permit as "Covered Species Adequately Conserved."

The MSHCP establishes seven (7) core reserve areas and associated linkages between proposed and existing core areas. The MSHCP divides areas into Cells using USGS coordinates. According to the Riverside County Integrated Project website, parcels that compose the current project site are located within Sun City/Menifee Valley Area Plan. Conservation efforts for the project site will be evaluated with regard to sensitive species identified as not adequately conserved and observed onsite, riverine/riparian or vernal pool habitat and their associated sensitive species (if located onsite), fairy shrimp, jurisdictional areas, and sage scrub.

Focused surveys are required for species identified as not adequately conserved under the MSHCP if suitable habitat is present onsite. If focused surveys are determined necessary and species identified as not adequately conserved under the MSHCP occur onsite, the proponent may be required to undergo a Habitat Acquisition and Negotiation Strategy (HANS) determination with the County of Riverside. If a single family home or mobile home is to be placed on an existing legal lot, permitting will be reviewed according to the procedures outlined in MSHCP Section 6.1.1, *Expedited Review Process for Single-Family Homes or Mobile Homes To Be Located on an Existing Lot Within the Criteria Area*.

Section B (Species Accounts) of Volume 2 of the MSHCP (Dudek 2003) lists the following objectives for burrowing owl conservation/protection:

Objective 1

Include within the MSHCP Conservation Area at least 27,470 acres of suitable primary habitat for the burrowing owl including grasslands.

Objective 2

Include within the MSHCP Conservation Area at least 5 Core Areas and interconnecting linkages. Core areas may include the following: (1) Lake Skinner/Diamond Valley Lake area (Existing Core C plus Proposed Extension of Existing Cores 5, 6, 7; 29,060 acres); (2) playa west of Hemet (Proposed Noncontiguous Habitat Block 7; 1,250 acres); (3) San Jacinto Wildlife Area/Mystic Lake area including Lake Perris area (Existing Core H; 17,470 acres); (4) Lake Mathews (Existing Core C plus Proposed Extension of Existing Cores 2; 23,710 acres); and (5) along the Santa Ana River (9,670 acres). The Core Areas should support a combined total breeding population of approximately 120 burrowing owls with no fewer than five pairs in any one Core area.

Objective 3

Include within the MSHCP Conservation Area at least 22,120 acres of suitable secondary habitat for the burrowing owl including playas and vernal pools, and agriculture outside of the Core Areas identified above. Areas where additional suitable habitat could be conserved include west of the Jurupa Mountains, near Temescal Wash (i.e., vicinity of Alberhill), near Temecula Creek, within the Lakeview Mountains, Banning, the Badlands, Gavilan Hills, and Quail Valley.

Objective 4

Include within the MSHCP Conservation Area the known nesting locations of the burrowing owl at Lake Perris, Mystic Lake/San Jacinto Wildlife area, Lake Skinner area, the area around Diamond Valley Lake, playa west of Hemet, Lakeview Mountains, Lake Mathews/Estelle Mountain Reserve and Sycamore Canyon Regional Park.

Objective 5

Surveys for burrowing owl will be conducted as part of the project review process for public and private projects within the burrowing owl survey area where suitable habitat is present (see Burrowing Owl Survey Area Map, Figure 6-4 of the MSHCP, Volume I). The locations of this species determined as a result of survey efforts shall be conserved in accordance with procedures described within Section 6.3.2, MSHCP, Volume I and the guidance provided below:

Burrowing owl surveys shall be conducted utilizing accepted protocols as follows. If burrowing owls are detected on the project site then the action(s) taken will be as follows:

If the site is within the Criteria Area, then at least 90 percent of the area with long-term conservation value will be included in the MSHCP Conservation Area. Otherwise:

1) If the site contains, or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and the

surrounding area supports fewer than 3 pairs of burrowing owls, then the on-site burrowing owls will be passively or actively relocated following accepted protocols.

2) If the site (including adjacent areas) supports three or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite.

The survey and conservation requirements stated in this objective will be eliminated when it is demonstrated that Objectives 1 – 4 have been met.

Objective 6

Pre-construction presence/absence surveys for burrowing owl within the survey area where suitable habitat is present will be conducted for all Covered Activities through the life of the permit. Surveys will be conducted within 30 days prior to disturbance. Take of active nests will be avoided. Passive relocation (use of one-way doors and collapse of burrows) will occur when owls are present outside the nesting season.

Objective 7

Translocation sites for the burrowing owl will be created in the MSHCP Conservation Area for the establishment of new colonies. Translocation sites will be identified, taking into consideration unoccupied habitat areas, presence of burrowing mammals to provide suitable burrow sites, existing colonies and effects to other Covered Species. Reserve Managers will consult with the Wildlife Agencies regarding site selection prior to translocation site development.

3.0) METHODS AND PERSONNEL

3.1) Literature Review

Pertinent literature was reviewed to identify local occurrences and habitat requirements of special status species and communities occurring in the region. Literature reviewed included compendia provided by resource agencies (CDFW 2019a, 2019b; USFWS 2019), the Western Riverside County MSHCP (Dudek 2003), California Natural Diversity Database (CNDDB; CDFW 2019c) reports for the vicinity, and reports of previous surveys completed for the site (L&L 2003-2018).

Latin names of plants follow *The Jepson Manual* (Hickman 1993) with updates from the online Jepson eFlora (Jepson 2019). Latin names of animals follow *A Field Guide to Western Reptiles and Amphibians* (Stebbins 1985), *California Mammals* (Jameson and Peeters 1988), *Checklist of North American Birds* (American Ornithologists' Union 1983, 1989) and *The Sibley Guide to Birds* (Sibley 2000), and *American Insects: A Handbook of the Insects of America North of Mexico* (Arnett 2000). Vegetation community classifications follow Sawyer et al. (2009). Current conservation status of plant and wildlife species determined from CDFW (2019a, 2019b). Other sources consulted for information regarding biological resources include Brown (1994), Recon (1985), Schoenherr (1990), and Small (1994).

3.2) Survey Methods

A habitat assessment, burrow survey, and focused burrowing owl surveys were conducted on five (5) site visits in April, May, and June 2019 (Table 1). The surveys were conducted in accordance with the Burrowing Owl Survey Instructions for the MSHCP.

MSHCP Burrowing Owl Survey Instructions require surveys to be conducted during the breeding season from March 1 to August 31. Surveys should be conducted during weather conditions that are conducive to detecting owls and owl sign. Surveys are not acceptable if they are conducted during rain, high winds (> 20 mph), dense fog, or temperatures over 90° F.

Surveys should be conducted in the morning one (1) hour before sunrise to two (2) hours after sunrise or in the early evening two (2) hours before sunset to one (1) hour after sunset. Surveys were generally conducted in the early morning hours.

Surveys were conducted by L&L field biologist Guy Bruyea, who has extensive experience with surveys for burrowing owl and nesting birds. Weather conditions during the surveys are summarized in Table 1.

Table 1. Survey Information.

Date	Time	Sunrise*	Sunset*	Weather	Wind (mph)
04.16.2019	1630-1900	--	1925	Cloudy, 66-63º F	2-4
05.15.2019	1700-1930	--	1947	Cloudy, 74-69º F	1-4
05.28.2019	1630-1930	--	1956	Sunny/Clear, 72-68º F	1-5
06.21.2019	0700-0830	0542	--	Marine layer/Clear, 61-67º F	0-1
06.23.2019	1815-1930	--	2007	Clear, 77-71º F	0-1

*sunrise/sunset times from timeanddate.com

A total of about 10.75 person-hours were spent onsite. The site was examined for suitable burrow sites and for signs of occupation by burrowing owl, including pellets, feathers, whitewash, prey remains, and eggshell fragments, as well as individual owls. Particular attention was paid to the location of the potentially occupied burrow observed in 2018.

A search for potentially suitable burrows within dirt, wood, and rock debris piles, artificially created berms, and other locations was conducted during the surveys. The surveys were concentrated in areas typically associated with burrowing owl habitat, including open areas onsite and areas where California ground squirrel activity (i.e., suitable burrows) was expected. An additional 150-meter (500-foot) buffer area surrounding the site was visually inspected, where possible, in areas identified as potential burrowing owl habitat. Any developed areas were visually surveyed with binoculars due to trespassing concerns on private property.

Transects were walked throughout the property where suitable habitat is present. Coupled with binocular surveys of any restricted areas, this allowed for complete visual ground coverage of the survey area. Distance between transects was approximately 15 to 20 meters.

3.3) Species Information

3.3.1) Burrowing Owl

Burrowing owl (*Athene cunicularia*) is protected under the federal Migratory Bird Treaty Act and California Fish and Game Code and is a CDFW Species of Special Concern. Under the MSHCP, surveys are required in certain areas and mitigation is required as described in Section 2.3, above.

Burrowing owl is a small, ground-dwelling owl found in open dry grassland, desert, or shrubland areas and in uncultivated agricultural areas, rangelands, and other open areas with low-growing vegetation. It ranges throughout the western U. S., Canada, and Mexico. It is a small (approximately 9 to 11 inches in height) pale brown owl with white-colored "eyebrows" and throat, yellow eyes, a short stubby tail, and long legs. Males are generally larger and more lightly colored than females. Burrowing owl is the most diurnal of owl species but is considered mostly crepuscular (active around sunrise and sunset). Arthropods (mainly beetles and grasshoppers) make up a large portion of their diet, especially during the breeding season. Burrowing owls are opportunistic feeders and will readily eat small mammals (primarily mice, gophers, and ground squirrels), lizards, amphibians, and small birds.

Burrows are an essential element of burrowing owl habitat. Although burrowing owls can excavate their own burrows in soft soils, they typically inhabit abandoned burrows of small burrowing mammals, such as ground squirrels and pocket gophers. Burrowing owl has also been known to use man-made structures such as cement culverts, debris piles, and other artificial burrows. Occupancy of burrowing owl habitat can be verified at a site by observation of at least one (1) owl or its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance (CBOC 1993).

A site is considered occupied if at least one (1) owl has been identified onsite in the past three (3) years, because (if undisturbed) burrowing owls "exhibit high site fidelity, reusing burrows year after year" (Rich 1984, Feeny 1992). The range of this species is throughout the western United States and Mexico, but it is increasingly uncommon in southern California.

4.0) RESULTS

4.1) Literature Review Results

The project site is within the area covered by the Western Riverside County MSHCP. The MSHCP Conservation Summary Report identified the site as requiring an assessment of potential habitat and presence/absence of burrowing owl. This and previous reports fulfill the MSHCP requirement of habitat assessment and presence/absence surveys for burrowing owl. Figure 5 shows the project site in relation to MSHCP core areas and linkages.

The 2006 Final Environmental Impact Report (EIR) for the project (T&B 2006) includes a mitigation measure (4.3-2) requiring a pre-construction survey for burrowing owl within 30 days prior to grading. If burrowing owl is present, mitigation is required per the MSHCP:

> If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.
>
> If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

4.2) Vegetation Communities

Much of the subject property has been disturbed by recent and historic cultivation and sheep grazing and does not support native habitat. The agricultural fields are dry farmed for wheat. During 2019, the fields were densely vegetated with non-native species including short-pod mustard, wild radish, and other non-native annuals. Some native species, such as large flower rancher's fiddleneck, were also present.

Less disturbed areas are also present, primarily in the northeastern portions of the site, with a mixture of disturbed and relatively undisturbed California buckwheat scrub and chamise chaparral. Sparse riparian vegetation and trees are found along the blue-line stream in the northwestern/central portion of the site (Figure 6).

Evidence of widespread sheep grazing was observed throughout all areas of the site in 2013. Hillsides containing California buckwheat scrub along the farmland edges, especially to the north and east, had been severely damaged by sheep grazing. Very few annuals remained (none in some areas) and many of the perennials have been stripped of vegetation and/or trampled. No evidence of recent sheep grazing was observed during surveys in 2017, 2018, and 2019 and regrowth of native annuals and perennials was observed in the buckwheat scrub areas.

Relatively undisturbed California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance) is present on the eastern and northern (primarily northeastern) portion of the site on south, west, and east-facing slopes containing numerous rocky outcrops. Native shrubs and other conspicuous plants commonly observed in these areas include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), white sage (*Salvia apiana*), brittlebush (*Encelia farinosa*), yellow bush penstemon (*Keckiella antirrhinoides*), wishbone bush (*Mirabilis laevis* var. *crassifolia*), sweetbush (*Bebbia juncea*), blue elderberry (*Sambucus nigra* ssp. *cerulea*), and black sage (*Salvia mellifera*). Approximately 44.2 acres of California buckwheat scrub is present onsite and an additional ±0.6 acre is located within offsite improvement areas. Open patches can be found throughout portions of the buckwheat scrub onsite containing a mixture of native and non-native annuals. This vegetation community is ranked by CDFW (2018d) as S5 (secure – common, widespread, and abundant) and it is not considered sensitive.

Chamise chaparral (*Adenostema fasciculatum* Shrubland Alliance) or chamise–black sage chaparral (*Adenostema fasciculatum–Salvia mellifera* Shrubland Alliance) is found mainly in

small patches of remnant habitat, excluding the east-central property boundary where some relatively dense stands remain and mix with California buckwheat scrub. Common species found in the chaparral areas onsite are chamise (*Adenostoma fasciculatum*), black sage, and other perennials. Approximately ±2.1 acres of chaparral are present onsite, with an additional ±0.6 acre located within offsite improvement areas. CDFW ranks these chaparral communities as S5 and they are not considered sensitive.

Arroyo willow thickets (*Salix lasiolepis* Shrubland Alliance) and mulefat thickets (*Baccharis salicifolia* Shrubland Alliance) are present along a degraded blue-line stream in the northwestern/central portions of the site. This area is sparsely inhabited by arroyo willow (*Salix lasiolepis*), mulefat (*Baccharis salicifolia*), or a combination of these species. A single Fremont cottonwood tree (*Populus fremontii* ssp. *fremontii*) and scattered non-native tamarisks (*Tamarix* species) were also observed. The understory is dominated by mostly weedy annuals. Approximately 2.3 acres of this habitat is present onsite. CDFW ranks both of these communities as S4 (apparently secure – uncommon but not rare, some cause for long-term concern due to declines or other factors) and they are not considered sensitive.

Approximately 75 percent of the site is composed of agricultural areas under cultivation for wheat. During 2019 surveys, there was no crop evident and the fields were thickly vegetated with mainly non-native plants such as short-pod mustard and wild radish. Disturbed habitat on the site includes unvegetated areas (such as roads) and areas that contain mostly non-native plant species, including ornamentals and ruderal invasive species. There are ±158.5 acres of disturbed and/or agricultural land onsite, with an additional ±2.5 acres within offsite improvement areas.

4.3) Plant Species

Under the MSHCP, no surveys or assessments were required for Narrow Endemic, Criteria Area, or additional needs botanical species on the project site. The site does not support habitat, soils, and/or vegetation associated with naturally occurring vernal pools and would therefore not support associated special status plant species, nor were these species observed.

One (1) special status plant species was observed onsite in 2017, long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*; CRPR 1B.2). Two (2) plants were observed on clay soils in the northeast portion of the site along an east-west ridgeline. Under the MSHCP, this species is considered to be adequately conserved.

A list of all plant species identified onsite during past and present surveys is included in Appendix A.

4.4) Wildlife Species

A combined total of 59 wildlife species have been detected during all biological surveys of the site by L&L. A list of all wildlife species identified onsite is provided in Appendix A.

Biological surveys conducted on the project site by L&L from 2003 to 2018 (L&L 2003a, 2003b, 2004a, 2004b, 2004c, 2005, 2006a, 2006b, 2007, 2011, 2013, 2017, 2018b) detected the following special status species (Figures 7 through 10):

- coastal California gnatcatcher (*Polioptila californica californica*; federal threatened, CDFW Species of Special Concern, MSHCP Adequately Conserved),
- white-tailed kite (*Elanus leucurus*; California Fully Protected, MSHCP Adequately Conserved),
- coast horned lizard (*Phrynosoma blainvillii*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- northern harrier (*Circus cyaneus*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- San Diego black-tailed jackrabbit (*Lepus californicus bennetti*; CDFW Species of Special Concern, MSHCP Adequately Conserved),
- orange-throated whiptail (*Aspidoscelis hyperythra*; CDFW Watch List, MSHCP Adequately Conserved),
- Cooper's hawk (*Accipiter cooperi*; CDFW Watch List, MSHCP Adequately Conserved),
- California horned lark (*Eremophila alpestris actia*; CDFW Watch List, MSHCP Adequately Conserved),
- Costa's hummingbird (*Calypte costae*; CDFW Special Animal, not covered by MSHCP).
- great blue heron (fly over) (*Ardea herodias*; CDFW Special Animal, MSHCP Adequately Conserved),

All of these species are considered Adequately Conserved under the MSHCP except Costa's hummingbird, which is not covered under the MSHCP.

Two (2) special status species were observed or detected during the 2019 survey (Figure 11): coastal California gnatcatcher and California horned lark. Both were previously observed onsite.

4.4.1) Burrowing Owl

Previous focused surveys for burrowing owl (2005, 2006, 2007, 2011, and 2013) did not detect burrowing owls utilizing the site. However, one (1) location may have been used in the relatively recent past, based on presence of a single feather found during the 2013 survey at an entrance to a hole beneath a grouping of medium-sized rocks. No burrowing owl or sign was observed during 2017 general biological surveys.

Focused surveys in 2018 observed a single burrowing owl onsite and one (1) burrow with signs of occupation (Figure 10). The burrow was found very close to where the owl was observed. Pellets, scat, feathers, owl tracks, and pieces of shredded cloth were observed at the burrow entrance. It was not determined if the owl was using the burrow for nesting purposes. The burrow was surveilled during subsequent site visits, but there were no additional observations of burrowing owl adults or juveniles. Coyote and/or dog tracks were observed around the burrow, but the burrow itself was not disturbed and there were no signs that owls had been predated. No other active burrows or burrowing owls were observed during surveys in 2018.

Focused surveys in 2019 did not detect any burrowing owl, occupied burrows, or owl sign. The agricultural fields on the site, including the site of the 2018 burrow observation, had tall, dense non-native vegetation. This vegetation created unsuitable conditions for burrowing owl. If future farming activities remove this vegetation, potentially suitable habitat may be present on the site again.

4.5) Jurisdictional Areas (MSHCP Riparian/Riverine and Vernal Pool Habitat)

The subject site contains woody, water-dependent vegetation. Arroyo willow, Fremont cottonwood, and mulefat are present within the mapped features (Figure 12). An ephemeral stream is present and mapped as a USGS blue-line stream. Surface water was not observed within any of the onsite drainage features during the 2013 or 2017 surveys. An updated jurisdictional delineation was completed in 2011, revised in 2013, and updated and verified in 2018 and 2019 (L&L 2011, 2018a, 2019).

Soil types within the study area are not consistent with an alkali playa or vernal pool complex and pools or depressions characteristic of vernal pool habitat were not noted as present onsite.

No MSHCP species listed for protection associated with riparian/riverine areas and vernal pools were observed. No fairy shrimp or potential fairy shrimp habitat was observed during this study.

5.0) IMPACTS AND RECOMMENDATIONS

The purpose of this study was to identify biological resources on the project site, specifically burrowing owl.

The impacts and recommendations identified are based on the literature review, knowledge of species and habitats in the site vicinity, and the biological field survey. The information in this section is intended to serve as a planning tool for making decisions about future development of the project site.

No burrowing owl, occupied burrows, or owl sign were observed onsite during the breeding season survey in 2019. The agricultural fields on the site, including the site of the 2018 burrow observation, had tall, dense non-native vegetation. This vegetation created unsuitable conditions for burrowing owl. If future farming activities remove this vegetation, potentially suitable habitat may be present on the site again. A preconstruction burrowing owl survey is recommended. Annual burrowing owl surveys are advisable until the project reaches the construction stage.

Trees and other vegetation and habitat suitable for nesting birds are present within and around the site and a potential raptor nest site (unoccupied) is present onsite. Based upon presence of potential nesting habitat, a preconstruction clearance survey for nesting birds, including raptors, is recommended prior to any site disturbance during the nesting season (generally February 1 through August 31). If nesting birds are present, avoidance of nests will be required and a buffer of at least 500 feet is recommended until juvenile birds have fledged and/or an authorized biologist has verified that the nest has become inactive.

Previous surveys identified one (1) special status plant species, long-spined spineflower. Under the MSHCP, this species is considered to be Adequately Conserved. Special status wildlife species observed during surveys include coastal California gnatcatcher, California horned lark, San Diego black-tailed jackrabbit, great blue heron, coast horned lizard, Cooper's hawk, white-tailed kite, northern harrier, and Costa's hummingbird. All of these species are considered Adequately Conserved under the MSHCP except Costa's hummingbird, which is not covered under the MSHCP.

Soil types are not consistent with an alkali playa or vernal pool complex and pools or depressions characteristic of vernal pool habitat were not identified onsite. No MSHCP species

listed for protection associated with riparian/riverine areas and vernal pools were observed. No fairy shrimp or potential fairy shrimp habitat was observed during this study.

Jurisdictional areas were identified onsite and have been reported previously. Regulatory permits will be required for impacts to jurisdictional areas.

APPENDIX A: Plant and Wildlife Species

Table 2. Plant and wildlife species. Plant and wildlife species identified on the Golden Meadows site during surveys from 2003 to 2018. One asterisk (*) indicates a non-native species; two asterisks (**) indicates a special status species; a question mark (?) indicates uncertainty regarding identification or native status. Wildlife species list excludes invertebrates.

Plants [N=115]

	Scientific Name	Common Name
	VASCULAR PLANTS	
	Dicotyledons	
	ADOXACEAE	**MUSKROOT FAMILY**
	Sambucus nigra ssp. *cerulea* *(S. mexicana)*	Mexican elderberry, blue elderberry
	AMARANTHACEAE	**AMARANTH FAMILY**
*	*Amaranthus albus*	Tumbleweed, tumbling pigweed
	ANACARDIACEAE	**SUMAC or CASHEW FAMILY**
*	*Schinus molle*	Peruvian pepper tree
	APIACEAE	**CELERY FAMILY**
	Daucus pusillus	Rattlesnake weed, wild carrot
	ASTERACEAE	**ASTER FAMILY**
	Acourtia microcephala *(Perezia microcephala)*	Scapellote, perezia
	Ambrosia acanthicarpa	Annual bur-sage, annual sandbur
*	*Anthemis cotula*	Mayweed, dog mayweed
	Artemisia californica	California sagebrush
	Baccharis salicifolia (B. glutinosa)	Mulefat
	Bebbia juncea	Sweetbush
*	*Centaurea melitensis*	Tocalote
	Chaenactis artemisiifolia	White pincushion, wormwood pincushion
	Corethrogyne filaginifolia var. *filaginifolia* *(Lessingia filaginifolia)*	California-aster, sand-aster
	Deinandra fasciculata *(Hemizonia fasciculata)*	Fascicled tarplant, slender tarweed
	Encelia farinosa	Brittlebush
	Erigeron canadensis *(Conyza canadensis)*	Horseweed, mare's tail
	Eriophyllum confertiflorum	Golden-yarrow

	Eriophyllum multicaule	Many-stem woolly daisy
	Gutierrezia californica (G. bracteata)	California matchweed
	Helianthus annuus	Western sunflower
*	*Lactuca serriola*	Prickly lettuce
	Lasthenia californica (L. chrysostoma)	California goldfields
	Layia platyglossa	Tidy-tips
	Logfia filaginoides (Filago californica)	California filago
*	*Matricaria discoidea (Chamomilla suaveolens, M. matricarioides)*	Pineapple weed
	Rafinesquia californica	California chicory
*	*Senecio vulgaris*	Common groundsel
*	*Sonchus oleraceus*	Common sow thistle
	Stephanomeria virgata	Wreath plant
	Stylocline gnaphaloides	Everlasting neststraw
	Tetradymia comosa	Hairy horsebrush, common-thorn
	Uropappus lindleyi (Microseris lindleyi, M. linearifolia)	Silverpuffs
*?	*Xanthium spinosum*	Spiny cocklebur

BORAGINACEAE **BORAGE OR WATERLEAF FAMILY**

	Amsinckia intermedia (A. menziesii var. intermedia)	Large flower rancher's fiddleneck
	Cryptantha intermedia	Common cryptantha
	Heliotropium curassavicum	Wild heliotrope
	Pectocarya linearis	Slender pectocarya
	Phacelia minor	Wild Canterbury bells
	Phacelia ramosissima	Branching phacelia
	Plagiobothrys sp.	Popcornflower

BRASSICACEAE **MUSTARD FAMILY**

*	*Brassica nigra*	Black mustard
*	*Hirschfeldia incana (Brassica geniculata)*	Shortpod mustard
	Lepidium nitidum	Shining peppergrass
*	*Raphanus sativus*	Wild radish
*	*Sisymbrium irio*	London rocket
*	*Sisymbrium orientale*	Wild mustard, hare's ear cabbage
	Thysanocarpus curvipes	Lacepod

CACTACEAE **CACTUS FAMILY**

	Cylindropuntia californica var. *parkeri (Opuntia parryi)*	Valley cholla

CHENOPODIACEAE **GOOSEFOOT FAMILY**

*	*Chenopodium murale*	Nettle-leaved goosefoot, lamb's quarters
*	*Salsola tragus*	Russian thistle
CONVOLVULACEAE		**MORNING-GLORY FAMILY**
	Calystegia macrostegia	Morning-glory
	Cuscuta californica	Chaparral dodder, witch's hair
CRASSULACEAE		**STONECROP FAMILY**
	Crassula connata (C. erecta)	Pygmy-weed, pygmy stonecrop
CUCURBITACEAE		**GOURD FAMILY, CUCUMBER FAMILY**
	Cucurbita foetidissima	Calabazilla
	Marah macrocarpa	Chilicothe, wild cucumber
EUPHORBIACEAE		**SPURGE FAMILY**
	Croton setiger (C. setigerus, Eremocarpus setiger, E. setigerus)	Turkey-mullein, doveweed
	Euphorbia albomarginata (Chamaesyce albomarginata)	Rattlesnake sandmat, rattlesnake weed
FABACEAE		**LEGUME FAMILY, PEA FAMILY**
	Acmispon americanus (Lotus purshianus, L. unifoliatus)	"Spanish" clover
	Acmispon glaber (Lotus scoparius)	Deerweed
	Lupinus sp.	Unid. lupine
	Lupinus bicolor	Miniature lupine, dove lupine
*	*Medicago polymorpha*	California burclover
*	*Vicia villosa*	Winter vetch
GERANIACEAE		**GERANIUM FAMILY**
*	*Erodium botrys*	Long-beak filaree
*	*Erodium cicutarium*	Redstem filaree
LAMIACEAE		**MINT FAMILY**
*	*Marrubium vulgare*	Horehound
	Salvia apiana	White sage
	Salvia columbariae	Chia
	Salvia mellifera	Black sage
	Trichostema lanceolatum	Vinegar weed
MALVACEAE		**MALLOW FAMILY**
*	*Malva parviflora*	Cheeseweed
MYRSINACEAE		**MYRSINE FAMILY**
*	*Anagallis arvensis*	Scarlet pimpernel

MYRTACEAE		**MYRTLE FAMILY, EUCALYPTUS FAMILY**
*	*Eucalyptus* sp.	Ornamental eucalyptus
NYCTAGINACEAE		**FOUR O'CLOCK FAMILY**
	Mirabilis laevis var. *crassifolia (M. californica)*	Wishbone bush
ONAGRACEAE		**EVENING-PRIMROSE FAMILY**
	Camissonia sp.	Unid. evening-primrose
	Eulobus californica (Camissonia californica)	California false mustard, mustard evening primrose
PAPAVERACEAE		**POPPY FAMILY**
	Eschscholzia californica	California poppy
PHRYMACEAE		**LOPSEED FAMILY**
	Mimulus aurantiacus (M. puniceus, M. longiflorus)	Bush monkeyflower,sticky monkeyflower
	Mimulus guttatus	Seep monkeyflower
PLANTAGINACEAE		**PLANTAIN FAMILY**
	Antirrhinum nuttallianum	Nuttall snapdragon, violet snapdragon
	Keckiella antirrhinoides	Yellow bush-penstemon
	Plantago erecta	California plantain
POLEMONIACEAE		**PHLOX FAMILY**
	Eriastrum sapphirinum	Sapphire woollystar
	Navarretia hamata	Hooked navarretia
POLYGONACEAE		**BUCKWHEAT FAMILY**
	Chorizanthe fimbriata	Fringed spineflower
**	*Chorizanthe polygonoides* var. *longispina*	Long-spined spineflower
	Eriogonum fasciculatum var. *foliolosum*	Leafy California wild buckwheat, interior California buckwheat
	Eriogonum fasciculatum var. *polifolium*	Mojave Desert California buckwheat
*	*Polygonum aviculare ssp. depressum (P. arenastrum)*	Common knotweed
*	*Rumex crispus*	Curly dock
ROSACEAE		**ROSE FAMILY**
	Adenostoma fasciculatum	Chamise
RUBIACEAE		**MADDER FAMILY, COFFEE FAMILY**
*?	*Galium aparine*	Goose grass, annual bedstraw

SALICACEAE		**WILLOW FAMILY**
	Populus fremontii ssp. *fremontii*	Fremont cottonwood
	Salix lasiolepis	Arroyo willow
SCROPHULARIACEAE		**FIGWORT FAMILY, SNAPDRAGON FAMILY**
	Scrophularia californica	California figwort, coast figwort
SOLANACEAE		**NIGHTSHADE FAMILY**
	Datura wrightii (D. meteloides)	Jimsonweed, tolguacha
*	*Nicotiana glauca*	Tree tobacco
	Solanum americanum	
*?	*(S. nodiflorum)*	White nightshade
TAMARICACEAE		**TAMARISK FAMILY**
*	*Tamarix species*	Tamarisk
URTICACEAE		**NETTLE FAMILY**
*	*Urtica urens*	Dwarf nettle
ZYGOPHYLLACEAE		**CALTROP FAMILY**
*	*Tribulus terrestris*	Puncture vine

Monocotyledons

AGAVACEAE		**CENTURY PLANT FAMILY, AGAVE FAMILY**
	Hesperoyucca whipplei (Yucca whipplei)	Chaparral yucca
LILIACEAE		**LILY FAMILY**
	Calochortus splendens	Splendid mariposa lily
POACEAE		**GRASS FAMILY**
*	*Avena barbata*	Slender wild oat
*	*Avena fatua*	Wild oat
*	*Bromus species*	Non-native brome
*	*Bromus diandrus (B. rigidus)*	Ripgut brome
*	*Bromus madritensis* ssp. *rubens (B. rubens)*	Red brome
*	*Hordeum murinum*	Wall barley, hare barley
*	*Lamarckia aurea*	Goldentop grass
*	*Phalaris species*	Unid. canary grass
*	*Schismus barbatus*	Mediterranean schismus
*	*Triticum aestivum*	Common wheat (cultivated)
THEMIDACEAE		**BRODIAEA FAMILY**

Dichelostemma capitatum (D. pulchella, Brodiaea pulchella)	Blue dicks, wild hyacinth
Muilla maratima	Common muilla

* non-native species ** special status species

Wildlife [N=59]

	Scientific Name	**Common Name**
	VERTEBRATES	
	Reptiles	
	Iguanidae	Iguanid Lizards
	Sceloporus orcutti	Granite spiny lizard
	Uta stansburiana	Side-blotched lizard
	Phrynosomatidae	Spiny Lizards
**	*Phrynosoma blainvillii*	Coast horned lizard
	Teiidae	Whiptails and Relatives
**	*Aspidoscelis hyperythra*	Orange-throated whiptail
**	*Aspidoscelis tigris stejnegeri*	Coastal (western) whiptail
	Birds	
	Accipitridae	Hawks, Eagles, and Harriers
**	*Accipiter cooperii*	Cooper's hawk
	Buteo jamaicensis	Red-tailed hawk
**	*Circus cyaneus*	Northern harrier
**	*Elanus leucurus*	White-tailed kite
	Aegithalidae	Long-tailed Tits
	Psaltriparus minimus	Bushtit
	Alaudidae	Larks
**	*Eremophila alpestris actia*	California horned lark
	Apodidae	Swifts
	Aeronautes saxatalis	White-throated swift
	Ardeidae	Herons
**	*Ardea herodias*	Great blue heron (fly over)
	Cathartidae	Vultures
	Cathartes aura	Turkey vulture
	Charadriidae	Plovers
	Charadrius vociferus	Killdeer
	Columbidae	Pigeons and Doves
*	*Columba livia*	Rock dove, common pigeon
	Zenaida macroura	Mourning dove
	Corvidae	Crows and Jays
	Aphelocoma californica	California scrub jay
	Corvus brachyrhynchos	American crow

	Corvus corax	Common raven
Cuculidae		Cuckoos
	Geococcyx californianus	Greater roadrunner
Emberizidae		Emberizine Sparrows
	Amphispiza belli	Sage sparrow
	Melospiza melodia	Song sparrow
	Pipilo crissalis senicula	California towhee
	Zonotrichia leucophrys	White-crowned sparrow
Falconidae		Falcons
	Falco sparverius	American kestrel
Fringillidae		Finches
	Carduelis psaltria	Lesser goldfinch
	Haemorhous (Carpodacus) mexicanus	House finch
Hirundinidae		Swallows
	Petrochelidon pyrrhonota tachina	Cliff swallow
	Stelgidopteryx serripennis	Northern rough-winged swallow
Icteridae		Icterids
	Agelaius phoeniceus	Red-winged blackbird
	Euphagus cyanocephalus	Brewer's blackbird
	Icterus bullockii	Bullock's oriole
	Sturnella neglecta	Western meadowlark
Mimidae		Mockingbirds
	Mimus polyglottos polyglottos	Northern mockingbird
	Toxostoma redivivum	California thrasher
Odontophoridae		Quail
	Callipepla californica californica	California quail
Parulidae		Wood Warblers
	Dendroica coronata	Yellow-rumped warbler
Picidae		Woodpeckers
	Colaptes auratus	Northern flicker
	Picoides nuttallii	Nuttall's woodpecker
Polioptilidae		Gnatcatchers
	Polioptila caerulea	Blue-gray gnatcatcher
**	*Polioptila californica californica*	Coastal California gnatcatcher
Strigidae		Owls
**	*Athene cunicularia*	Burrowing owl
Sturnidae		Starlings
*	*Sturnus vulgaris*	European starling

Timaliidae		Babblers
	Chamaea fasciata	Wrentit
Trochilidae		Hummingbirds
	Calypte anna	Anna's hummingbird
**	*Calypte costae*	Costa's hummingbird
Troglodytidae		Wrens
	Catherpes mexicanus	Canyon wren
	Thryomanes bewickii	Bewick's wren
Turdidae		Thrushes
	Sialia mexicana	Western bluebird
Tyrannidae		Tyrant Flycatchers
	Sayornis nigricans	Black phoebe
	Sayornis saya	Say's phoebe
	Tyrannus verticalis	Western kingbird

Mammals

Canidae		Dogs, Foxes, and Coyotes
	Canis domesticus	Domestic dog
	Canis latrans	Coyote
Geomyidae		Pocket Gophers
	Thomomys bottae	Botta's pocket gopher (sign)
Leporidae		Rabbits
**	*Lepus californicus*	Black-tailed jackrabbit
	Sylvilagus audubonii	Audubon's cottontail
Sciuridae		Squirrels
	Spermophilus beecheyi	California ground squirrel

BTJA=black-tailed jackrabbit, CAGN=coastal California gnatcatcher, CHL=coast horned lizard, CHPO=long-spined spineflower, GBHE=great blue heron, HOLA=California horned lark, WTKI=white-tailed kite.

S=several, no exact count. Observations may or may not represent the same individuals observed on a different survey date.

*CAGN detected during unrelated survey of adjacent property.

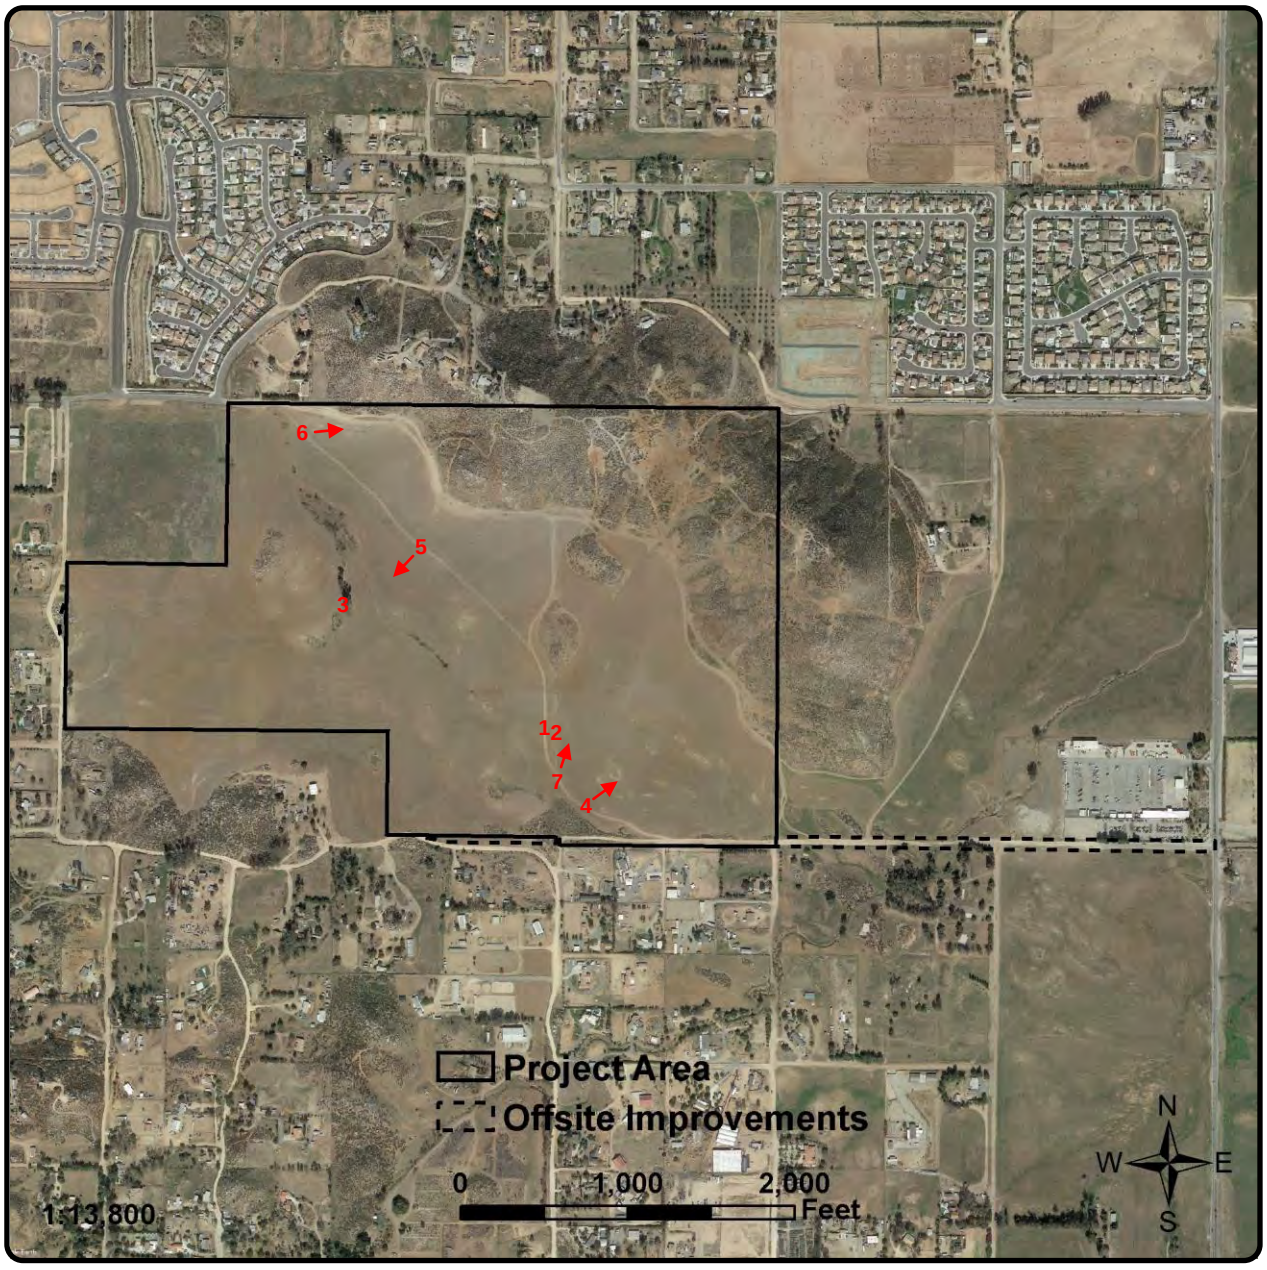
**CAGN was also detected in the same approximate areas on 04.08.17, 04.25.17, and 05.06.17. These are likely the same individuals previously detected in the area.

***BTJA was also detected in the same approximate areas on 04.08.17 and 05.06.17; number of individuals was not determined.

Other species observed during previous surveys are Cooper's hawk (2007), northern harrier (2011, 2013), and Costa's hummingbird (2011); details of these observations are not available.

Details of observations prior to 2011 are not available.

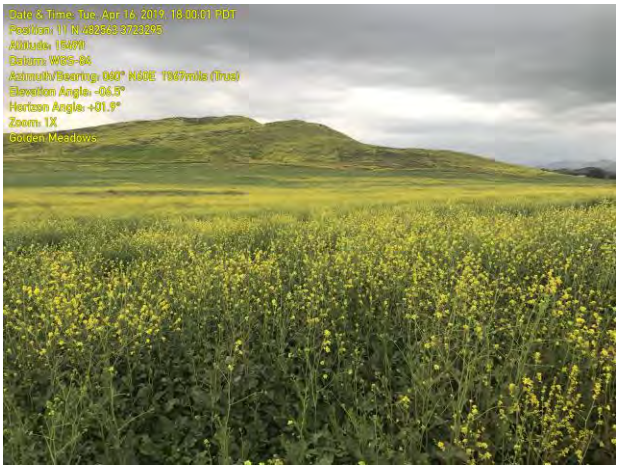
APPENDIX B: Site Photographs



(1) Burrowing owl observed on the site in 2018 (May 30, 2018)

(2) Burrowing owl burrow site (June 14, 2018).

(3) Potential raptor nest (inactive) in eucalyptus tree (June 14, 2018).



(4) Tall, thick growth of mustard and other non-native plants throughout the agricultural fields in 2019 (04.16.2019).

(5) Thick growth of mustard in agricultural fields; eucalyptus tree with inactive raptor nest in background (05.15.2019).

(6) Agricultural fields with buckwheat scrub on slopes in the background (06.23.2019).

(7) Vicinity of 2018 burrow showing thick growth of non-native vegetation in 2019 (06.23.2019).

APPENDIX C: Riverside County Documentation

Certification

Certification: I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Species of concern shall be any unique, rare, endangered, or threatened species. It shall include species used to delineate wetlands and riparian corridors. It shall also include any hosts, perching, or food plants used by any animals listed as rare, endangered, threatened, or candidate species by either state, or federal regulations, or for Riverside County as listed by the California Department of Fish and Wildlife Natural Diversity Data Base (CNDDB).

I declare under penalty of perjury that the information provided on this summary sheet is in accordance with the information provided in the biological report or habitat assessment.

Biological Resources: (Check the level of impact that applies to the following questions.)

Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

a) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

☐ ■ ☐ ☐

b) Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)?

☐ ■ ☐ ☐

c) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, or U. S. Wildlife Service?

☐ ■ ☐ ☐

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ■ ☐ ☐

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources
(Submit two copies to the County)

e) Have a substantial adverse effect on any riparian habitat, or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or the U.S. Fish and Wildlife Service?

☐ ■ ☐ ☐

f) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pools, coastal, etc.) through direct removal, filling, hydrological interruption)

☐ ■ ☐ ☐

g) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

☐ ■ ☐ ☐

Findings of Fact:

No burrowing owl, occupied burrows, or owl sign was identified during 2019 surveys. One (1) burrowing owl and one (1) potentially occupied burrow were observed on the site in 2018. Tall, dense non-native vegetation on the site in 2019 made conditions unsuitable for burrowing owl. If future farming removes this vegetation, habitat may be suitable for burrowing owl again.

Potential nesting bird habitat is present onsite. One (1) inactive potential raptor nest is present onsite.

One (1) special status plant species and nine (9) special status wildlife species have been identified onsite during past and present surveys (long-spined spineflower, coastal California gnatcatcher, Cooper's hawk, white-tailed kite, California horned lark, great blue heron, northern harrier, Costa's hummingbird, black-tailed jackrabbit, and coast horned lizard). Coastal California gnatcatcher and California horned lark were observed in 2019.

A mapped blue-line stream is present onsite and is associated with riparian/riverine vegetation.

Proposed Mitigation:

Avoidance and/or onsite or offsite restoration of riparian habitat is recommended. Preconstruction surveys for burrowing owl and other nesting bird species are recommended prior to disturbance of the site. Annual burrowing owl surveys are advisable until construction starts.

Monitoring Recommended:

None.

Report Summary:

The Project site is in the area covered by the MSHCP but is not in the Criteria Area. The site is mainly agricultural land and disturbed/ruderal areas with some coastal scrub, chaparral, and scattered riparian vegetation. One sensitive vegetation community is present, arroyo willow thickets. No listed plant species observed. Two special status plants, long-spined spineflower and southern California black walnut observed. One immature coast live oak and other trees present. Coastal California gnatcatcher present and nesting on the site. White-tailed kite observed foraging but no nesting. No vernal pools or fairy shrimp habitat. Riparian birds considered absent. Several special status wildlife species observed. One burrowing owl and occupied burrow observed in 2018 but not present in 2021. A preconstruction survey is required. Habitat suitable for nesting birds is present and preconstruction clearance survey and avoidance buffers recommended during the nesting season. Site is not within a wildlife corridor. Jurisdictional and MSHCP riparian/riverine areas present. Regulatory permits and a DBESP are required.

Surveys Conducted By: Guy Bruyea and John Konecny

Surveys Conducted: May – November 2021

Report Date: October 2017, updated October 2018, July 2019, November 2021, revised December 2021

MANAGEMENT SUMMARY

L&L Environmental, Inc. (L&L) conducted biological surveys on Richland Communities' ±204.65-acre Golden Meadows Project site (and associated offsite improvement areas of ±4.68 acres) in the City of Menifee, California. The Project consists of construction of 572 single-family residential lots and associated roads and infrastructure. A blue-line stream runs through the site and the Project includes an Avoidance/Compatible Use Area along the stream that will retain native habitat and natural flows. Open space will also be retained in the northeast corner of the site. An Environmental Impact Report (EIR) for the Project was published in 2006.

L&L has performed biological surveys on this property since 2003. The purpose of this study was to examine the site to determine presence/absence of biological resources on the property and potential for special status species to occur, as well as update previous survey results. Surveys in 2021 included a biological resources assessment/habitat assessment, focused botanical survey, protocol breeding season burrowing owl survey, nesting raptor survey, and riparian bird habitat assessment. This study reflects the most current field conditions and, where appropriate, makes comparative statements regarding past observed conditions.

The site is within the area covered by the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP requires habitat assessments, and focused surveys if suitable habitat is present, for riparian/riverine resources and associated species and burrowing owl (*Athene cunicularia*). There is one area of Public/Quasi-Public (PQP) Conserved Lands approximately 0.68 miles north-northeast of the site, identified as the Ringing Rock Archaeological Site. Other than the Ringing Rock Site, there are no PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

The site consists mainly of cultivated agricultural fields (dry-farmed wheat) and disturbed/ruderal areas with some areas of disturbed to relatively undisturbed California buckwheat scrub and chamise chaparral. The ephemeral blue-line stream runs through the agricultural fields and includes scattered and degraded riparian vegetation (arroyo willow thickets and mulefat thickets). Arroyo willow thicket is a sensitive vegetation community. No vernal pools or ponding areas were observed.

Land use adjacent to the site includes anthropogenic disturbances such as rural residential development, agricultural areas, unimproved roads, powerline easements, off-highway vehicle (OHV) activity, and trash dumping.

No state or federally listed threatened or endangered plant species were observed on the site. Two (2) special status plant species were observed, southern California black walnut (*Juglans californica*) and long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*). Five (5) black walnut trees are present within the riparian area on the site. Two long-spined spineflower plants were present in 2017 but the species has not been observed during subsequent surveys. Both of these species are covered under the MSHCP and considered adequately conserved. No other special status plants were observed onsite during previous or current surveys, but three (3) species have a low to moderate or moderate potential to occur: smooth tarplant (*Centromadia pungens ssp. laevis*), Parry's spineflower (*Chorizanthe parryi var. parryi*), and small-flowered morning-glory (*Convolvulus simulans*). All of these species are covered under the MSHCP and considered adequately conserved.

There is a single immature coast live oak tree and a number of other native and non-native trees on the site, mainly in the riparian area. The City may regulate removal or replacement of trees and a tree survey may be required.

Previous and current surveys have documented coastal California gnatcatchers (*Polioptila californica californica*) present on the Project site and nesting has been observed. This species is federally listed as threatened. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Under the MSHCP, focused surveys for this species are not required.

Two white-tailed kites (*Elanus leucurus*) were observed on the Project site in 2005 and one in 2011, but this species has not been observed on the site during more recent surveys. This species is fully protected in California. The EIR includes a mitigation measure (4.3-5) requiring a nesting raptor survey prior to issuance of grading permits and a CDFW Incidental Take Permit (2080 permit) if white-tailed kite are documented as nesting on the Project site. The California Natural Diversity Database (CNDDB) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the Project site but no white-tailed kite nesting has been observed onsite. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

No vernal pools, ponding areas, or potential habitat for fairy shrimp were observed. The riparian vegetation on the site is scattered and degraded and there is no suitable habitat for least Bell's vireo (*Vireo bellii pusillus*), southwestern willow flycatcher (*Empidonax traillii extimus*), or western yellow-billed cuckoo (*Coccyzus americanus occidentalis*).

Two other listed species have a moderate or high potential to occur on the Project site, although they have not been observed: Stephens' kangaroo rat (*Dipodomys stephensii*) and tricolored blackbird (foraging) (*Agelaius tricolor*). Both of these species are covered under the MSHCP and considered adequately conserved. Under the MSHCP, focused trapping surveys for Stephens' kangaroo rat are not required.

Habitat suitable for use by burrowing owl is present on much of the property but is regularly disturbed by agricultural activities. There were no observations of burrowing owls during biological surveys of the site in 2003, 2004, 2005, 2006, 2011, 2013, and 2017. Surveys in 2018 observed one burrowing owl and an active burrow. The owl was observed during the survey on May 30, 2018 but was not observed during subsequent surveys. Focused surveys in 2019 and 2021 did not detect any burrowing owl, occupied burrows, or owl sign. A preconstruction clearance survey for burrowing owl (valid for 30 days) will be required.

Other special status wildlife species have observed on the site during previous and current surveys: coast horned lizard (*Phrynosoma blainvillii*), orange-throated whiptail (*Aspidoscelis hyperythra*), coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*), Cooper's hawk (*Accipiter cooperii*), northern harrier (*Circus hudsonius*), California horned lark (*Eremophila alpestris actia*), great egret (*Ardea alba*), great blue heron (fly over) (*Ardea herodias*), Lawrence's goldfinch (*Spinus lawrencei*), loggerhead shrike (*Lanius ludovicianus*), California thrasher (*Toxostoma redivivum*), southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*), Bell's sage sparrow (*Artemisiospiza belli belli*), Nuttall's woodpecker (*Dryobates nuttallii*), wrentit (*Chamaea fasciata*), Costa's hummingbird (*Calypte costae*), rufous hummingbird (*Selasphorus rufus*), and San Diego black-tailed jackrabbit (*Lepus californicus bennettii*).

All of these species are covered under the MSHCP and considered adequately conserved except great egret, Lawrence's goldfinch, California thrasher, Nuttall's woodpecker, wrentit, Costa's hummingbird, and rufous hummingbird, which are not covered under the MSHCP.

Five (5) additional special status wildlife species have not been observed on the Project site during surveys but have a low to moderate potential to occur: Crotch bumble bee (*Bombus*

crotchii), southern California legless lizard (*Anniella stebbinsi*), Dulzura pocket mouse (*Chaetodipus californicus femoralis*), northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*), and western mastiff bat (foraging) (*Eumops perotis californicus*). Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP. Crotch bumble bee was previously a candidate for state listing, but its status is currently in litigation. If this species becomes listed, focused surveys and incidental take permitting may be required.

Nesting birds are protected under State and federal laws and habitat suitable for nesting birds (including raptors) is present within and around the site. Scheduling Project activities outside the nesting season (generally January 1 through September 15) or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended. If nesting birds are present, an avoidance buffer of 300 to 500 feet (or as recommended by a biologist) should be established around active nests until juvenile birds have fledged and/or a biologist has verified that the nest has become inactive.

The Project site is largely surrounded by scattered existing development and there is no connectivity between the site and conserved lands to the east (Diamond Valley Lake) and southwest (Santa Rosa Plateau, Cleveland National Forest). Although there may be limited local movement of wildlife across the site, it is not within or adjacent to a wildlife corridor.

An ephemeral blue-line stream is present on the site and includes state waters and wetlands, federal waters, and MSHCP riparian/riverine habitat. All jurisdictional areas onsite will either be impacted by development or incorporated into the Avoidance/Compatible Use Area. The Avoidance/Compatible Use Area will retain native riparian habitat and natural flows. Regulatory permits from the U.S. Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW) will be required for impacts to jurisdictional areas. A Determination of Biologically Equivalent or Superior Preservation (DBESP) will be required for impacts to MSHCP riparian/riverine habitat.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

1.0) INTRODUCTION

This report was prepared by L&L Environmental, Inc. (L&L) for Richland Communities. It describes the results of biological surveys conducted on a proposed residential development site located within the City of Menifee, Riverside County, California. The Project site consists of Assessor's Parcel Numbers (APNs) 360-300-002, -003, -004, -005, -006, -009, and 360-350-001 (totaling ±204.65 acres) and portions of APNs 360-180-009, 360-300-001, -008, 360-350-019, -022, -023, -024, 360-360-009, -010, -011, and 360-380-004 where offsite improvements are planned (totaling ±4.68 acres).

The 2021 updated assessment consisted of (1) a records search and literature review, conducted to determine the species of concern in the Project area and proximity to closest documented special status species observations, (2) field surveys to identify plants and wildlife on the site and assess presence/absence of habitat for species of concern, (3) a focused botanical survey, (4) a protocol breeding season survey for burrowing owl, and (4) a habitat assessment for riparian birds.

1.1) Project Description

The Project is identified as Golden Meadows (formerly known as Menifee Assemblage), Tract No. 31194, and consists of construction of 572 single-family residential lots and associated roads and infrastructure (Figure 3b). The Project will be constructed in four (4) phases. Offsite impacts include improvements to existing roads and installation of flood control structures. The site plan is provided in Appendix E. An Environmental Impact Report for the Project was published in 2006 (T&B 2006).

The property also includes an Eastern Municipal Water District (EMWD) tank site. The proposed tank site includes two large water tanks and an access road. The tanks will serve multiple developments, including Golden Meadows. The tank site is located within the tract boundary, but it is not within the proposed Project boundary and is not a part of the Project.

The Project includes an Avoidance/Compatible Use Area along the blue-line stream that retains native habitat and natural flows. Open space will also be retained in the northeast corner of the site.

1.2) Location

The site is located in Paloma Valley, west of the Interstate 215 freeway (I-215), south of Newport Road, and east of Murrieta Road (Figure 1). It is located between Wickerd Road to the south and Garbani Road to the north. The site is situated in Sections 15 and 16, Township 6 South, Range 3 West, within the USGS *Romoland* 7.5' series quadrangle map (Figure 2).

The site is generally bounded as follows: to the west by agricultural lands, Evans Road (unimproved), rural residential areas, and a school; to the east by a mixture of disturbed and relatively undisturbed vacant land, Sherman Road (unimproved), and a Frontier Communications building complex and Haun Road beyond; to the north by a mixture of disturbed and relatively undisturbed vacant lands, rural residential areas, Garbani Road (unimproved), and residential developments; and to the south by Wickerd Road (unimproved), and a mix of disturbed and relatively undisturbed vacant lands and rural residential areas (Figure 3a).

1.3) Vegetation and Setting

A review of historical aerial images (NETRonline 2021, Google Earth 2021) finds that most areas of the site have been disturbed in association with agricultural uses since at least 1938. These areas are still under cultivation and do not support native habitat communities. Areas of California buckwheat scrub are present in the less disturbed areas on the property, mainly the slopes in the northeastern corner. Remnants of chamise chaparral are present along the southern site boundary.

An ephemeral drainage feature and mapped blue-line stream is present trending from the southwest/central to the northwest portion of the site, as well as various other jurisdictional features. Much of this area has been impacted by agricultural activities and invasive plants, but limited areas of disturbed and degraded riparian vegetation are present in association with this drainage. No vernal pools or ponding areas were observed onsite.

Land use adjacent to the site includes anthropogenic disturbances such as rural residential development, agricultural areas, unimproved roads, powerline easements, OHV activity, and trash dumping.

Two (2) unimproved roads are present on the property. The first is an unnamed dirt road that begins at the eastern terminus of Daniel Road (in the northwestern corner of the site) and exits at the southeastern corner of the site near the intersection of Wickerd Road and Ascot Way. The second is identified as Krubsack Road, which runs north-south through agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north. Many OHV trails are also present on the property, mainly in the northeastern corner. The 2021 survey found that earthen berms and rock piles had recently been placed on roads and trails to block entrance to the site.

1.4) Soils and Topography

Soils on the Project site were mapped as Wyman loam (WyC2), Vallecitos loam (VeC2), Porterville clay (PsC), Yokohl loam (YbC and YbE3), Cajalco fine sandy loam (CaC2 and CaD2), Cajalco rocky fine sandy loam (CbF2), Honcut sandy loam (HnC and HnD2), Las Posas loam (LaD2), and Las Posas rocky loam (LkD2 and LkF3) (NRCS 2021) (Figure 4).

The most common soils mapped for the subject property are Wyman loam on the central and western portion of the site (in agricultural areas) and Las Posas rocky loams on vegetated

hillsides within the northern and eastern portions of the site. Clay soils are relatively uncommon on the site, but Porterville clay is mapped as present near the southeastern portion of the property. Soils observed onsite range from mostly sandy-loamy within the agricultural areas to rocky loamy on the vegetated hillsides. Cryptobiotic crusts are present, but only within less disturbed portions of the site.

Topographically, much of the site is relatively flat and contains open land with low-relief rocky outcrops. Gently to steeply sloping hills and ridgelines are present within the northeastern portion of the property. The site has a combined maximum vertical relief of roughly 220 feet (67 meters) between the highest and lowest points on the property, with elevation ranging from approximately 1,500 to 1,720 feet (457 to 524 meters) above mean sea level (AMSL).

2.0) METHODS AND PERSONNEL

2.1) Literature Review

Certain plants and animals have been listed as threatened or endangered under state or federal Endangered Species Acts. Other species have not been formally listed, but declining populations or habitat availability are reasons for concern regarding their long-term viability. These species are included in lists compiled by resource management agencies or conservation organizations. In this report, the term "listed" refers to all species that are listed, or candidates for listing, as threatened or endangered by the U.S. Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW). "Special status species" refers to all species included in one or more compendia of rare species, but not listed as threatened or endangered by USFWS or CDFW.

Pertinent literature was reviewed to identify local occurrences and habitat requirements of special status species and communities occurring in the region. Literature reviewed included compendia provided by resource agencies (CDFW 2021a, 2021b), a search of the California Natural Diversity Database (CNDDB; CDFW 2021c) and California Native Plant Society Inventory of Rare and Endangered Plants (CNPS 2021) for the Project topographic quadrangle (Romoland) and adjacent quadrangles (Steele Peak, Perris, Lakeview, Lake Elsinore, Winchester, Wildomar, Murrieta, and Bachelor Mountain), and a search of USFWS Information for Planning and Consultation (IPaC; USFWS 2021a) for the Project site. Reports of previous surveys completed for the site (L&L 2003-2019) were also reviewed. Information from past surveys is summarized and included in this report as appropriate.

Potentials for occurrence of plant and wildlife species were evaluated and classified as either absent, not expected, low, moderate, high, or occurs. These classifications are based on the presence and quality of habitat, geographic and elevation range of species, proximity to a known occurrence of a species obtained from CNDDB or other reliable data, and field observations. Classifications for individual species may be modified based on biologists' experience and expert opinion.

Scientific names of plants follow Baldwin et al. (2012) with updates from the online Jepson eFlora (Jepson 2021). Scientific names of animals follow Stebbins (1985), Jameson and Peeters (1988), Cornell (2021), and Arnett (2000), with updates from academic sources. Current conservation status of plant and wildlife species determined from CDFW (2021a,

2021b). Vegetation community classifications follow Sawyer et al. (2009) with updates from CDFW (2020). State ranks (S ranks) for vegetation communities are from CDFW (2020). Other sources consulted for information regarding biological resources include Brown (1994), Recon (1985), Schoenherr (1990), and Small (1994).

In this report, the "Project site" or "site" includes all of the Project parcels (±204.65 acres) plus offsite impact areas (±4.68 acres) for a total of ±209.33 acres surveyed. Acreages are based on GIS calculations.

2.2) General Biological and Botanical Survey Methods

L&L biologist Guy Bruyea visited the Project site from May through November of 2021 to conduct general biological and botanical surveys (Table 1).

Table 1. General Biological and Botanical Survey Dates and Weather Conditions

Date	Time	Weather	Wind (mph)
05.21.2021	0545-0845	Clear, 50-56º F	1-6
05.21.2021	1700-1930	Clear, 62-67º F	2-5
05.25.2021	0530-0830	Clear, 57-65º F	0-1
05.31.2021	0530-0830	Marine layer/Clear, 61-73º F	0-4
05.31.2021	1700-1930	Clear, 74-82º F	2-4
06.05.2021	0600-1100	Clear, 74-83º F	0-2
06.07.2021	0600-1000	Clear, 58-67º F	0-3
07.06.2021	0600-0900	Clear, 66-75º F	0-2
07.11.2021	0600-0830	Partly Cloudy, 73-81º F	1-2
08.01.2021	0630-1030	Clear, 76-87º F	1-4
11.08.2021	0800-1200	Clear, 66-75º F	0-3
11.09.2021	0900-1300	Clear, 70-79º F	1-5

A total of about 40.5 person-hours were spent onsite during surveys in 2021. All habitat types onsite were visited on foot. The site was surveyed by conducting a series of transects across the subject property where possible, stopping periodically for observations and notations. A general habitat map and field notes were completed at the time of the survey. All field surveys were conducted during daylight hours. Digital photographs were taken to record the condition of the site during the present survey.

The methodology used is consistent with recommendations by the California Native Plant Society (CNPS 2001), CDFW (2018, 2000), and USFWS (2000). All plant species observed were identified in the field or collected for later identification or confirmation. All species were recorded in field notes and the locations of special status species were documented using GPS. Plants of uncertain identity were collected and subsequently identified from keys, descriptions,

and illustrations in Baldwin (2012), Abrams (1923, 1944, and 1951), Abrams and Ferris (1960), Munz (1974), and Parker (1999).

Vegetation community mapping of the site was also verified in 2021. The vegetation mapping from the 2018 biological survey report (L&L 2018a) was used as a basis and verified through field observations. Vegetation community classification is consistent with the California Natural Community List (CDFW 2020) and Sawyer et al. (2009).

2.3) Burrowing Owl Survey Methods

Protocol breeding season burrowing owl surveys were conducted by Mr. Bruyea concurrently with a portion of the general biological and botanical surveys (Table 2).

Table 2. Burrowing Owl Survey Dates and Weather Conditions

Date	Time	Sunrise*	Sunset*	Weather	Wind (mph)
05.21.2021	0545-0845	0547	--	Clear, 50-56º F	1-6
05.21.2021	1700-1930	--	1952	Clear, 62-67º F	2-5
05.31.2021	0530-0830	0542	--	Marine layer/Clear, 61-73º F	0-4
05.31.2021	1700-1930	--	1958	Clear, 74-82º F	2-4
06.05.2021	0600-1100	0541	--	Clear, 74-83º F	0-2
06.07.2021	0600-1000	0541	--	Clear, 58-67º F	0-3
07.06.2021	0600-0900	0547	--	Clear, 66-75º F	0-2
07.11.2021	0600-0830	0550	--	Partly Cloudy, 73-81º F	1-2

*sunrise/sunset times from timeanddate.com

A total of about 25.5 person-hours were spent during burrowing owl surveys in 2021. The site was examined for suitable burrow sites and for signs of occupation by burrowing owl, including pellets, feathers, whitewash, prey remains, and eggshell fragments, as well as individual owls. A search for potentially suitable burrows within dirt, wood, and rock debris piles, artificially created berms, and other locations was conducted during the surveys. The surveys were concentrated in areas typically associated with burrowing owl habitat, including open areas onsite and areas where California ground squirrel activity (i.e., suitable burrows) was expected. An additional 150-meter (500-foot) buffer area surrounding the site was visually inspected, where possible, in areas identified as potential burrowing owl habitat (Figure 5). Any developed areas were visually surveyed with binoculars due to trespassing concerns on private property.

Transects were walked throughout the property where suitable habitat is present. Coupled with binocular surveys of any restricted areas, this allowed for complete visual ground coverage of the survey area. Distance between transects was approximately 15 to 20 meters.

Per MSHCP protocol for burrowing owl surveys (RCA 2006), surveys should be conducted during weather that is conducive to observing owls outside their burrows and detecting burrowing owl sign. Surveys will not be accepted if they are conducted during rain, high winds (>20 mph), dense fog, or temperatures over 90°F. Surveys should be conducted in the morning one hour before sunrise to two hours after sunrise or in the early evening two (2) hours before sunset to one (1) hour after sunset. Surveys were conducted during appropriate hours and weather conditions (Table 2).

2.4) Nesting Raptor Survey Methods

Concurrently with the burrowing owl survey, the site was examined to determine the presence/absence of nesting raptors on the property, in particular white-tailed kite. This survey primarily focused on examining trees onsite and within 500 feet of the Project site for evidence of raptor nesting.

2.5) Riparian Bird Habitat Assessment Methods

A habitat assessment for riparian bird species least Bell's vireo, southwestern willow flycatcher, and western yellow-billed cuckoo was conducted by John Konecny of Konecny Biological Services. Mr. Konecny holds USFWS Section 10(a) permit TE837308-7 for southwestern willow flycatcher.

The habitat assessment was conducted on September 29, 2021 and focused on the riparian vegetation on the site. Weather conditions during the survey were mild with little wind and scattered overcast. No call prompting of any species was conducted.

3.0) RESULTS

3.1) Literature Review Results

3.1.1) MSHCP Requirements

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of Public/Quasi-Public (PQP) Conserved Lands approximately 0.68 miles north-northeast of the site. This PQP area is identified as Ringing Rock Archaeological Site under the management of the Riverside County Parks and Open Space District. Other than the Ringing Rock Site, there are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages (Figure 6).

Surveys required by the MSHCP are a habitat assessment to address riparian/riverine and vernal pool habitats and associated species and burrowing owl (RCA 2021). If suitable habitat is present, focused surveys are required.

The MSHCP mapped vegetation layer (1994 baseline) depicts the site as largely agricultural land with areas of coastal sage scrub, grassland, and chaparral. No riparian habitat or Riversidean alluvial fan sage scrub is mapped on the parcel in the 1994 baseline (RCA 2021).

3.1.2) Precipitation

Precipitation data was obtained from the Clark, Sage, and Cranston Remote Automated Weather Stations (RAWS) (WRCC 2021). The Clark RAWS is located about 16.8 miles north-northwest of the Project site at an elevation of 1,720 feet; Sage RAWS is about 14.7 miles east-southeast of the site at an elevation of 1,516 feet; Cranston RAWS is about 21.0 miles east-northeast of the site at an elevation of 1,950 feet (WRCC 2021).

Total precipitation recorded by the Clark, Sage, and Cranston RAWS for the 2021 water year[1] was 4.96, 6.19, and 6.75 inches, respectively. Average annual precipitation for the Project area is 10 to 15 inches (WRCC 2018). Precipitation data is provided in Appendix C.

[1] A water year is October through September. For example, the 2021 water year is October 2020 through September 2021.

3.1.3) Previous Surveys

L&L reviewed the results of previous biological surveys of the site, which included a general biological survey and a jurisdictional delineation in 2003 (L&L 2003a, 2003b), spring botanical survey and focused surveys for Quino checkerspot butterfly and coastal California gnatcatcher in 2004 (L&L 2004a, 2004b, 2004c), burrowing owl survey, habitat assessment for riparian birds, and updated jurisdictional delineation in 2005 (L&L 2005a, 2005b, 2005c), burrowing owl survey, focused surveys for least Bell's vireo and southwestern willow flycatcher, and a habitat assessment for yellow-billed cuckoo in 2006 (L&L 2006a, 2006b), burrowing owl survey in 2007 (L&L 2007), surveys for special status plants, burrowing owl, and updated jurisdictional delineation in 2011 (L&L 2011), habitat assessment and burrowing owl survey in 2013 (L&L 2013), general biological and botanical survey in 2017 (L&L 2017), burrowing owl and nesting raptor surveys and updated jurisdictional delineation in 2018 (L&L 2018a, 2018b), and burrowing owl surveys and an updated jurisdictional delineation in 2019 (L&L 2019a, 2019b). Previous survey results are summarized and incorporated into this report as appropriate.

3.1.4) 2006 Environmental Impact Report

The 2006 Final Environmental Impact Report (EIR) for the Project (T&B 2006) includes the following mitigation measures for impacts to biological resources:

> 4.3-1 TTM No. 31194, Lot #503 (approximately 39.0 acres in the northeastern portion of the property) shall be preserved as open space and shall be covered by a conservation easement or other mechanism to ensure permanent preservation, with allowance for required maintenance of fuel modification zones. The conservation easement area shall be shown on the Final Map.
>
> 4.3-2 Thirty days prior to grading, a qualified biologist shall make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report to be reviewed and accepted by the County of Riverside. If the species is determined to be present, and the MSHCP's stated objectives 1 – 4 for burrowing owl have not yet been met, mitigation shall be required in compliance with the MSHCP, Appendix E which states:
>
> > a. If the site contains or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and surrounding area supports

less than 3 pairs of burrowing owls, then the on-site burrowing owls shall be passively or actively relocated following accepted protocols.

b. If the site (including adjacent areas) supports 3 or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs shall be conserved on-site.

4.3-3 Prior to issuance of grading permits, the applicant shall be required to pay Local Development Mitigation Fees (per County Ordinance No. 4.62.070) for implementation of the MSHCP.

4.3-4 Prior to issuance of grading permits, the applicant shall pay fees in accordance with the USFWS-approved HCP, to mitigate the project's potentially significant impacts to the Stephens' kangaroo rat.

4.3-5 If construction activities occur between February 1 and August 31 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors. Measures to avoid impacts will include identifying the location and creating a buffer zone around the tree within which impacts will be avoided until the juveniles have fledged.

a. The white-tailed kite is "fully-protected" by the California Department of Fish and Game. If this species is documented as nesting on the project site during the raptor survey, or it is determined this species will be significantly impacted by development a 2080 permit for "take" shall be required from the CDFG.

4.3-6 Prior to the issuance of grading permits, the applicant shall submit documentation to the County of Riverside verifying that the necessary permits required by the U.S. Army Corps of Engineers (ACOE), California Department of Fish and Game (CDFG) and Regional Water Quality Control Board (RWQCB) have been obtained. The ACOE has a no net loss policy which requires that any unavoidable impacts to wetland values and functions be replaced. In addition, the RWQCB will add restrictions to control runoff from the site, require on the site treatment of runoff to improve water quality, and impose Best Management Practices on the construction. It is anticipated that the following measures

or similar measures as approved by the ACOE, CDFG, and RWQCB would reduce impacts to ACOE and CDFG jurisdictional areas to a level less than significant:

a. On or off-site replacement of ACOE jurisdictional waters and wetlands at a ratio no less than 1:1;

b. On or off-site replacement of CDFG jurisdictional streambed and associated riparian habitat at a ratio no less than 1:1; and/or

c. Incorporation of design features into the proposed project that will avoid biological impacts to off-site blue-line streams that ultimately end up in the Railroad Canyon Reservoir (Canyon Lake).

4.3-7 Individual lot fencing shall be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited. Fencing locations and materials shall be shown on the Final Map and approved by the County's Environmental Programs Department (EPD) prior to issuance of building permits. Required fencing shall be installed prior to issuance of occupancy permits.

4.3-8 Night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in project designs to ensure ambient lighting in the wetland area is not increased. Lighting plans shall be approved by the County prior to issuance of building permits. Lighting restrictions and the reasons for such restrictions shall be included in the project's CC&Rs.

4.3-9 The landscape plans for the project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as "Plants That Should Be Avoided Adjacent to The MSHCP Conservation Area." The County of Riverside Planning Department shall review and approve all plant material for the project, prior to issuance of building permits. Information regarding the importance of avoiding the listed plants, even in front and backyard landscaping, shall be included in sales literature distributed to homeowners. The list of restricted plant materials and the reasons for such restrictions shall be listed in the project's CC&Rs.

3.2) Vegetation Communities

Much of the property has been disturbed by current and historical cultivation and past sheep grazing and does not support native habitat. Less disturbed areas are present, primarily in the northeastern portions of the site, with a mixture of disturbed and relatively undisturbed California buckwheat scrub and chamise chaparral. Sparse riparian vegetation and trees are found along the blue-line stream in the northwestern/central portion of the site (Figure 7).

The agricultural fields are dry farmed for wheat. Evidence of widespread sheep grazing was observed throughout all areas of the site in 2013. Hillsides containing California buckwheat scrub along the farmland edges, especially to the north and east, had been severely damaged by sheep grazing. Very few annuals remained (none in some areas) and many of the perennials had been stripped of vegetation and/or trampled. No evidence of current sheep grazing was observed during surveys in 2017, 2018, 2019, and 2021 and regrowth of native annuals and perennials was observed in the buckwheat scrub areas.

Table 3. Vegetation Communities Present

Vegetation Community	**Area Present (acres)**		
	Onsite	**Offsite**	**Total**
California Buckwheat Scrub	41.69	0	41.69
California Buckwheat Scrub/Ruderal	3.18	0	3.18
Chamise Chaparral	2.05	0.18	2.23
Arroyo Willow Thickets and Mulefat Thickets	0.91	0.02	0.93
Agriculture and Disturbed/Ruderal	156.82	4.48	161.30
Total	**204.65**	**4.68**	**209.33**

Table 4. Vegetation Community Impacts

Vegetation Community	**Area Impacted (acres)***		
	Onsite	**Offsite**	**Total**
California Buckwheat Scrub	18.49**	0	18.49**
California Buckwheat Scrub/Ruderal	2.83	0	2.83
Chamise Chaparral	2.05	0.18	2.23
Arroyo Willow Thickets and Mulefat Thickets	0.11	0.02	0.13
Agriculture and Disturbed/Ruderal	152.66	4.48	157.14
Total	**176.14**	**4.68**	**180.82**

*Any discrepancy in totals due to rounding error. **Includes the water tank site. The water tank site is a separate project covered under a separate CEQA process by EMWD and not a part of the Golden Meadows Project.

3.2.1) California Buckwheat Scrub

In previous reports, this vegetation community was referred to by the older name of Riversidean sage scrub (Holland Element Code 32700). Under the more recent Sawyer et al. (2009) classification, this type of coastal scrub is best classified as California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance). CDFW ranks this community as S5 (secure – common, widespread, and abundant) and it is not considered sensitive.

California buckwheat scrub is present on the northeastern portion of the site on south, west, and east-facing slopes containing numerous rocky outcrops. Native shrubs and other conspicuous plants commonly observed in these areas include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and white sage (*Salvia apiana*). Other conspicuous plants include brittlebush (*Encelia farinosa*), yellow bush-penstemon (*Keckiella antirrhinoides*), wishbone bush (*Mirabilis laevis* var. *crassifolia*), sweetbush (*Bebbia juncea*), and black sage (*Salvia mellifera*). Annuals are also abundant in this community and include natives such as wreath plant (*Stephanomeria virgata*) and western sunflower (*Helianthus annuus*) and non-natives such as shortpod mustard (*Hirschfeldia incana*), red brome (*Bromus rubens*), slender wild oat (*Avena barbata*), and Mediterranean grass (*Schismus barbatus*).

Open patches can be found throughout portions of the buckwheat scrub onsite and contain a mixture of native and non-native annuals. Natives include popcorn flower (*Plagiobothrys* species), large flower rancher's fiddleneck (*Amsinckia intermedia*), common cryptantha (*Cryptantha intermedia*), evening primrose (*Camissonia* species), wild carrot (*Daucus pusillus*), slender tarweed (*Deinandra fasciculata*), and phacelia (*Phacelia* species). Other plants observed include chia (*Salvia columbariae*), perezia (*Acourtia microcephala*), hooked navarretia (*Navarretia hamata*), sapphire woollystar (*Eriastrum sapphirinum*), and fringed spineflower (*Chorizanthe fimbriata*).

3.2.2) Chamise Chaparral

In previous reports, this vegetation community was referred to by the older name of northern mixed chaparral (Holland Element Code 37130). Under the more recent Sawyer et al. (2009) classification, this vegetation community is best classified as chamise chaparral (*Adenostoma fasciculatum* Shrubland Alliance) or chamise–black sage chaparral (*Adenostoma fasciculatum–Salvia mellifera* Shrubland Alliance). CDFW ranks chamise chaparral as S5 (secure – common,

widespread, and abundant) and chamise-black sage chaparral at S4 (apparently secure – uncommon but not rare). The chaparral on the site is not considered sensitive.

Common species found in the chaparral areas onsite are chamise (*Adenostoma fasciculatum*), black sage, and other perennials. A poorly developed understory is usually present in association with chaparral and is characteristic of this vegetation community on the site.

Only small patches of remnant chaparral were observed on the site along the southern boundary. The survey in November 2021 found that a portion of the chamise chaparral on the site had been mowed to the ground.

3.2.3) Arroyo Willow Thickets and Mulefat Thickets

In previous reports, the riparian vegetation onsite was referred to by the older names of southern arroyo willow riparian (Holland Element Code 61320), mulefat scrub (Holland Element Code 63310), and disturbed wetland (Holland Element Code 11200). Under the more recent Sawyer et al. (2009) classification, this vegetation community is best classified as arroyo willow thickets (*Salix lasiolepis* Shrubland Alliance) and mulefat thickets (*Baccharis salicifolia* Shrubland Alliance). CDFW ranks arroyo willow thickets as S4 (apparently secure – uncommon but not rare); however, it is considered sensitive. Mulefat thickets are ranked as S5 (secure – common, widespread, and abundant) and not considered sensitive.

Arroyo willow thickets and mulefat thickets are dependent on the presence of at least periodic surface or subsurface water. The northwestern portion of the site contains a degraded blue-line stream sparsely inhabited by arroyo willow (*Salix lasiolepis*), mulefat (*Baccharis salicifolia*), or a mix of the two. A single Fremont cottonwood tree (*Populus fremontii* ssp. *fremontii*), five southern California black walnut trees (*Juglans californica*), black willow (*Salix gooddingii*), and scattered blue elderberry (*Sambucus nigra* ssp. *cerulea*) and non-native tamarisks (*Tamarix* species) are also present. The understory is dominated by native and non-native annuals, including (but not limited to) shortpod mustard, western sunflower, large-flowered rancher's fiddleneck, Spanish clover (*Acmispon americanus*), wild radish (*Raphanus sativus*), mayweed (*Anthemis cotula*), prickly lettuce (*Lactuca serriola*), and non-native grasses, including wheat (*Triticum aestivum*) and oat (*Avena* species).

Surface water was not observed within any of the onsite drainage features during the surveys. Over the course of surveys since 2003, it has been noted that the density and health of riparian

shrubs and trees appears to be declining. Over time, some areas of the streambed and gaps in riparian vegetation have been incorporated into the surrounding agricultural fields.

3.2.4) Agriculture and Disturbed/Ruderal

In previous reports, agricultural fields and disturbed/ruderal areas onsite were referred to by the older designations of Holland Element Codes 18300 and 11300. Agriculture is not included under the more recent Sawyer et al. (2009) classification. Disturbed/ruderal areas that are strongly dominated by annual non-natives may be classified as semi-natural stands, such as *Brassica* (*nigra*) and Other Mustards Semi-natural Herbaceous Stands or *Bromus rubens*—*Schismus barbatus* Semi-natural Herbaceous Stands. These are not considered sensitive vegetation communities.

The majority of the site is under cultivation and consists of dry-farmed wheat crops. Invasive plants are found within farmed portions of the site, and include lamb's quarters (*Chenopodium murale*), calabazilla (*Cucurbita foetidissima*), and knotweed (*Polygonum aviculare*).

Disturbed habitat includes unvegetated areas (such as roads) and areas that contain mostly non-native plant species, including ornamentals and ruderal invasives. Some non-native and weedy species have invaded these areas, including short-pod mustard, red brome, redstem filaree (*Erodium cicutarium*), and various non-native grasses. Other non-native plant species observed in these areas include horehound (*Marrubium vulgare*), Russian thistle (*Salsola tragus*), and tumbling pigweed (*Amaranthus albus*).

3.3) Plant Species

A total of 127 plant species were observed onsite during biological surveys conducted by L&L from 2003 through 2021. Of the 127 plant species present, 46 (36 percent) are non-natives. A list of all plant species identified onsite during previous and current surveys is included in Appendix A.

No state or federally listed plants were observed during surveys and the Project site is not within USFWS designated critical habitat for any listed plant species. Two special status plant species were observed on the site during surveys, long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*) and southern California black walnut (*Juglans californica*). Details of special status plant observations are provided in Table 5 and locations are mapped on Figure 8.

Table 5. Special Status Plant Species Observations

Species	Date	GPS Coordinates (Decimal Degrees)	Number Detected	Elevation (feet)
Long-spined spineflower *Chorizanthe polygonoides var. longispina*	05.12.2017	33.655304, -117.187238	2	~1600
Southern California black walnut *Juglans californica*	09.22.2005 11.08.2021	33.653919, -117.192902	1	1517
	09.22.2005 11.08.2021	33.653955, -117.192924	1	1518
	11.08.2021	33.654018, -117.193226	1	1519
	11.08.2021	33.653468, -117.192879	1	1517
	11.08.2021	33.652603, -117.192823	1	1522

Long-spined spineflower is an annual herb in the Polygonaceae (Buckwheat) family. It is found in chaparral, coastal scrub, meadows and seeps, valley and foothill grasslands, and vernal pools at 100 to 5,020 feet elevation. It flowers from April through July. This species is found in Riverside, Orange, and San Diego Counties and Baja California, Mexico (CNPS 2021).

This species is not state or federally listed as threatened or endangered. It has a California Rare Plant Rank (CRPR) of 1B.2 (rare or endangered in California and elsewhere, moderately threatened in California). It is a covered species under the MSHCP and considered adequately conserved.

Long-spined spineflower was observed on the site in 2017. Two (2) plants were observed on clay soils within California buckwheat scrub in the northeast portion of the site along an east-west ridgeline. This area has been impacted by OHV use and the species has not been observed during subsequent surveys. Long-spined spineflower has also been documented by the CNDDB (Element Occurrence #57) on the east-central portion of the site. This record is from 2004 and estimates at least 100,000 plants on five acres of the site. It was not observed in this location during L&L surveys.

Southern California black walnut is a deciduous tree in the Juglandaceae (Walnut) family. It is found in chaparral, cismontane woodland, coastal scrub, and riparian woodland at 165 to 2,955 feet elevation. It is endemic to California and found in portions of southern, central, and northern California (CNPS 2021).

This species is not state or federally listed as threatened or endangered. It has a CRPR of 4.2 (limited distribution, moderately threatened in California). It is a covered species under the MSHCP and considered adequately conserved.

Five (5) southern California black walnut trees were observed in the riparian area in the central portion of the site. Representative photos are provided in Appendix D.

Three (3) additional special status plant species have a low to moderate or moderate potential to occur on the Project site but not been observed during surveys (see Appendix B). These species are:

- smooth tarplant (*Centromadia pungens ssp. laevis*; CRPR 1B.1 [rare or endangered in California and elsewhere, seriously threatened in California]),
- Parry's spineflower (*Chorizanthe parryi var. parryi*; CRPR 1B.1), and
- small-flowered morning-glory (*Convolvulus simulans*; CRPR 4.2).

These three (3) species are all covered under the MSHCP and considered adequately conserved.

3.3.1) Trees

There is a single immature coast live oak tree (*Quercus agrifolia*) present on the site within the riparian area. Other native trees on the site are blue elderberry, southern California black walnut, Fremont cottonwood, arroyo willow, and black willow. Non-native and escaped ornamental trees on the site include Peruvian pepper tree (*Schinus molle*), eucalyptus, tree tobacco (*Nicotiana glauca*), and tamarisk. The City may regulate removal or replacement of trees and a tree survey may be required.

3.4) Wildlife Species

A total of 85 vertebrate wildlife species, plus domestic dog, have been detected during L&L's biological surveys of the site from 2003 through 2021. An additional 15 common butterfly species were observed (during Quino checkerspot butterfly surveys in 2004) but this does not represent a comprehensive list of insects present. A list of all wildlife species identified onsite is provided in Appendix A. Details of listed and special status species observations are provided in Table 6 and observations are mapped on Figure 9. CNDDB forms for 2021 observations are included in Appendix E.

Figure 9

Special Status Wildlife Observations (2003-2021)

(Photo obtained from Google Earth, August 2021)

Golden Meadows, TT 31194
City of Menifee, California

3.4.1) Listed and Fully Protected Wildlife

Biological surveys conducted on the Project site by L&L from 2003 to 2021 detected two listed or fully protected wildlife species on the site, coastal California gnatcatcher (*Polioptila californica californica*) and white-tailed kite (*Elanus leucurus*), discussed below.

Two other listed species have not been observed on the Project site during surveys but have a moderate or high potential to occur, Stephens' kangaroo rat (*Dipodomys stephensii*) and tricolored blackbird (*Agelaius tricolor*) (see Appendix B).

Stephens' kangaroo rat is federally listed as endangered and state listed as threatened. Based on potentially suitable habitat and multiple documented occurrences in the Project vicinity (CDFDW 2021c), this species has a high potential to occur on the site. Stephens' kangaroo rat is a covered species under the MSHCP and considered adequately conserved. Focused trapping surveys for this species are not required by the MSHCP.

Tricolored blackbird is state listed as threatened. Based on potentially suitable foraging habitat and several eBird records (eBird 2021) in the Project vicinity, this species has a low to moderate potential to forage on the site, but there is no suitable nesting habitat. Tricolored blackbird is a covered species under the MSHCP and considered adequately conserved.

Coastal California Gnatcatcher

Coastal California gnatcatcher is federally listed as threatened and a CDFW Species of Special Concern. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Focused surveys for this species are not required by the MSHCP; however the MSHCP limits disturbance to outside the nesting season.

Surveys from 2004 to 2021 have documented coastal California gnatcatchers on the Project site (Table 6). Nesting was observed in 2004 and breeding pairs were present in 2011, 2017, and 2018. Coastal California gnatcatchers were observed in 2021 and, although nesting was not observed, it is likely. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site (Figure 9).

White-tailed Kite

White-tailed kite (*Elanus leucurus*) is a CDFW Fully Protected species. The classification of Fully Protected was California's initial effort to identify and protect rare wildlife species. With a few exceptions, Fully Protected species have subsequently been listed under the California

and/or Federal Endangered Species Acts. One of the exceptions is white-tailed kite, which is not state or federally listed, but retains its Fully Protected status. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

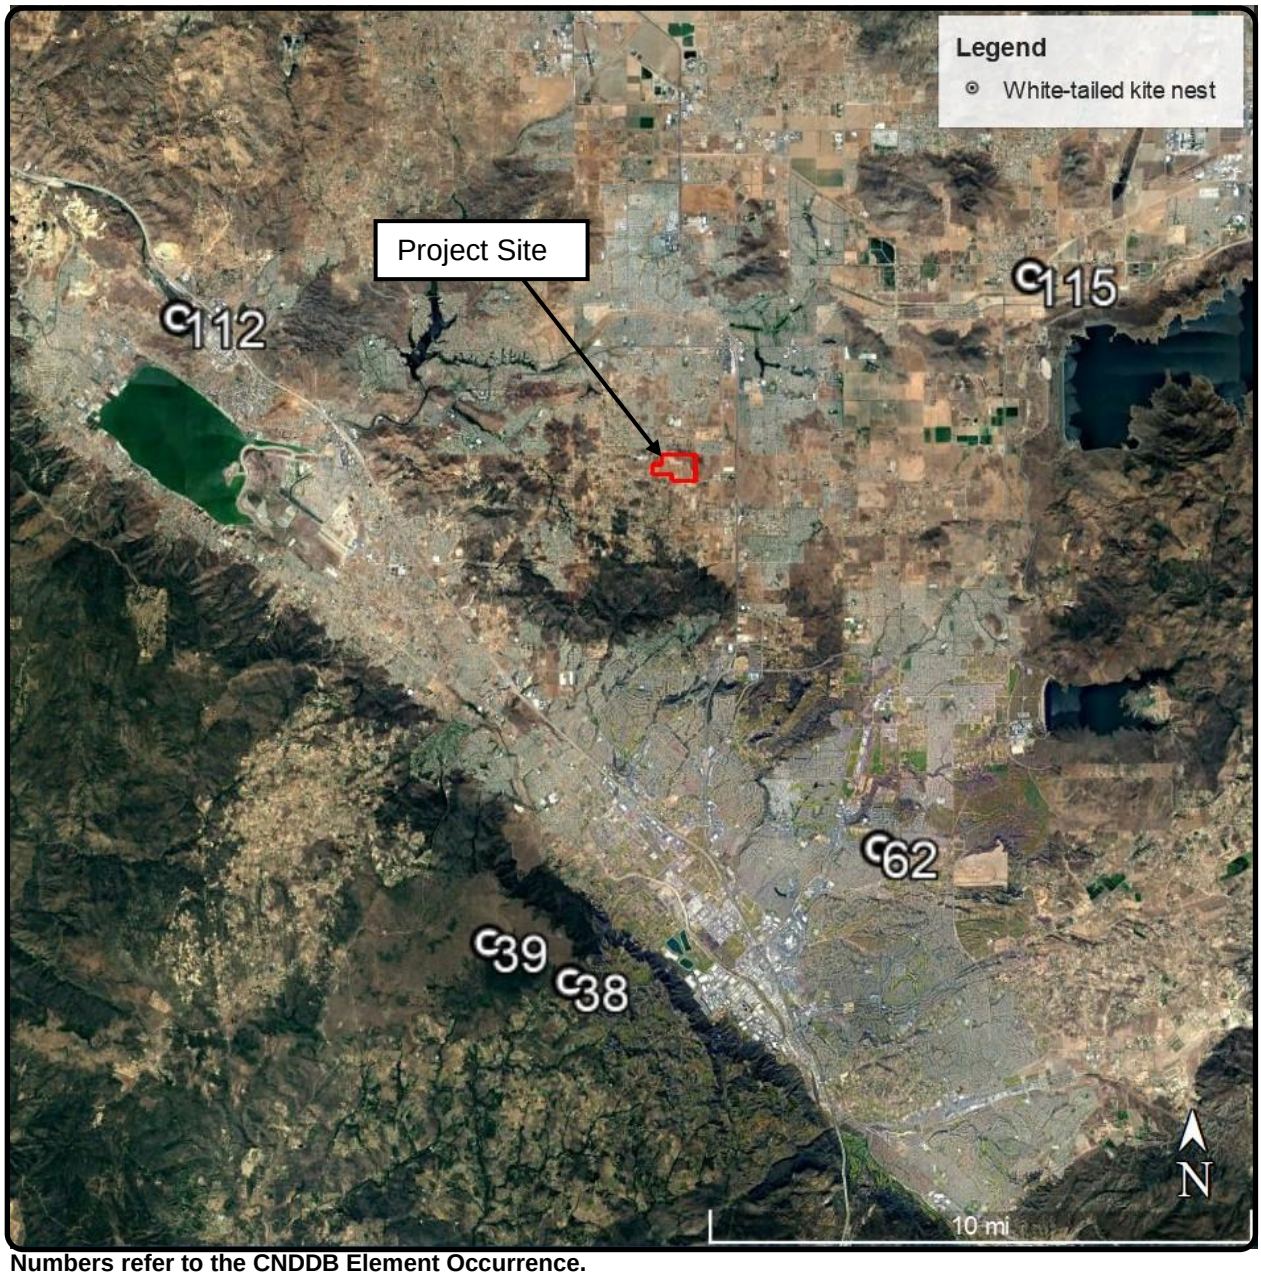
White-tailed kite forages in open grasslands, farmlands, meadows, and wetlands. Nests are located near foraging areas in substantial groves of dense, broad-leafed trees. Nests are built near the top of oaks, willows, or other trees, usually between 20 to 100 feet above the ground. The nest is composed of loosely piled sticks, lined with grass, straw, or rootlets. White-tailed kite breeds from February to October, with a peak from May to August (Zeiner et al. 1990).

The CNDDB (CDFW 2021c) has documented occurrences of five (5) white-tailed kite nests within 10 miles of the Project site (Figure 10):

> Occurrence 38 is approximately 9.3 miles south-southwest of the Project site. The occurrence is located at the Santa Rosa Plateau Preserve within oak savannah and native grassland at an elevation of 1,950 feet. Successful nesting was last documented in 1988 and 1989. Google Earth images show undisturbed habitat present in that area and the occurrence is presumed extant.
>
> Occurrence 39 is approximately 9.2 miles southwest of the Project site. The occurrence is described as located on private land between two parcels of Santa Rosa Plateau Preserve property. The habitat is oak savannah and native grassland at an elevation of 1,820 feet. The nest was last observed in 1989 (active nest, outcome unknown) and noted as threatened by proposed development. Examination of Google Earth images shows undisturbed habitat present in that area. The occurrence is presumed extant.
>
> Occurrence 62 is approximately 7.5 miles southeast of the Project site in Murrieta. The occurrence is located in southern riparian scrub habitat at an elevation of 1,240 feet. The record notes that the area was proposed for development, and Google Earth images now show the occurrence within a narrow area of habitat surrounded by residential developments. A pair of white-tailed kites was last observed in 1999. The occurrence is presumed extant but may have been extirpated by development.
>
> Occurrence 112 is approximately 9.4 miles west-northwest of the Project site and just north of Lake Elsinore. The occurrence is located in willow riparian woodland at an elevation of 1,258 feet. Successful nesting was documented in 2006. Google Earth images show undisturbed habitat at that location and the occurrence is presumed extant.

Occurrence 115 is approximately 7.1 miles northeast of the Project site. The occurrence is located in a small grove of trees associated with a rural residence in Winchester, north of Diamond Valley Lake. Agricultural fields are also present in the area. Successful nesting was documented in 2005 and 2006. Google Earth images show trees and agricultural fields remain in the area, as described in the CNDDB record. The occurrence is presumed extant.

Two white-tailed kites were observed on the Project site in 2005 and one in 2011 (Table 6, Figure 9). No kites have been observed during more recent surveys. Although this species may forage on the Project site and potentially suitable nesting habitat is present, no nesting has been observed there. A raptor nest was present in a eucalyptus tree in the riparian area on the site but has been observed during surveys to be either inactive or potentially associated with red-tailed hawk (*Buteo jamaicensis*) nesting. The 2021 survey found that this nest is no longer present.



Numbers refer to the CNDDB Element Occurrence.

Fairy Shrimp

The two listed fairy shrimp species known from the area are vernal pool fairy shrimp (*Branchinecta lynchi*), a federally listed threatened species, and Riverside fairy shrimp (*Streptocephalus woottoni*), a federally listed endangered species. Both species are covered by the MSHCP and surveys are required where suitable habitat is present.

Vernal pool fairy shrimp is restricted to seasonal pools and prefers cool-water pools that are often short lived. Riverside fairy shrimp is restricted to deep seasonal vernal pools, ephemeral ponds, stock ponds, and other human-modified depressions. Riverside fairy shrimp prefers warm-water pools that remain filled for extended periods of time (Dudek 2003).

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys. No fairy shrimp or potential fairy shrimp habitat was observed during current or previous surveys.

Riparian Birds

Least Bell's vireo (*Vireo bellii pusillus*) is state and federally listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species is migratory and breeds in California, arriving in March and departing by September or October. Males establish and defend territories in riparian woodlands and riparian scrub. Territory size ranges from 0.5 to 7.5 acres (USFWS 1998). Dense shrub cover is required for nesting.

There are two (2) CNDDB documented occurrences of nesting least Bell's vireo within five (5) miles of the site. The closest is Element Occurrence (EO) #412, located along the San Jacinto River just south of Canyon Lake, 4.2 miles to the west-northwest of the site. This occurrence is from 2002 and documents one (1) least Bell's vireo territory.

EO #407 is 4.5 miles west-northwest of the site along the San Jacinto River east of Lake Elsinore. This occurrence had one least Bell's vireo territory in 2003, two territories in 2004 and 2005, one singing male in 2006, six territories and two pairs with fledglings in 2009, and nine territories in 2010.

Southwestern willow flycatcher (*Empidonax traillii extimus*) is state and federally listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species inhabits dense riparian forests with ample numbers of willows and other associated trees and shrubs.

Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*) is federally listed as threatened and state listed as endangered. It is a covered species under the MSHCP and considered adequately conserved, but surveys are required in suitable habitat as described in MSHCP Section 6.1.2 and mitigation is required if the species is present. This species inhabits extensive riparian thickets or forests with dense, low-level or understory foliage and abutting on slow-moving watercourses, backwaters, or seeps.

There are no CNDDB documented occurrences of nesting southwestern willow flycatcher or western yellow-billed cuckoo within five (5) miles of the site.

The habitat assessment found that riparian vegetation on the site is distributed intermittently along a linear area that is approximately 1,500-feet long (Figure 7). The riparian area is no more than two or three shrubs across at its widest points and surrounded by agricultural fields. The understory is poorly developed and has several introduced species. Representative photos are included in Appendix D.

No least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo have been incidentally detected during surveys. Riparian vegetation onsite is scattered and degraded, the understory is poorly developed, and the streambed does not have persistent water flow. Typical habitat to support least Bell's vireo, southwestern willow flycatcher, and yellow-billed cuckoo is not present and these species are considered absent from the site.

Quino Checkerspot Butterfly

Quino checkerspot butterfly (*Euphydryas editha quino*) is federally listed as endangered. No adults, larvae, or pupae were observed onsite during focused surveys in 2004, although potentially suitable habitat and larval host and nectaring plant species are present. This species has not been incidentally observed during any subsequent surveys. Quino checkerspot butterfly is a covered species under the MSHCP and considered adequately conserved. Focused surveys are not required by the MSHCP.

3.4.2) Special Status Wildlife

In addition to coastal California gnatcatcher and white-tailed kite, discussed above, biological surveys conducted on the Project site by L&L from 2003 to 2021 detected 19 special status wildlife species on the site:

- orange-throated whiptail (*Aspidoscelis hyperythra*; CDFW Watch List),
- coastal (western) whiptail (*Aspidoscelis tigris stejnegeri*; CDFW Species of Special Concern),
- coast horned lizard (*Phrynosoma blainvillii*; CDFW Species of Special Concern),
- Cooper's hawk (*Accipiter cooperi*; CDFW Watch List),
- southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*; CDFW Watch List species),
- great egret (*Ardea alba*; CDFW Special Animal),
- great blue heron (fly over) (*Ardea herodias*; CDFW Special Animal),
- Bell's sage sparrow (*Artemisiospiza belli belli*; USFWS Bird of Conservation Concern, CDFW Watch List species),
- burrowing owl (*Athene cunicularia*, USFWS Bird of Conservation Concern, CDFW Species of Special Concern),
- Costa's hummingbird (*Calypte costae*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- wrentit (*Chamaea fasciata*; USFWS Bird of Conservation Concern),
- northern harrier (*Circus cyaneus*; CDFW Species of Special Concern),
- Nuttall's woodpecker (*Dryobates nuttallii*; USFWS Bird of Conservation Concern),
- California horned lark (*Eremophila alpestris actia*; CDFW Watch List),
- loggerhead shrike (*Lanius ludovicianus*; USFWS Bird of Conservation Concern, CDFW Species of Special Concern),
- rufous hummingbird (*Selasphorus rufus*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- Lawrence's goldfinch (*Spinus lawrencei*; USFWS Bird of Conservation Concern, CDFW Special Animal),
- California thrasher (*Toxostoma redivivum*; USFWS Bird of Conservation Concern), and
- San Diego black-tailed jackrabbit (*Lepus californicus bennettii*; CDFW Species of Special Concern).

All of these species are covered under the MSHCP and considered adequately conserved, with the exception of great egret, Costa's hummingbird, wrentit, Nuttall's woodpecker, rufous hummingbird, Lawrence's goldfinch, and California thrasher, which are not covered under the MSHCP. Burrowing owl is discussed below. Special status species observations are listed in Table 6 and mapped on Figure 9.

Five (5) additional special status wildlife species have a low to moderate potential to occur on the Project site but have not been observed during L&L surveys (see Appendix B). These species are:

- Crotch bumble bee (*Bombus crotchii*; CDFW Special Animal[2]),
- southern California legless lizard (*Anniella stebbinsi*; CDFW Species of Special Concern),
- Dulzura pocket mouse (*Chaetodipus californicus femoralis*; CDFW Species of Special Concern),
- northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*; CDFW Species of Special Concern), and
- western mastiff bat (foraging) (*Eumops perotis californicus*; CDFW Species of Special Concern).

Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP.

Burrowing Owl

Burrowing owl (*Athene cunicularia*) is protected under the federal Migratory Bird Treaty Act and California Fish and Game Code and is a CDFW Species of Special Concern. It is a small, ground-dwelling owl found in open dry grassland, desert, or shrubland areas and in uncultivated agricultural areas, rangelands, and other open areas with low-growing vegetation.

Burrows are an essential element of burrowing owl habitat. Although the burrowing owl is capable of excavating its own burrows in soft soils, it typically modifies and inhabits abandoned

[2] Crotch bumble bee was previously a candidate for state listing, but the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act: *Almond Alliance of California v. California Department of Fish and Wildlife*, Sacramento Superior Court No. 34-2019-80003216 (Nov. 13, 2020). The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations.

burrows of small mammals, such as ground squirrels and pocket gophers. The burrowing owl has also been known to use man-made structures such as cement culverts, debris piles, and other artificial burrows.

Occupancy of burrowing owl habitat can be verified at a site by observation of at least one (1) owl or sign of owl (molted feathers, cast pellets, prey remains, eggshell fragments, or excrement) at or near a burrow entrance. A site is considered occupied if at least one (1) owl has been identified onsite in the past three (3) years, because (if undisturbed) burrowing owls exhibit high site fidelity (CDFG 2012, CBOC 1993).

The site has suitable burrowing owl habitat. Focused surveys for burrowing owl in 2005, 2006, 2007, 2011, and 2013 did not detect burrowing owls utilizing the site. No burrowing owl or sign was observed during 2017 general biological surveys.

Focused surveys in 2018 observed a single adult burrowing owl onsite and one (1) burrow with signs of occupation (Table 6, Figure 9). The owl was observed on May 30, 2018. The occupied burrow was found very close to where the owl was observed. Pellets, scat, feathers, owl tracks, and pieces of shredded cloth were observed at the burrow entrance. The burrow was monitored during subsequent site visits, but there were no additional observations of burrowing owl adults or juveniles. It was not determined if the owl was using the burrow for nesting. Coyote and/or dog tracks were observed around the burrow, but the burrow itself was not disturbed and there were no signs that owls had been predated. No other active burrows or burrowing owls were observed during surveys in 2018.

Focused surveys in 2019 did not detect any burrowing owl, occupied burrows, or owl sign. The agricultural fields on the site, including the site of the 2018 burrow observation, had tall, dense non-native vegetation at that time, which created unsuitable conditions for burrowing owl. Thick vegetation was also present at the burrow site in 2021, until the agricultural fields were mowed (sometime between August and November surveys).

No burrowing owls, owl sign (pellets, scat, feathers, tracks, etc.), or occupied burrows were observed onsite during the 2021 protocol breeding season survey. No owls or owl sign were observed at the 2018 burrow site in November 2021 after the agricultural fields were mowed. Potentially suitable burrowing owl habitat is present on the site, including small mammal burrows. Potentially suitable habitat is also present within the 150-meter buffer area (Figure 5), but no owls, owl sign, or occupied burrows were observed in the buffer.

There are 47 CNDDB documented occurrences of burrowing owl within five (5) miles of the Project site (CDFW 2021c). These occurrences date between 1998 and 2016.

Because suitable habitat is present, the MSHCP requires a preconstruction clearance survey for burrowing owl within 30 days prior to the start of site disturbance. If burrowing owls are found on the site at that time, additional mitigation is required under the MSHCP (see Section 6.10).

Nesting Birds

There is habitat suitable for nesting birds (including raptors) within and adjacent to the site. Nesting birds may utilize trees, shrubs, and other vegetation, and open ground on and adjacent to the site for nesting. Some relatively large eucalyptus trees are present on the western portion of the site and along the western boundary along Evans Road. Red-tailed hawks (*Buteo jamaicensis*) have been observed onsite and may be utilizing the trees for nesting.

A potential (inactive) raptor nest site was found in a large eucalyptus tree on the site in 2013. It was located in a eucalyptus tree in the west-central portion of the site (Table 6, Figure 9). No raptors were observed utilizing the nest site during surveys in 2013, 2017, 2018, and 2019. The 2021 survey found that the nest was no longer present and likely fell from the tree.

3.4.3) Wildlife Corridor

Wildlife corridors link together areas of suitable wildlife habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated “islands” of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because movement barriers prohibit the infusion of new individuals and genetic variation.

Wildlife movement activities usually fall into one of three movement categories: dispersal (e.g., juvenile animals dispersing from natal areas or individuals extending their range), seasonal migration, and movements related to home range activities (e.g., foraging for food or water, defending territories, or searching for mates, breeding areas, or cover).

Drainages often serve as wildlife corridors and travel routes; however, the riparian vegetation on the site is not continuous. The site is largely surrounded by scattered existing development and

there is no connectivity between the site and conserved lands to the east (Diamond Valley Lake) and southwest (Santa Rosa Plateau, Cleveland National Forest).

The California Essential Habitat Connectivity Project (CDFW 2021d) maps the Project site and surrounding areas as "limited connectivity opportunity." Although there may be limited local movement of wildlife on and across the site, it is not within or adjacent to a wildlife corridor or potential corridor.

3.5) Jurisdictional Waters/Wetlands and MSHCP Riparian/Riverine and Vernal Pool Habitat

Under MSHCP Volume 1, Section 6.1.2, areas associated with wetland and streambed systems must be evaluated for consideration as riparian/riverine or vernal pool habitat. Riparian/riverine areas are defined within the MSHCP as:

> ". . . lands which contain Habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year."

Vernal pools are defined within the MSHCP as:

> ". . . seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. . ."

An ephemeral drainage is present on the site and mapped as a USGS blue-line stream (Figure 11). This drainage includes riparian vegetation such as arroyo willow, Fremont cottonwood, and mulefat (see Section 3.2.3). A jurisdictional delineation was completed in 2011 and updated in 2018 and 2019.

The delineation found 0.43 acre of unvegetated state streambed (which is also MSHCP riverine habitat) and 0.93 acre of state wetland (which is also MSHCP riparian habitat). The survey also identified 0.10 acre of federal Waters of the U.S. (WoUS), none of which is federal wetland (Table 7).

All jurisdictional areas onsite will either be impacted by Project development or incorporated into the Avoidance/Compatible Use Area (Figure 12). The Avoidance/Compatible Use Area will retain native riparian habitat.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

Table 7. Summary of Jurisdictional Resources Present

4.0) URBAN WILDLANDS INTERFACE ANALYSIS

The Project proposes an Avoidance/Compatible Use Area along the riparian area on the site as well as an Open Space Area in the northeast corner of the site. An Urban Wildlands Interface Analysis is included here in case the MSHCP requires implementation of the Urban Wildlands Interface Guidelines (Section 6.1.4 of the MSHCP). If these areas are not conserved and/or the Urban Wildlands Interface Guidelines are not applicable, this section will be withdrawn.

The main portion of the Avoidance/Compatible Use Area will be a channel about five (5) feet deep with 4:1 slopes. At the south end is a smaller portion that will be contoured as a basin about five (5) feet deep with 4:1 slopes. Offsite flows from the south will be picked up by v-ditches along the tract boundary and the ditches will convey the flows to this basin. Water will flow from the basin underneath an internal street and into the main portion of the Avoidance/Compatible Use Area through a box culvert. The Avoidance/Compatible Use Area will retain native riparian habitat.

The Avoided Area and Open Space Area will be owned and maintained by the Homeowners Association (HOA) according to HOA guidelines.

4.1) Drainage

Runoff from the development will be treated in water quality basins to remove common pollutants and reduce peak flows before being discharged into the Avoidance/Compatible Use Area.

During construction, all contractors and subcontractors will use Best Management Practices (BMPs) to manage, capture, control, eliminate, and prevent sediment, debris, and pollutants from being discharged into streambeds and drainages. A Storm Water Pollution Prevention Plan (SWPPP) has been prepared for the Project. Construction BMPs address sediment and erosion control, non-sediment pollutants, and non-storm water BMPs.

If grading occurs when the ephemeral streambed is wetted, a bypass will be required. A Bypass Plan will be developed by the SWPPP consultant prior to initiation of grading unless all grading can occur when the ephemeral streambed is dry.

Post-construction BMPs include minimizing urban runoff, minimizing the impervious footprint, conserving natural areas, and minimizing Directly Connected Impervious Areas (DCIAs). Project plans incorporate BMPs to address water quality in low flows and first flush storm runoff,

as well as to control post-construction peak flow volumes. These BMPs will include a combination of water quality, detention, infiltration and/or sand filter basins as needed to adequately treat runoff.

4.2) Toxics

Land uses proposed that use chemicals that are potentially toxic, or that may adversely affect wildlife species, habitat, or water quality shall incorporate measures to ensure that application of such chemicals does not result in discharge to the Avoidance/Compatible Use Area and downstream drainages. The greatest risk is from landscaping fertilizer and herbicide/pesticide runoff. The water quality basins, as discussed above, will reduce expected runoff of toxic chemicals entering the wetland area and adjoining drainages downstream.

Information will be distributed to homeowners in an educational package requesting minimal application of chemicals to yards and prevention of runoff through adjustment of sprinklers to prevent overwatering and overspray resulting in nuisance water and low flow dry season urban runoff.

Signage will be placed on storm drains throughout the community stating: “Nothing but rain in the drains.” Information on the importance of not dumping chemicals, animal waste, and debris into the street will be distributed to homeowners via the Home Owners Association (HOA) at the point of sale or by the managing authority.

4.3) Fencing

The siting and design of fencing should not impede wildlife movement. Given the location of the Avoidance/Compatible Use Area within the residential development, wildlife using the site are likely to be common species that are comfortable with proximity to human disturbance.

The Project boundary and back and side yards will be fenced according to a fencing plan approved by the lead agency. No direct access between residences and the Open Space Area or the Avoidance/Compatible Use Area will occur or be allowed.

Mitigation Measure 4.3-7 in the 2006 EIR requires individual lot fencing to be used to restrict access to the on-site wetland areas. Back yard gates from individual residential lots that open onto the wetland area shall be prohibited.

4.4) Barriers

Proposed land uses adjacent to the Avoidance/Compatible Use Area and Open Space Area shall incorporate barriers in Project designs, where appropriate, to minimize unauthorized public access, domestic animal predation, illegal trespass, or trash dumping. Such barriers may include native landscaping, rocks/boulders, fencing, walls, signage, and/or other appropriate mechanisms.

The Project will install two (2) or more information boards (to be located at each end of the Avoidance/Compatible Use Area and at other access points, as needed) providing a description of suitable uses and asking residents to remain on existing trails and to keep pets on a leash.

4.5) Lighting

Night lighting shall be directed away from the Avoidance/Compatible Use Area and Open Space Area to protect species from direct night lighting. Shielding shall be incorporated in Project designs to ensure ambient lighting in the Avoidance/Compatible Use Area and Open Space Area is not substantially increased.

Mitigation Measure 4.3-8 in the 2006 EIR requires that night lighting during and after project construction shall be directed away from onsite wetland areas and, except for safety and other requirements, lighting shall be limited from the boundaries of onsite wetland areas. In the event that lighting in an area adjacent to the wetland area is necessary, a shield shall be incorporated in Project designs to ensure ambient lighting in the wetland area is not increased.

4.6) Noise

Proposed noise-generating land uses affecting the Avoidance/Compatible Use Area and Open Space Area shall incorporate setbacks, berms, or walls to minimize the effects of noise on wildlife resources pursuant to applicable rules, regulations, and guidelines related to land use noise standards.

4.7) Invasives

Invasive species (refer to MSHCP Table 6-2, below) shall not be used in development or restoration plan activities. Mitigation Measure 4.3-9 in the 2006 EIR requires that the landscape plans for the Project in areas adjacent or tributary to wetland areas shall not include those species listed in the MSHCP as “Plants That Should Be Avoided Adjacent to The MSHCP Conservation Area” (MSHCP Table 6-2).

4.8) Grading/Land Development

Manufactured slopes will be required to extend into the Avoidance/Compatible Use Area to support the Project design. Grading should not extend into the Open Space Area.

4.9) Weed Abatement/Fuel Modification

Weed abatement and fuel modification zones were considered in the determination of habitat impacts. Weed abatement and fuel modification zone would not encroach into portions of the Open Space Area and have been excluded from the Avoidance/Compatible Use Area.

MSHCP Table 6-2. Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area (Taken Directly from MSHCP Section 6.1.4)

BOTANICAL NAME	COMMON NAME
Acacia spp. (all species)	acacia
Achillea millefolium var. *millefolium*	common yarrow
Ailanthus altissima	tree of heaven
Aptenia cordifolia	red apple
Arctotheca calendula	cape weed
Arctotis spp. (all species & hybrids)	African daisy
Arundo donax	giant reed or arundo grass
Asphodelus fistulosus	asphodel
Atriplex glauca	white saltbush
Atriplex semibaccata	Australian saltbush
Carex spp. (all species*)	sedge
Carpobrotus chilensis	ice plant
Carpobrotus edulis	sea fig
Centranthus ruber	red valerian
Chrysanthemum coronarium	annual chrysanthemum
Cistus ladanifer (incl. hybrids/varieties)	gum rockrose
Cortaderia jubata [*syn.C. Atacamensis*]	jubata grass, pampas grass
Cortaderia dioica [syn. *C. sellowana*]	pampas grass
Cotoneaster spp. (all species)	cotoneaster
Cynodon dactylon (incl. hybrids varieties)	Bermuda grass
Cyperus spp. (all species*)	nutsedge, umbrella plant
Cytisus spp. (all species)	broom
Delosperma 'Alba'	white trailing ice plant
Dimorphotheca spp. (all species)	African daisy, Cape marigold
Drosanthemum floribundum	rosea ice plant
Drosanthemum hispidum	purple ice plant
Eichhornia crassipes	water hyacinth
Elaegnus angustifolia	Russian olive
Eucalyptus spp. (all species)	eucalyptus or gum tree
Eupatorium coelestinum [syn. *Ageratina* sp.]	mist flower
Festuca arundinacea	tall fescue
Festuca rubra	creeping red fescue
Foeniculum vulgare	sweet fennel
Fraxinus uhdei (and cultivars)	evergreen ash, shamel ash
Gaura (spp.) (all species)	gaura
Gazania spp. (all species & hybrids)	gazania
Genista spp. (all species)	broom
Hedera canariensis	Algerian ivy
Hedera helix	English ivy
Hypericum spp. (all species)	St. John's Wort
Ipomoea acuminata	Mexican morning glory
Lampranthus spectabilis	trailing ice plant
Lantana camara	common garden lantana
Lantana montevidensis [syn. *L. sellowiana*]	lantana
Limonium perezii	sea lavender
Linaria bipartita	toadflax
Lolium multiflorum	Italian ryegrass
Lolium perenne	perennial ryegrass
Lonicera japonica (incl. 'Halliana')	Japanese honeysuckle
Lotus corniculatus	birdsfoot trefoil

MSHCP Table 6-2. Plants That Should Be Avoided Adjacent to the MSHCP Conservation Area (Continued)

BOTANICAL NAME	COMMON NAME
Lupinus arboreus	yellow bush lupine
Lupinus texanus	Texas blue bonnets
Malephora crocea	ice plant
Malephora luteola	ice plant
Mesembryanthemum nodiflorum	little ice plant
Myoporum laetum	myoporum
Myoporum pacificum	shiny myoproum
Myoporum parvifolium (incl. 'Prostratum')	ground cover myoporum
Oenothera berlandieri	Mexican evening primrose
Olea europea	European olive tree
Opuntia ficus-indica	Indian fig
Osteospermum spp. (all species)	trailing African daisy, African daisy,
Oxalis pes-caprae	Bermuda buttercup
Parkinsonia aculeata	Mexican palo verde
Pennisetum clandestinum	Kikuyu grass
Pennisetum setaceum	fountain grass
Phoenix canariensis	Canary Island date palm
Phoenix dactylifera	date palm
Plumbago auriculata	cape plumbago
Polygonum spp. (all species)	knotweed
Populus nigra 'italica'	Lombardy poplar
Prosopis spp. (all species*)	mesquite
Ricinus communis	castorbean
Robinia pseudoacacia	black locust
Rubus procerus	Himalayan blackberry
Sapium sebiferum	Chinese tallow tree
Saponaria officinalis	bouncing bet, soapwart
Schinus molle	Peruvian pepper tree, California pepper
Schinus terebinthifolius	Brazilian pepper tree
Spartium junceum	Spanish broom
Tamarix spp. (all species)	tamarisk, salt cedar
Trifolium tragiferum	strawberry clover
Tropaelolum majus	garden nasturtium
Ulex europaeus	prickly broom
Vinca major	periwinkle
Yucca gloriosa	Spanish dagger

An asterisk (*) indicates some native species of the genera exist that may be appropriate.

5.0) SUMMARY AND RECOMMENDATIONS

The purpose of this study was to identify biological resources present or potentially present on the site. The MSHCP requires a habitat assessment to address riparian/riverine and vernal pool habitats and associated species and burrowing owl. Focused surveys are required if suitable habitat is present.

L&L also analyzed the potential for impacts to state and federal jurisdictional waters, special status species, and sensitive vegetation communities. The recommendations are based on the literature review, L&L's knowledge of species and habitats in the region, the biological field survey, and analysis of aerial images.

MSHCP

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of PQP Conserved Lands approximately 0.68 miles north-northeast of the site (Ringing Rock Archaeological Site). There are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

Sensitive Vegetation Communities

The site is composed of agricultural lands and disturbed/ruderal areas, California buckwheat scrub, chamise chaparral, arroyo willow thickets, and mulefat thickets. Arroyo willow thickets and mulefat thickets are riparian vegetation communities and arroyo willow thicket is considered sensitive. The majority of arroyo willow thicket will be retained in the Avoidance/Compatible Use Area.

Listed and Special Status Plant Species

No state or federally listed plants were observed during surveys and the Project site is not within USFWS designated critical habitat for any listed plant species. Two special status plant species were observed on the site during surveys, long-spined spineflower and southern California black walnut. Both are covered species under the MSHCP and considered adequately conserved.

Trees

There is a single immature coast live oak tree present on the site within the riparian area. Other native and non-native trees are also present. The City may regulate removal or replacement of trees and a tree survey may be required.

Listed and Fully Protected Wildlife Species

Surveys detected two listed or fully protected wildlife species on the site, coastal California gnatcatcher and white-tailed kite.

Multiple surveys from 2004 through 2021 have documented coastal California gnatcatchers on the Project site, including observations of breeding pairs and nesting. All observations were in the California buckwheat scrub habitat in the northeastern portion of the site. Under Mitigation Measure 4.3-1 of the 2006 EIR, the northeastern portion of the property shall be preserved as open space and covered by a conservation easement or similar mechanism. Coastal California gnatcatcher is a covered species under the MSHCP and considered adequately conserved. Focused surveys for this species are not required under the MSHCP. Scheduling Project activities outside the nesting season and/or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended, as described below. Monitoring of active nest sites during Project activities is recommended.

Two white-tailed kites were observed on the Project site in 2005 and one in 2011. No kites have been observed during more recent surveys. Although this species may forage on the Project site and potentially suitable nesting habitat is present, no nesting has been observed there. White-tailed kite is a covered species under the MSHCP and considered adequately conserved.

Under Mitigation Measure 4.3-5 of the 2006 EIR, if construction activities occur between January 1 and September 15 and within 150 feet of suitable nesting locations, a focused raptor survey will be required prior to issuance of grading permits. If active nests are located within the portion of the site to be disturbed or within 150 feet of the area to be disturbed, measures shall be initiated to avoid any impacts to nesting raptors, including avoidance buffers around active nests. Under this mitigation measure, if white-tailed kite nesting is found on the Project site, an incidental take permit from CDFW is required.

Two other listed species have not been observed on the Project site during surveys but have a moderate or high potential to occur, Stephens' kangaroo rat and tricolored blackbird (foraging).

Stephens' kangaroo rat is a covered species under the MSHCP and considered adequately conserved. Focused trapping surveys for this species are not required by the MSHCP. Tricolored blackbird is also a covered species under the MSHCP and considered adequately conserved.

Fairy Shrimp

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys. No fairy shrimp or potential fairy shrimp habitat was observed during current or previous surveys.

Riparian Birds

No least Bell's vireo, southwestern willow flycatcher, or western yellow-billed cuckoo have been incidentally detected during surveys. Riparian vegetation onsite is scattered and degraded, the understory is poorly developed, and the streambed does not have persistent water flow. Typical habitat to support least Bell's vireo, southwestern willow flycatcher, and yellow-billed cuckoo is not present and these species are considered absent from the site.

Quino Checkerspot Butterfly

No Quino checkerspot butterfly adults, larvae, or pupae were observed onsite during focused surveys in 2004, although potentially suitable habitat and larval host and nectaring plants are present. This species has not been incidentally observed during any subsequent surveys. Quino checkerspot butterfly is a covered species under the MSHCP and considered adequately conserved. Focused surveys are not required by the MSHCP.

Special Status Wildlife Species

Biological surveys from 2003 to 2021 detected 19 special status wildlife species on the site: orange-throated whiptail, coastal (western) whiptail, coast horned lizard, Cooper's hawk, southern California rufous-crowned sparrow, great egret, great blue heron (fly over), Bell's sage sparrow, burrowing owl, Costa's hummingbird, wrentit, northern harrier, Nuttall's woodpecker, California horned lark, loggerhead shrike, rufous hummingbird, Lawrence's goldfinch, California thrasher, and San Diego black-tailed jackrabbit.

All of these species are covered under the MSHCP and considered adequately conserved, with the exception of great egret, Costa's hummingbird, wrentit, Nuttall's woodpecker, rufous

hummingbird, Lawrence's goldfinch, and California thrasher, which are not covered under the MSHCP. Burrowing owl is discussed below. Scheduling Project activities outside the nesting season or conducting preconstruction nesting bird clearance surveys and establishing avoidance buffers around any active nests is recommended, as described below.

Five (5) additional special status wildlife species have not been observed on the Project site during L&L surveys but have a low to moderate potential to occur. These species are Crotch bumble bee, southern California legless lizard, Dulzura pocket mouse, northwestern San Diego pocket mouse, and western mastiff bat (foraging). Northwestern San Diego pocket mouse is covered under the MSHCP and considered adequately conserved. The remaining four species are not covered under the MSHCP.

Crotch bumble bee was previously a candidate for state listing, but in November 2020 the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act. The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations. If Crotch bumble bee becomes a listed or candidate species, focused surveys and incidental take permitting may be required.

Burrowing Owl

One (1) adult burrowing owl and an occupied burrow were observed onsite in 2018. No owls or owl sign were observed in 2019 or 2021. Because suitable habitat is present, the MSHCP requires a preconstruction clearance survey for burrowing owl within 30 days prior to the start of site disturbance. If burrowing owls are found on the site at that time, additional mitigation is required under the MSHCP and Mitigation Measure 4.3-2 of the 2006 EIR.

Nesting Birds

There is habitat suitable for nesting birds (including raptors) within and adjacent to the site. Nesting birds may utilize trees, shrubs, and other vegetation, and open ground on and adjacent to the site for nesting.

Nesting birds are protected under state and federal laws. Project activities, including initial vegetation trimming/clearing, tree trimming/removal, ground disturbance, etc., should be avoided during the nesting season (generally January 1 to September 15). If the nesting season cannot be avoided, a nesting bird clearance survey is recommended within three (3) days prior to the start of Project activities within the nesting season. If active nests are present,

avoidance of nest sites is required and a buffer of 300 to 500 feet (or as determined by a biologist) is recommended until a biologist has verified that juvenile birds are no longer dependent on the nest or the nest has otherwise become inactive. An active nest is defined as a nest with eggs, chicks, or dependent juveniles, or a nest actively being constructed or utilized for reproduction.

Wildlife Corridors

The site is largely surrounded by scattered existing development and there is no connectivity between the site and conserved lands to the east and southwest. Although there may be limited local movement of wildlife on and across the site, it is not within or adjacent to a wildlife corridor or potential corridor.

Jurisdictional Waters/Wetlands and MSHCP Riparian/Riverine and Vernal Pool Habitat

An ephemeral drainage with scattered riparian vegetation is present on the site and mapped as a USGS blue-line stream. A jurisdictional delineation found 0.43 acre of unvegetated state streambed (which is also MSHCP riverine habitat) and 0.93 acre of state wetland (which is also MSHCP riparian habitat). The survey also identified 0.10 acre of federal waters. There is no federal wetland.

All jurisdictional areas onsite will either be impacted by Project development or incorporated into the Avoidance/Compatible Use Area. Areas of the property that cannot be avoided and will be impacted by planned development include 9,541 sq. ft. (0.22 acre) of MSHCP riverine habitat and 5,702 sq. ft. (0.13 acre) of MSHCP riparian habitat. Areas that are avoided by the Project and contain MSHCP riparian/riverine habitat include 9,273 sq. ft. (0.21 acre) of MSHCP riverine habitat and 34,749 sq. ft. (0.80 acre) of MSHCP riparian habitat that will be retained onsite in an Avoidance/Compatible Use Area. Monitoring of Project activities adjacent to the Avoidance/Compatible Use Area is recommended.

Pools or depressions characteristic of vernal habitat were not observed on the site and no wetland or vernal pool plant species were present. No evidence of ponding areas (i.e., cracked soils, tire ruts, etc.) were observed on the site during surveys.

Regulatory permits from USACE, RWQCB, and CDFW will be required for impacts to jurisdictional areas. A DBESP will be required for impacts to MSHCP riparian/riverine habitat. Mitigation Measure 4.3-6 also requires on or off-site replacement of CDFW and federal jurisdictional waters and wetlands at a ratio of no less than 1:1 and incorporation of design

features that will avoid biological impacts to offsite blue-line streams that flow to Canyon Lake. Monitoring of Project activities that disturb vegetation or soil in and adjacent to the Avoidance/Compatible Use Area is recommended.

6.0) REGULATORY ENVIRONMENT

The following summary of the regulatory environment is provided for information purposes and is not intended for review or comment by the lead or wildlife agencies.

6.1) Federal Endangered Species Act

Section 9 of the federal Endangered Species Act (FESA), 1973 (as amended) prohibits "take" of federally listed threatened and endangered species. Candidate species receive no protection under FESA, but the USFWS encourages conservation of these species. "Take" is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. "Harm" is further defined to include habitat modification or degradation when it actually kills or injures wildlife by impairing essential behavioral patterns including breeding, feeding, or sheltering.

Incidental take is take that results from, but is not the purpose of, carrying out an otherwise lawful activity. Incidental take of federally listed species may be authorized under Section 7 of FESA for federal properties or where federal actions (i.e., federal permitting or federal funding) are involved or under Section 10 of FESA for non-federal actions.

Section 7 requires all Federal agencies, in "consultation" with the USFWS, to ensure that their actions are not likely to jeopardize the continued existence of listed species or result in destruction or adverse modification of critical habitat. The Section 7 process requires preparation of a federal Biological Assessment to determine whether a proposed major construction activity under the authority of a Federal action agency is likely to adversely affect listed species, proposed species, or designated critical habitat. After formal consultation, the USFWS will issue a Biological Opinion stating whether or not a federal action is likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of critical habitat.

Section 10 lays out the guidelines under which a permit may be issued to authorize take of endangered or threatened species (in the absence of any federal nexus). Application for an incidental take permit under Section 10 is subject to certain requirements, including preparation by the permit applicant of a conservation plan, generally known as a "Habitat Conservation Plan" or "HCP." An HCP is a plan that outlines ways of maintaining, enhancing, and protecting a given habitat type needed to protect species. The plan usually includes measures to minimize

impacts, such as provisions for permanently protecting land, restoring habitat, and relocating plants or animals to another area.

6.2) Jurisdictional Waters and Wetlands

Three agencies generally regulate activities within streams, wetlands, and riparian areas in California: (1) the U.S. Army Corps of Engineers (USACE) regulates activities under Section 404 of the federal Clean Water Act; (2) the Regional Water Quality Control Board (RWQCB) regulates activities under Section 401 of the federal Clean Water Act and the State Porter-Cologne Water Quality Control Act; and (3) the California Department of Fish and Wildlife (CDFW) regulates activities under California Fish and Game Code Sections 1600-1616.

6.2.1) Federal Clean Water Act, Section 404

Section 404 of the federal Clean Water Act applies to "Waters of the United States" (WoUS). By definition these include waterways that could be used for interstate commerce and their tributaries, including any waters that flow into traditional navigable waters. In non-tidal waters, the limits of jurisdiction are "ordinary high water marks" (OHWM) such as stream banks.

There have been recent changes to the definition of WoUS and the agencies are interpreting WoUS consistent with the pre-2015 regulatory regime until further notice. Under this rule, WoUS includes:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

2. All interstate waters including interstate wetlands;

3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:

    a. Which are or could be used by interstate or foreign travelers for recreational or other purposes; or

    b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or

c. Which are used or could be used for industrial purposes by industries in interstate commerce;

4. All impoundments of waters otherwise defined as waters of the United States under this definition;

5. Tributaries of waters identified in paragraphs (s)(1) through (4) of this section;

6. The territorial sea;

7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (s)(1) through (6) of this section; waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.11(m) which also meet the criteria of this definition) are not waters of the United States.

Final determination and delineation of federal jurisdiction is made by the USACE and not by the project biologists. Therefore, fieldwork and documentation of the site conditions are done as a preliminary delineation until the USACE reviews and concurs with the results.

6.2.2) Federal Clean Water Act, Section 401 and Porter-Cologne

The RWQCB has jurisdiction over wetlands, WoUS, and Waters of the State under Section 401 of the CWA and the Porter-Cologne Water Quality Control Act (Porter-Cologne) under the California Water Code (§ 13000, et seq.) Permitting is required for activities that will result in a discharge of soils, nutrients, chemicals, detrital materials, or other pollutants into WoUS, Waters of the State, or adjacent wetlands that will affect the water quality of those bodies and the watershed.

6.2.3) California Fish and Game Code, Section 1600

The CDFW, through provisions of the California Fish and Game Code (Sections 1600-1616), is empowered to issue agreements ("Lake and Streambed Alteration Agreements") for projects that will adversely affect wildlife habitat associated with any river, stream, or lake edges. The Lake and Streambed Alteration Agreement will typically include required measures to mitigate impacts.

Sections 1600-1616 of the California Fish and Game Code apply to stream channels, defined elsewhere in the Code as follows:

"A stream is a body of water that flows at least periodically through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation."

The state definition does not specify a flow rate or inundation frequency and provides no clear distinction between jurisdictional and non-jurisdictional lands.

While the federal USACE criteria (hydrology, soils, and vegetation) are used to evaluate the presence or absence of wetlands within the project site, the determination of state wetland status is not based on the combined presence of the three criterion because the state can take jurisdiction of any one of the three: (1) the presence of open water or saturated soils, (2) presence of vegetation including riparian or wetland species, and/or (3) water-modified or oxygen-depleted soils.

6.3) California Endangered Species Act

California Endangered Species Act (CESA) definitions of endangered and threatened species parallel those defined in the FESA. The CESA defines an endangered species as ". . . a native species or subspecies of a bird, mammal, fish, amphibian, reptile or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes including loss of habitat, change in habitat, over exploitation, predation, competition or disease." Endangered species are in serious danger of becoming extinct and threatened species are likely to become endangered species in the foreseeable future (according to Sections 2062 and 2067, respectively, of the California Fish and Wildlife Code). Candidate species are those under formal review by the CDFW for listing as endangered or threatened (Section 2067). Prior to being considered for protected status, the CDFW designates a species as being of special concern. Species of Special Concern are those for which the CDFW has information indicating population decline.

6.4) California Environmental Quality Act

The California Environmental Quality Act (CEQA) and CEQA Guidelines (§ 15000 et seq.) require identification of environmental effects from discretionary projects. Significant effects are to be mitigated by avoidance, minimization, rectification, or compensation whenever possible.

Effects to all state and federal listed species are considered significant under CEQA. In addition to formally listed species, CEQA considers effects to species that are demonstrably endangered or rare as important or significant. These definitions can include state designated species of

special concern, federal candidate and proposed species, California Natural Diversity Database (CNDDB) tracked species, and California Rare Plant Rank (CRPR) 1B and 2 plants.

Appendix G of the CEQA Guidelines specifically addresses biological resources and encompasses a broad range of resources to be considered.

6.5) California Natural Diversity Database

The California Natural Diversity Database (CNDDB) is a database that ranks overall condition of listed and special status species and sensitive vegetation communities on global (throughout its range) and state (within California) levels. The CNDDB includes documented occurrences of listed and special status species that have been reported to CDFW. State ranking is numerical, ranging from one to five (S1 to S5), with one indicating very few remaining individuals or little remaining habitat and five indicating a demonstrably secure to ineradicable population condition. State ranks (S ranks) may also include an extension (e.g., S1.x) indicating current threats ranging from one (very threatened) to three (no current threats known).

6.6) California Rare Plant Rank

The California Native Plant Society (CNPS) Inventory of Rare and Endangered Species includes documented occurrences of special status plant species that are available through the Consortium of California Herbaria and other sources. The CNPS, in coordination with CDFW, has cataloged California's rare and endangered plants into lists according to population distributions and viability. These lists are numbered and indicate the following California Rare Plant Ranks (CRPR): (1A) presumed extinct in California; (1B) rare, threatened, or endangered throughout their range; (2A) presumed extirpated in California, but more common in other states; (2B) threatened or endangered in California, but more common in other states; (3) more information is needed to establish rarity; and (4) plants of limited distribution in California (i.e., naturally rare in the wild), but whose populations do not appear to be susceptible to threat. A CRPR may also have an extension (e.g., 1B.x) that indicates current level of threat: seriously threatened (x.1), moderately threatened (x.2), or not very threatened (x.3).

6.7) Information for Planning and Consultation

The U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) is a database that includes federally listed endangered or threatened species and species proposed for listing, designated critical habitat, Birds of Conservation Concern, and other federally regulated lands and biological resources.

6.8) Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711) is an international treaty that made it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 CFR Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). Executive Order 13186 ensures that environmental analyses of federal actions required by the National Environmental Policy Act (NEPA) or other established environmental review processes evaluate the effects of actions on migratory birds, with emphasis on species of concern. Disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young) or loss of habitat upon which the birds depend could be considered "take."

6.9) California Fish and Game Code, Sections 3503 and 3513

California Fish and Game Code Section 3503 prohibits take, possession, or needless destruction of bird nests or eggs except as otherwise provided by the Code; Section 3503.5 prohibits take or possession of birds of prey or their eggs except as otherwise provided by the Code; and Section 3513 provides for the adoption of the provisions of the federal Migratory Bird Treaty Act, described above.

6.10) Western Riverside County Multiple Species Habitat Conservation Plan

The County of Riverside, including eight (8) additional land jurisdictions and 14 cities, have prepared a Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County. The MSHCP will build upon existing preserves and provide connectivity and wildlife corridors throughout the region. The MSHCP proposes to conserve approximately 500,000 acres and 146 different species.

The MSHCP was approved by the county on June 17, 2003 and an Implementation Agreement (IA) between the USFWS, the CDFW, and the County was executed and an associated USFWS Section 10(a)(1)(B) Permit (No. TE-088609) was issued on June 22, 2004. The permit grants take authorization for certain species identified in the permit as "Covered Species Adequately Conserved."

The MSHCP establishes seven (7) core reserve areas and associated linkages between proposed and existing core areas. The MSHCP divides these areas into Cells using USGS coordinates.

Focused surveys are required for species identified as not adequately conserved under the MSHCP if suitable habitat is present onsite. If focused surveys are determined necessary and species identified as not adequately conserved under the MSHCP occur onsite, the proponent may be required to undergo a Habitat Acquisition and Negotiation Strategy (HANS) determination with the County of Riverside. If a single-family home or mobile home is to be placed on an existing legal lot, permitting will be reviewed according to the procedures outlined in MSHCP Section 6.1.1, *Expedited Review Process for Single-Family Homes or Mobile Homes to Be Located on an Existing Lot within the Criteria Area*.

MSHCP Section 6.1.2 (Riparian/Riverine Habitat)

Section 6.1.2 of the MSHCP requires an assessment of the potentially significant effects of the proposed project on Riparian/riverine areas, and vernal pools as currently required by CEQA using available information augmented by project-specific mapping. Riparian/riverine areas and vernal pools are defined as follows:

- Riparian/riverine Areas are lands that have flow for all or a portion of the year and which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.

- Vernal pools are seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. The determination that an area exhibits vernal pool characteristics, and the definition of the watershed supporting vernal pool hydrology, must be made on a case-by case basis. Such determinations should consider the length of the time the area exhibits upland and wetland characteristics and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be obtained from its history, vegetation, soils, and drainage characteristics, uses, to which it has been subjected, and weather and hydrologic records.

With the exception of wetlands created for the purpose of providing wetlands habitat or resulting from human actions to create open waters or from the alteration of natural stream courses, areas demonstrating characteristics as described above which are artificially created are not included in these definitions.

Burrowing Owl

Section B (Species Accounts) of Volume 2 of the MSHCP (Dudek 2003) lists the following objectives for burrowing owl conservation/protection:

Objective 1

Include within the MSHCP Conservation Area at least 27,470 acres of suitable primary habitat for the burrowing owl including grasslands.

Objective 2

Include within the MSHCP Conservation Area at least 5 Core Areas and interconnecting linkages. Core areas may include the following: (1) Lake Skinner/Diamond Valley Lake area (Existing Core C plus Proposed Extension of Existing Cores 5, 6, 7; 29,060 acres); (2) playa west of Hemet (Proposed Noncontiguous Habitat Block 7; 1,250 acres); (3) San Jacinto Wildlife Area/Mystic Lake area including Lake Perris area (Existing Core H; 17,470 acres); (4) Lake Mathews (Existing Core C plus Proposed Extension of Existing Cores 2; 23,710 acres); and (5) along the Santa Ana River (9,670 acres). The Core Areas should support a combined total breeding population of approximately 120 burrowing owls with no fewer than five pairs in any one Core area.

Objective 3

Include within the MSHCP Conservation Area at least 22,120 acres of suitable secondary habitat for the burrowing owl including playas and vernal pools, and agriculture outside of the Core Areas identified above. Areas where additional suitable habitat could be conserved include west of the Jurupa Mountains, near Temescal Wash (i.e., vicinity of Alberhill), near Temecula Creek, within the Lakeview Mountains, Banning, the Badlands, Gavilan Hills, and Quail Valley.

Objective 4

Include within the MSHCP Conservation Area the known nesting locations of the burrowing owl at Lake Perris, Mystic Lake/San Jacinto Wildlife area, Lake Skinner area, the area around Diamond Valley Lake, playa west of Hemet, Lakeview Mountains, Lake Mathews/Estelle Mountain Reserve and Sycamore Canyon Regional Park.

Objective 5

Surveys for burrowing owl will be conducted as part of the project review process for public and private projects within the burrowing owl survey area where suitable habitat is present (see Burrowing Owl Survey Area Map, Figure 6-4 of the MSHCP, Volume I). The locations of this species determined as a result of survey efforts shall be conserved in accordance with procedures described within Section 6.3.2, MSHCP, Volume I and the guidance provided below:

Burrowing owl surveys shall be conducted utilizing accepted protocols as follows. If burrowing owls are detected on the project site then the action(s) taken will be as follows:

If the site is within the Criteria Area, then at least 90 percent of the area with long-term conservation value will be included in the MSHCP Conservation Area. Otherwise:

1) If the site contains, or is part of an area supporting less than 35 acres of suitable habitat or the survey reveals that the site and the surrounding area supports fewer than 3 pairs of burrowing owls, then the on-site burrowing owls will be passively or actively relocated following accepted protocols.

2) If the site (including adjacent areas) supports three or more pairs of burrowing owls, supports greater than 35 acres of suitable habitat and is non-contiguous with MSHCP Conservation Area lands, at least 90 percent of the area with long-term conservation value and burrowing owl pairs will be conserved onsite.

The survey and conservation requirements stated in this objective will be eliminated when it is demonstrated that Objectives 1 – 4 have been met.

Objective 6

Pre-construction presence/absence surveys for burrowing owl within the survey area where suitable habitat is present will be conducted for all Covered Activities through the life of the permit. Surveys will be conducted within 30 days prior to disturbance. Take of active nests will be avoided. Passive relocation (use of one-way doors and collapse of burrows) will occur when owls are present outside the nesting season.

Objective 7

Translocation sites for the burrowing owl will be created in the MSHCP Conservation Area for the establishment of new colonies. Translocation sites will be identified, taking into consideration unoccupied habitat areas, presence of burrowing mammals to provide suitable burrow sites, existing colonies and effects to other Covered Species. Reserve Managers will consult with the Wildlife Agencies regarding site selection prior to translocation site development.

APPENDIX A: PLANT AND WILDLIFE SPECIES

Plant and wildlife species identified on the Golden Meadows site during surveys from 2003 to 2021. One asterisk (*) indicates a non-native species; two asterisks (**) indicates a special status species; a question mark (?) indicates uncertainty regarding identification or native status. The list includes common butterfly species that were observed during Quino checkerspot butterfly surveys in 2004 but does not represent a complete inventory of insects present.

	Scientific Name	**Common Name**
	VASCULAR PLANTS	
	DICOTYLEDONS	
	ADOXACEAE	MUSKROOT FAMILY
	Sambucus nigra ssp. cerulea (S. mexicana)	Mexican elderberry, blue elderberry
	AMARANTHACEAE	AMARANTH FAMILY
*	*Amaranthus albus*	Tumbleweed, tumbling pigweed
	ANACARDIACEAE	SUMAC or CASHEW FAMILY
*	*Schinus molle*	Peruvian pepper tree
	APIACEAE	CELERY FAMILY
	Daucus pusillus	Rattlesnake weed, wild carrot
	ASTERACEAE	ASTER FAMILY
	Acourtia microcephala (Perezia microcephala)	Scapellote, perezia
	Ambrosia acanthicarpa	Annual bur-sage, annual sandbur
*	*Anthemis cotula*	Mayweed, dog mayweed
	Artemisia californica	California sagebrush
	Baccharis salicifolia (B. glutinosa)	Mulefat
	Bebbia juncea	Sweetbush
*	*Centaurea melitensis*	Tocalote
	Chaenactis artemisiifolia	White pincushion, wormwood pincushion
	Corethrogyne filaginifolia var. filaginifolia (Lessingia filaginifolia)	California-aster, sand-aster
	Deinandra fasciculata (Hemizonia fasciculata)	Fascicled tarplant, slender tarweed
	Encelia farinosa	Brittlebush
*	*Erigeron bonariensis (Conyza bonariensis)*	Flax-leaved horseweed
	Erigeron canadensis (Conyza canadensis)	Horseweed, mare's tail
	Eriophyllum confertiflorum	Golden-yarrow

	Scientific Name	**Common Name**
	Eriophyllum multicaule	Many-stem woolly daisy
	Gutierrezia californica (G. bracteata)	California matchweed
	Helianthus annuus	Western sunflower
	Helianthus gracilentus	Slender sunflower
*	*Lactuca serriola*	Prickly lettuce
	Lasthenia californica (L. chrysostoma)	California goldfields
	Layia platyglossa	Tidy-tips
	Logfia filaginoides (Filago californica)	California filago
*	*Matricaria discoidea (Chamomilla suaveolens, M. matricarioides)*	Pineapple weed
*	*Oncosiphon pilulifer (Matricaria globosa)*	Stinknet
	Rafinesquia californica	California chicory
*	*Senecio vulgaris*	Common groundsel
*	*Sonchus oleraceus*	Common sow thistle
	Stephanomeria virgata	Wreath plant
	Stylocline gnaphaloides	Everlasting neststraw
	Tetradymia comosa	Hairy horsebrush, common-thorn
	Uropappus lindleyi (Microseris lindleyi, M. linearifolia)	Silverpuffs
*?	*Xanthium spinosum*	Spiny cocklebur
	BORAGINACEAE	BORAGE OR WATERLEAF FAMILY
	Amsinckia intermedia (A. menziesii var. intermedia)	Large flower rancher's fiddleneck
	Cryptantha species	Unid. cryptantha
	Cryptantha intermedia	Common cryptantha
	Heliotropium curassavicum	Wild heliotrope
	Pectocarya linearis	Slender pectocarya
	Phacelia minor	Wild Canterbury bells
	Phacelia ramosissima	Branching phacelia
	Plagiobothrys species	Popcornflower
	BRASSICACEAE	MUSTARD FAMILY
*	*Brassica nigra*	Black mustard
*	*Hirschfeldia incana (Brassica geniculata)*	Shortpod mustard
	Lepidium nitidum	Shining peppergrass
*	*Raphanus sativus*	Wild radish
*	*Sisymbrium irio*	London rocket
*	*Sisymbrium orientale*	Wild mustard, hare's ear cabbage
	Thysanocarpus curvipes	Fringepod

	Scientific Name	**Common Name**
	CACTACEAE	CACTUS FAMILY
	Cylindropuntia californica var. parkeri (Opuntia parryi)	Valley cholla
	CHENOPODIACEAE	GOOSEFOOT FAMILY
*	*Atriplex suberecta*	Sprawling saltbush, Australian saltbush
*	*Chenopodium murale*	Nettle-leaved goosefoot, lamb's quarters
*	*Salsola tragus*	Russian thistle
	CONVOLVULACEAE	MORNING-GLORY FAMILY
	Calystegia macrostegia	Morning-glory
	Cuscuta californica	Chaparral dodder, witch's hair
	CRASSULACEAE	STONECROP FAMILY
	Crassula connata (C. erecta)	Pygmy-weed, pygmy stonecrop
	CUCURBITACEAE	GOURD FAMILY, CUCUMBER FAMILY
	Cucurbita foetidissima	Calabazilla
	Marah macrocarpa	Chilicothe, wild cucumber
	EUPHORBIACEAE	SPURGE FAMILY
	Croton setiger (C. setigerus, Eremocarpus setiger, E. setigerus)	Turkey-mullein, doveweed
	Euphorbia albomarginata (Chamaesyce albomarginata)	Rattlesnake sandmat, rattlesnake weed
	FABACEAE	LEGUME FAMILY, PEA FAMILY
	Acmispon americanus (Lotus purshianus, L. unifoliatus)	"Spanish" clover
	Acmispon glaber (Lotus scoparius)	Deerweed
	Lupinus species	Unid. lupine
	Lupinus bicolor	Miniature lupine, dove lupine
*	*Medicago polymorpha*	California burclover
*	*Vicia villosa*	Winter vetch
	FAGACEAE	OAK FAMILY
	Quercus agrifolia	Coast live oak
	GERANIACEAE	GERANIUM FAMILY
*	*Erodium botrys*	Long-beak filaree
*	*Erodium cicutarium*	Redstem filaree
	JUGLANDACEAE	WALNUT FAMILY
**	*Juglans californica*	Southern California black walnut

	Scientific Name	**Common Name**
	LAMIACEAE	MINT FAMILY
*	*Lamium amplexicaule*	Common henbit
*	*Marrubium vulgare*	Horehound
	Salvia apiana	White sage
	Salvia columbariae	Chia
	Salvia mellifera	Black sage
	Trichostema lanceolatum	Vinegar weed
	MALVACEAE	MALLOW FAMILY
*	*Malva parviflora*	Cheeseweed
	MYRSINACEAE	MYRSINE FAMILY
*	*Lysimachia (Anagallis) arvensis*	Scarlet pimpernel
	MYRTACEAE	MYRTLE FAMILY, EUCALYPTUS FAMILY
*	*Eucalyptus species*	Ornamental eucalyptus, gumtree
	NYCTAGINACEAE	FOUR O'CLOCK FAMILY
	Mirabilis laevis var. crassifolia (M. californica)	Wishbone bush
	ONAGRACEAE	EVENING-PRIMROSE FAMILY
	Camissonia species	Unid. evening-primrose
	Eulobus californica (Camissonia californica)	California false mustard, mustard evening primrose
	PAPAVERACEAE	POPPY FAMILY
	Eschscholzia californica	California poppy
	PHRYMACEAE	LOPSEED FAMILY
	Diplacus (Mimulus) aurantiacus (M. puniceus, M. longiflorus)	Bush monkeyflower, sticky monkeyflower
	Erythranthe (Mimulus) guttatus	Seep monkeyflower
	PLANTAGINACEAE	PLANTAIN FAMILY
	Antirrhinum nuttallianum	Nuttall snapdragon, violet snapdragon
	Keckiella antirrhinoides	Yellow bush-penstemon
	Plantago erecta	California plantain
	POLEMONIACEAE	PHLOX FAMILY
	Eriastrum sapphirinum	Sapphire woollystar
	Navarretia hamata	Hooked navarretia
	POLYGONACEAE	BUCKWHEAT FAMILY
	Chorizanthe fimbriata	Fringed spineflower
**	*Chorizanthe polygonoides var. longispina*	Long-spined spineflower
	Eriogonum fasciculatum var. foliolosum	Leafy California wild buckwheat, interior California buckwheat

	Scientific Name	**Common Name**
	Eriogonum fasciculatum var. polifolium	Mojave Desert California buckwheat
*	*Polygonum aviculare (P. arenastrum)*	Common knotweed
*	*Rumex crispus*	Curly dock
	PORTULACACEAE	PURSLANE FAMILY
*	*Portulaca oleracea*	Common purslane
	ROSACEAE	ROSE FAMILY
	Adenostoma fasciculatum	Chamise
	RUBIACEAE	MADDER FAMILY, COFFEE FAMILY
*?	*Galium aparine*	Goose grass, annual bedstraw
	SALICACEAE	WILLOW FAMILY
	Populus fremontii ssp. fremontii	Fremont cottonwood
	Salix gooddingii	Goodding's black willow
	Salix lasiolepis	Arroyo willow
	SCROPHULARIACEAE	FIGWORT FAMILY, SNAPDRAGON FAMILY
	Scrophularia californica	California figwort, coast figwort
	SOLANACEAE	NIGHTSHADE FAMILY
	Datura wrightii (D. meteloides)	Jimsonweed, tolguacha
*	*Nicotiana glauca*	Tree tobacco
	Solanum americanum (S. nodiflorum)	White nightshade
	TAMARICACEAE	TAMARISK FAMILY
*	*Tamarix species*	Unid. tamarisk
	URTICACEAE	NETTLE FAMILY
*	*Urtica urens*	Dwarf nettle
	ZYGOPHYLLACEAE	CALTROP FAMILY
*	*Tribulus terrestris*	Puncture vine
	MONOCOTYLEDONS	
	AGAVACEAE	CENTURY PLANT FAMILY, AGAVE FAMILY
	Hesperoyucca whipplei (Yucca whipplei)	Chaparral yucca
	LILIACEAE	LILY FAMILY
	Calochortus splendens	Splendid mariposa lily
	POACEAE	GRASS FAMILY
*	*Avena barbata*	Slender wild oat
*	*Avena fatua*	Wild oat

	Scientific Name	**Common Name**
*	*Bromus species*	Non-native brome
*	*Bromus diandrus (B. rigidus)*	Ripgut brome
*	*Bromus rubens (B. madritensis ssp. rubens)*	Red brome
*	*Digitaria sanguinalis*	Hairy crabgrass
*	*Festuca species (Vulpia species)*	Annual fescue
*	*Hordeum murinum*	Wall barley, hare barley
*	*Lamarckia aurea*	Goldentop grass
*	*Phalaris species*	Unid. canary grass
*	*Schismus barbatus*	Mediterranean grass
*	*Triticum aestivum*	Wheat
THEMIDACEAE		BRODIAEA FAMILY
	Dichelostemma capitatum (D. pulchella, Brodiaea pulchella)	Blue dicks, wild hyacinth
	Muilla maritima	Common muilla, rough muilla

	Scientific Name	**Common Name**
	VERTEBRATES	
	Reptiles	
	Colubridae	Colubrid Snakes
	Pituophis catenifer	Gopher snake
	Phrynosomatidae	Spiny Lizards
**	*Phrynosoma blainvillii*	Coast horned lizard
	Sceloporus occidentalis	Western fence lizard
	Sceloporus orcutti	Granite spiny lizard
	Uta stansburiana	Side-blotched lizard
	Teiidae	Teiid Lizards
**	*Aspidoscelis hyperythra*	Orange-throated whiptail
**	*Aspidoscelis tigris stejnegeri*	Coastal (western) whiptail
	Birds	
	Accipitridae	Hawks, Eagles, and Harriers
**	*Accipiter cooperii*	Cooper's hawk
	Buteo jamaicensis	Red-tailed hawk
	Buteo lineatus	Red-shouldered hawk
**	*Circus hudsonius (C. cyaneus)*	Northern harrier
**	*Elanus leucurus*	White-tailed kite
	Aegithalidae	Long-tailed Tits
	Psaltriparus minimus	Bushtit
	Alaudidae	Larks
**	*Eremophila alpestris actia*	California horned lark
	Anatidae	Ducks, Geese, Swans
	Anas platyrhynchos	Mallard (fly over)
	Apodidae	Swifts
	Aeronautes saxatalis	White-throated swift
	Ardeidae	Herons
**	*Ardea alba*	Great egret
**	*Ardea herodias*	Great blue heron (fly over)
	Cardinalidae	Cardinals
	Passerina amoena	Lazuli bunting
	Cathartidae	Vultures
	Cathartes aura	Turkey vulture

Charadriidae		Plovers
	Charadrius vociferus	Killdeer
Columbidae		Pigeons and Doves
*	*Columba livia*	Rock dove, common pigeon
	Zenaida macroura	Mourning dove
Corvidae		Crows and Jays
	Aphelocoma californica	California scrub jay
	Corvus brachyrhynchos	American crow
	Corvus corax	Common raven
Cuculidae		Cuckoos
	Geococcyx californianus	Greater roadrunner
Falconidae		Falcons
	Falco sparverius	American kestrel
Fringillidae		Finches
**	*Spinus (Carduelis) lawrencei*	Lawrence's goldfinch
	Spinus (Carduelis) psaltria	Lesser goldfinch
	Spinus (Carduelis) tristes	American goldfinch
	Haemorhous (Carpodacus) mexicanus	House finch
Hirundinidae		Swallows
	Hirundo rustica	Barn swallow
	Petrochelidon pyrrhonota tachina	Cliff swallow
	Stelgidopteryx serripennis	Northern rough-winged swallow
	Tachycineta thalassina	Violet-green swallow
Icteridae		Blackbirds
	Agelaius phoeniceus	Red-winged blackbird
	Euphagus cyanocephalus	Brewer's blackbird
	Icterus bullockii	Bullock's oriole
	Sturnella neglecta	Western meadowlark
Laniidae		Shrikes
**	*Lanius ludovicianus*	Loggerhead shrike
Mimidae		Mockingbirds
	Mimus polyglottos	Northern mockingbird
**	*Toxostoma redivivum*	California thrasher
Motacillidae		Wagtails and Pipits
	Anthus rubescens	American pipit
Odontophoridae		Quail
	Callipepla californica	California quail

Parulidae		Wood Warblers
	Geothlypis tolmiei	MacGillivray's warbler
	Oreothlypis celata	Orange-crowned warbler
	Setophaga coronata	Yellow-rumped warbler
Passerellidae		New World Sparrows
**	*Aimophila ruficeps canescens*	Southern California rufous-crowned sparrow
**	*Artemisiospiza belli*	Bell's sage sparrow
	Chondestes grammacus	Lark sparrow
	Melospiza melodia	Song sparrow
	Melozone crissalis	California towhee
	Passerculus sandwichensis	Savannah sparrow
	Pipilo maculatus	Spotted towhee
	Pooecetes gramineus	Vesper sparrow
	Spizella passerina	Chipping sparrow
	Zonotrichia leucophrys	White-crowned sparrow
Passeridae		Old World Sparrows
*	*Passer domesticus*	House sparrow
Picidae		Woodpeckers
	Colaptes auratus	Northern flicker
**	*Dryobates (Picoides) nuttallii*	Nuttall's woodpecker
Polioptilidae		Gnatcatchers
	Polioptila caerulea	Blue-gray gnatcatcher
**	*Polioptila californica*	Coastal California gnatcatcher
Strigidae		Owls
**	*Athene cunicularia*	Burrowing owl
Sturnidae		Starlings
*	*Sturnus vulgaris*	European starling
Timaliidae		Babblers
**	*Chamaea fasciata*	Wrentit
Trochilidae		Hummingbirds
	Calypte anna	Anna's hummingbird
**	*Calypte costae*	Costa's hummingbird
**	*Selasphorus rufus*	Rufous hummingbird
Troglodytidae		Wrens
	Catherpes mexicanus	Canyon wren
	Salpinctes obsoletus	Rock wren
	Thryomanes bewickii	Bewick's wren
	Troglodytes aedon	House wren
Turdidae		Thrushes
	Sialia mexicana	Western bluebird

Tyrannidae	Tyrant Flycatchers
Empidonax wrightii	Gray flycatcher
Myiarchus cinerascens	Ash-throated flycatcher
Sayornis nigricans	Black phoebe
Sayornis saya	Say's phoebe
Tyrannus verticalis	Western kingbird
Tyrannus vociferans	Cassin's kingbird

Mammals

Canidae	Dogs, Foxes, and Coyotes
Canis familiaris	Domestic dog
Canis latrans	Coyote
Geomyidae	Pocket Gophers
Thomomys bottae	Botta's pocket gopher (sign)
Leporidae	Rabbits
** *Lepus californicus bennettii*	San Diego black-tailed jackrabbit
Sylvilagus audubonii	Audubon's cottontail
Sciuridae	Squirrels
Spermophilus beecheyi	California ground squirrel

INVERTEBRATES

Lepidoptera	**Butterflies and Moths**
Papilionidae	Swallowtails
Papilio rutulus	Western tiger swallowtail
Papilio zelicaon	Anise swallowtail
Nymphalidae	Brush-footed butterflies
Euphydryas chalcedona	Chalcedon checkerspot
Junonia coenia	Buckeye
Vanessa cardui	Painted lady
Vanessa annabella	West coast lady
Vanessa virginiensis	Virginia lady
Lycaenidae	Blues, Hairstreaks, Coppers
Glaucopsyche lygdamus australis	Southern blue
Icaricia acmon	Acmon blue
Pieridae	Whites and Sulfurs
Anthocharis sara	Sara orange-tip
Anthocharis cethura	Felder's orange-tip
Pontia protodice	Checkered white

Riodinidae	Metalmarks
Apodemia mormo virgulti	Behr's metalmark
Hesperiidae	Skippers
Erynnis funeralis	Funereal duskywing
Pyrgus communis albescens	Small checkered skipper

APPENDIX B: SPECIAL STATUS SPECIES POTENTIALS FOR OCCURRENCE

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Plants				
Abronia villosa var. aurita Chaparral sand-verbena	Annual herb. Sandy soils in chaparral, coastal scrub, desert dunes at 75-1600m elevation. Riverside, San Bernardino, Imperial, San Diego, Orange Cos. (presumed extirpated in Orange Co.), Arizona, Baja.	(Jan)Mar-Sep	Fed: None Calif: S2 CRPR: 1B.1	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Allium marvinii Yucaipa onion	Perennial bulbiferous herb. Clay soils in openings in chaparral at 760-1065m. Riverside, San Bernardino, Orange, San Diego Cos.	Apr-May	Fed: None Calif: S1 CRPR: 1B.2 MSHCP: AC b USFS: S	Not expected; potentially suitable habitat, below elevation range, no documented occurrences within 5 mi., not observed during surveys.
Allium munzii Munz's onion	Perennial bulbiferous herb. Mesic, clay soils in chaparral, cismontane woodland, coastal scrub, pinyon juniper woodland, valley and foothill grassland at 297-1070m elevation. Western Riverside Co.	Mar-May	Fed: END Calif: THR, S1 CRPR: 1B.1 MSHCP: AC b	Low; no or marginal habitat, three documented occurrences within 5 mi. (from 1897, Menifee area – exact location unknown, mapped 4.5 mi. NE of site; 1962, exact location unknown, mapped 2.7 mi. NW; from 2015, 2.5 mi. SE), not observed during surveys.
Almutaster pauciflorus Alkali marsh aster	Perennial herb. Alkaline soils in meadows and seeps at 240 to 800m elevation. Inyo, Kern, Riverside, and San Bernardino Cos., SW and North-Central US, and Mexico.	Jun-Oct	Fed: None Calif: S1S2 CRPR: 2B.2	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Ambrosia pumila San Diego ambrosia	Perennial rhizomatous herb. Sandy or clay soils, often in disturbed areas, sometimes alkaline. Chaparral, coastal scrub, valley and foothill grassland, and vernal pools at 20-415m elevation. Riverside, San Diego Co., Baja.	Apr-Oct	Fed: END Calif: S1 CRPR: 1B.1 MSHCP: AC b	Not expected; potentially suitable habitat, above elevation range, no documented occurrences within 5 mi., not observed during surveys.
Amsinckia douglasiana Douglas' fiddleneck	Annual herb. Monterey shale, dry soils in cismontane woodland, valley and foothill grassland at sea level to 1950m elevation. Central coast of CA, few observations in southern CA. Not tracked in the CNDDB.	Mar-May	Fed: None Calif: S4 CRPR: 4.2	Not expected; no or marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Arctostaphylos rainbowensis Rainbow manzanita	Perennial evergreen shrub. Chaparral at 205-670m elevation. Riverside and San Diego Cos.	Dec-Mar	Fed: None Calif: S2 CRPR: 1B.1 MSHCP: AC BLM: S USFS: S	Absent; potentially suitable habitat, no documented occurrences within 5 mi., conspicuous plant not observed during surveys.
Astragalus pachypus var. jaegeri Jaeger's milk-vetch	Perennial shrub. Sandy or rocky soils in chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 365-975m elevation. Riverside and San Diego Cos.	Dec-Jun	Fed: None Calif: S1 CRPR: 1B.1 MSHCP: AC USFS: S BLM: S	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Atriplex coronata var. notatior San Jacinto Valley crownscale	Annual herb. Alkaline soils in playas, mesic areas of valley and foothill grassland, vernal pools at 139-500m elevation. Western Riverside Co.	Apr-Aug	Fed: END Calif: S1 CRPR: 1B.1 MSHCP: AC d	Not expected; no suitable habitat, no documented occurrences within 5 mi. not observed during surveys.
Atriplex parishii Parish's brittlescale	Annual herb. Alkaline soils in chenopod scrub, playas, vernal pools at 25-1900m elevation; Riverside, San Bernardino, LA, Orange, and San Diego Cos. and Baja. Presumed extirpated in LA, Orange, and San Bernardino Cos.	Jun - Oct	Fed: None Calif: S1 CRPR: 1B.1 MSHCP: AC d USFS: S	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Atriplex serenana var. davidsonii Davidson's saltscale	Annual herb. Alkaline soils in coastal bluff scrub, coastal scrub at 10-200m elevation; Channel Islands, LA, Orange, Riverside, San Luis Obispo, Santa Barbara, and Ventura Cos. Presumed extirpated in Santa Barbara Co., possibly extirpated in LA Co.	Apr - Oct	Fed: None Calif: S1 CRPR: 1B.2 MSHCP: AC d	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Ayenia compacta California ayenia	Perennial herb. Rocky soils in Mojavean and Sonoran desert scrub at 150-1095m elevation. Riverside, San Bernardino, San Diego Cos., Arizona, Sonora and Baja Mexico.	Mar-Apr	Fed: None Calif: S3 CRPR: 2B.3	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Brodiaea filifolia Thread-leaved brodiaea	Perennial bulbiferous herb. Often on clay soils in chaparral openings, cismontane woodland, coastal scrub, playas, valley and foothill grassland, and vernal pools at 25-1120m elevation. LA, Orange, Riverside, San Bernardino, and San Diego Cos.; scattered in Southern CA foothills & valleys.	Mar-Jun	Fed: THR Calif: END, S2 CRPR: 1B.1 MSHCP: AC d	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Brodiaea santarosae Santa Rosa Basalt brodiaea	Perennial bulbiferous herb. Basalt in valley and foothill grassland. Santa Rosa Plateau, Riverside and San Diego Cos.	May-Jun	Fed: None Calif: S1 CRPR: 1B.2 USFS: S	Absent; no suitable habitat, outside geographic range, no documented occurrences within 5 mi., not observed during surveys.
Calochortus catalinae Catalina mariposa-lily	Perennial bulbiferous herb. Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 15-700m elevation. LA, Orange, Riverside, San Bernardino, Santa Barbara, Ventura Co, some Channel Islands. Not tracked in CNDDB.	(Feb)Mar-Jun	Fed: None Calif: S3S4 CRPR: 4.2	Low; potentially suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Calochortus plummerae Plummer's mariposa lily	Perennial bulbiferous herb. Granitic rocky soils in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, valley and foothill grassland at 100-1700m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos.	May-Jul	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Calochortus weedii var. intermedius Intermediate mariposa lily	Perennial bulbiferous herb. Rocky, calcareous soils in chaparral, coastal scrub, valley and foothill grassland at 105-855m elevation. LA, Orange, San Bernardino, and western Riverside Co.	May-Jul	Fed: None Calif: S3 CRPR: 1B.2 USFS: S MSHCP: AC	Low; potentially suitable habitat, two documented occurrences within 5 mi. (2003, 3.5 mi. S; 2015, 4.2 mi. SE), not observed during surveys.
Carex buxbaumii Buxbaum's sedge	Perennial rhizomatous herb. Bogs and fens, mesic meadows and seeps, marshes and swamps at 3-3300m elevation. Most of US, northern CA, one occurrence reported near Lake Elsinore in Riverside Co. Not tracked in CNDDB.	Mar-Aug	Fed: None Calif: S3 CRPR: 4.2	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Caulanthus simulans Payson's jewelflower	Annual herb. Chaparral, coastal scrub at 90-2200m elevation. North-facing slopes and ridgelines on sandy-granitic soils, frequently on steep rocky slopes, in burned areas, or disturbed sites such as streambeds. Orange, western Riverside, San Diego Cos.	(Feb)Mar-May(Jun)	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Centromadia pungens ssp. *laevis* Smooth tarplant	Annual herb. Alkaline soils in chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grassland at 0-640m elevation. Also fallow fields, drainage ditches; mainly in SW Riverside Co., a few sites in interior valleys of LA, San Bernardino, San Diego Cos.	Apr-Sep	Fed: None Calif: S2 CRPR: 1B.1 MSHCP: AC d	Moderate; potentially suitable habitat, 11 documented occurrences within 5 mi. (1999 thru 2021, closest is 0.7 mi. NNW), not observed during surveys.
Chorizanthe leptotheca Peninsular spineflower	Annual herb. Granitic soils and alluvial fans in chaparral, coastal scrub, lower montane coniferous forest at 300-1900m elevation. Riverside, San Bernardino, LA, San Diego, Kern, San Luis Obispo Cos., Baja. Not tracked in the CNDDB.	May-Aug	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, one mapped CCH record within 5 mi. (1893, mapped 2.1 mi. NE), not observed during surveys.
Chorizanthe parryi var. *parryi* Parry's spineflower	Annual herb. Sandy or rocky soils and openings in chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 275-1220m elev. LA, Riverside, San Bernardino Cos.	Apr-Jun	Fed: None Calif: S2 CRPR: 1B.1 USFS: S BLM: S MSHCP: AC	Moderate; potentially suitable habitat, 18 documented occurrences within 5 mi. (1998 thru 2017, closest is 0.9 mi. SW), not observed during surveys.
Chorizanthe polygonoides var. longispina Long-spined spineflower	Annual herb. Often on clay soils in chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools at 30-1530m elevation. Orange, Riverside, San Diego Cos., Baja.	Apr-Jul	Fed: None Calif: S3 CRPR: 1B.2 MSHCP: AC	Occurs; observed on site during surveys in 2017.
Clinopodium chandleri San Miguel savory	Perennial shrub. Rocky, gabbroic, or metavolcanic soils in chaparral, cismontane woodlands, coastal scrub, riparian woodland, valley and foothill grassland at 120-1075m elevation. Orange, Riverside, San Diego Co., Baja.	Mar-Jul	Fed: None Calif: S2 CRPR: 1B.2 MSHCP: AC b BLM: S USFS: S	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Convolvulus simulans Small-flowered morning-glory	Annual herb. Clay soils, serpentinite seeps, chaparral openings, coastal scrub, valley and foothill grassland at 30-740m elevation. LA, Orange, Riverside, San Bernardino, San Diego Cos. and Central CA, Baja. Not tracked in CNDDB.	Mar-Jul	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low to moderate; potentially suitable habitat, nine mapped CCH records within 5 mi. (1991-2018, all about 2.5 mi. SE), not observed during surveys.
Cryptantha wigginsii Wiggins' cryptantha	Annual herb. Coastal scrub at 20-275m elevation, often on clay soils. LA, Riverside, San Diego Cos., Catalina Island, and Baja.	Feb-Jun	Fed: None Calif: S1 CRPR: 1B.2	Not expected; potentially suitable habitat, above elevation range, no documented occurrences within 5 mi., not observed during surveys.
Deinandra (Hemizonia) paniculata Paniculate tarplant	Annual herb. Usually vernally mesic areas, sometimes sandy. Coastal scrub, valley and foothill grassland, vernal pools at 25-940m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura, Kern, Santa Barbara, San Luis Obispo Cos., Baja. Not tracked in the CNDDB.	(Mar) Apr-Nov	Fed: None Calif: S4 CRPR: 4.2	Low; potentially suitable or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Dodecahema leptoceras Slender-horned spineflower	Annual herb. Open, sandy alluvial benches in valleys & canyons. Chaparral, coastal scrub (alluvial fans), cismontane woodland at 200-760m elevation. LA, Riverside, San Bernardino Cos.	Apr-Jun	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC b	Not expected; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Dudleya multicaulis Many-stemmed dudleya	Perennial herb. Often on clay soils in chaparral, coastal scrub, valley and foothill grassland at 15-790m elevation. LA, Orange, Riverside, San Bernardino, San Diego Cos.	Apr-Jul	Fed: None Calif: S2 CRPR: 1B.2 USFS: S MSHCP: AC b	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Eryngium aristulatum var. parishii San Diego button-celery	Annual/perennial herb. Mesic areas in coastal scrub, valley and foothill grassland, vernal pools at 20-620m elevation. Riverside, LA, Orange, San Diego Cos. and Baja.	Apr-Jun	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Erythranthe diffusa Palomar monkeyflower	Annual herb. Sandy or gravelly soils in chaparral, lower montane coniferous forest at 1220-1830m elevation. Orange, Riverside, San Diego Co., Baja. Not tracked in the CNDDB.	Apr-Jun	Fed: None Calif: S3 CRPR: 4.3	Absent; no or marginal habitat, well below elevation range, no mapped CCH records within 5 mi., not observed during surveys.
Geothallus tuberosus Campbell's liverwort	Ephemeral liverwort. Grows on soil in mesic coastal scrub, vernal pools at 10-600m elevation. Riverside and San Diego Cos.	Not applicable	Fed: None Calif: S2 CRPR: 1B.1	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Harpagonella palmeri Palmer's grapplinghook	Annual herb. Clay soils and open grassy areas within shrubland in chaparral, coastal scrub, valley and foothill grassland at 20-955m elevation. LA, Orange, Riverside, San Diego Co., Catalina Island, AZ, Baja and Sonora, Mexico.	Mar-May	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; no or marginal habitat, one documented occurrence within 5 mi. (1981, 2.4 mi. SE), not observed during surveys.
Hesperocyparis forbesii Tecate cypress	Perennial evergreen tree. Clay, gabbroic, or metavolcanic soils in closed-cone coniferous forest, chaparral at 80-1500m elevation. Orange, Riverside, San Diego Co., Baja.	Not applicable	Fed: None Calif: S2 CRPR: 1B.1	Absent; no or marginal habitat, no documented occurrences within 5 mi., conspicuous plant not observed during surveys.
Holocarpha virgata ssp. elongata Graceful (curving) tarplant	Annual herb. Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland at 60-1100m elevation. Orange, Riverside, San Diego Cos. Known in Riverside County only from the Santa Rosa Plateau. Not tracked in CNDDB.	May-Nov	Fed: None Calif: S3 CRPR: 4.2 MSHCP: AC	Not expected; potentially suitable habitat, outside geographic range, no mapped CCH records within 5 mi., not observed during surveys.
Hordeum intercedens Vernal barley	Annual grass. Saline flats and depressions in valley and foothill grassland, vernal pools, coastal dunes, coastal scrub at 5-1000m elevation. LA, Orange, Riverside, San Diego Cos., Central CA, Channel Islands. Not tracked in the CNDDB.	Mar-Jun	Fed: None Calif: S3S4 CRPR: 3.2 MSHCP: AC	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Juglans californica Southern California black walnut	Perennial deciduous tree. Alluvial soils in chaparral, cismontane woodland, coastal scrub, riparian woodland at 50-900m elevation. LA, Orange, Riverside, Santa Barbara, San Bernardino, San Diego, Ventura Cos., Central and Northern CA. Not tracked in CNDDB.	Mar-Aug	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Occurs; observed onsite during surveys.
Juncus acutus ssp. leopoldii Southwestern spiny rush	Perennial rhizomatous herb. Mesic coastal dunes, alkaline seeps, coastal salt marshes at 3-900m elevation. S CA, central coast, AZ, NV, other areas. Not tracked in CNDDB.	(Mar)May-Jun	Fed: None Calif: S4 CRPR: 4.2	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Juncus luciensis Santa Lucia dwarf rush	Annual herb. Chaparral, Great Basin scrub, lower montane coniferous forest, meadows and seeps, vernal pools at 300-2040m elevation. Riverside and San Diego Cos., central and northern CA.	Apr-Jul	Fed: None Calif: S3 CRPR: 1B.2 USFS: S	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Lasthenia glabrata spp. coulteri Coulter's goldfields	Annual herb. Coastal salt marshes and swamps, playas, vernal pools at 1-1220m elevation. Riverside, San Bernardino, LA, Orange, Ventura Cos., Central and Northern CA, Baja. Presumed extirpated in LA, San Bernardino Cos.	Feb-Jun	Fed: None Calif: S2 CRPR: 1B.1 BLM: S MSHCP: AC d	Absent; no suitable habitat, three documented occurrences within 5 mi. (2003, 1.7 mi. N, appears to be developed; 2011, 3.3 mi. SE; 2015, 2.7 mi. NW), not observed during surveys.
Lathyrus splendens Pride-of-California	Perennial herb. Chaparral at 200-1525m elevation. LA, Riverside, San Bernardino Cos., Baja. Not tracked in CNDDB.	Mar-Jun	Fed: None Calif: S4 CRPR: 4.3	Not expected; potentially marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.
Lepidium virginicum var. *robinsonii* Robinson's pepper-grass	Annual herb. Chaparral, coastal scrub at 1-885m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura, Santa Barbara, Mono Cos., Channel Islands, Baja.	Jan-Jul	Fed: None Calif: S3 CRPR: 4.3	Low; potentially suitable habitat, two documented occurrences within 5 mi. (2006, 2.0 mil SSW; 2008, 3.3 mi. N), not observed during surveys.
Lilium humboldtii ssp. ocellatum Ocellated Humboldt lily	Perennial bulbiferous herb. Openings in chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, riparian woodland at 30-1800m elevation. LA, Orange, Riverside, Santa Barbara, San Bernardino, San Diego, Ventura Co, some Channel Islands. Lower stream benches in riparian corridors in lower montane coniferous forest and coastal chaparral or shaded, dry slopes beneath a dense oak or conifer canopy.	Mar-Jul(Aug)	Fed: None Calif: S4? CRPR: 4.2 MSHCP: NAC f	Absent; no suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.
Lilium parryi Lemon lily	Perennial bulbiferous herb. Mesic soils in upper and lower montane coniferous forest, riparian forest, meadows and seeps at 1220-2745m elevation. LA, Riverside, San Bernardino, San Diego Co, Arizona, Sonora Mex.	Jul-Aug	Fed: None Calif: S3 CRPR: 1B.2 USFS: S MSHCP: NAC f	Absent; no suitable habitat, well below elevation range, no documented occurrences within 5 mi., not observed during surveys.
Limnanthes alba ssp. parishii Parish's meadowfoam	Annual herb. Vernally mesic areas in lower montane coniferous forest, meadows and seeps, vernal pools at 600-2000m elevation. Riverside and San Diego Cos.	Apr-Jun	Fed: None Calif: END, S2 CRPR: 1B.2 USFS: S BLM: S MSHCP: AC	Absent; no suitable habitat, below elevation range, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Microseris douglasii ssp. platycarpha Small-flowered microseris	Annual herb. Clay soils in cismontane woodland, coastal scrub, valley and foothill grassland, vernal pools at 15-1070m elevation. LA, Orange, Riverside, San Diego Cos., Channel Islands, Baja. Not tracked in CNDDB.	Mar-May	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Low; potentially suitable habitat, eight mapped CCH records within 5 mi. (2000, 1.5 mi. N, 1996, 2.7 mi. WSW; 1992-2015, all about 2.5 mi. SE), not observed during surveys.
Monardella hypoleuca ssp. intermedia Intermediate monardella	Perennial rhizomatous herb. Chaparral, cismontane woodlands, sometimes lower montane coniferous forest at 400-1250m elevation. Orange, Riverside, San Diego Co.	Apr-Sep	Fed: None Calif: S2? CRPR: 1B.3	Not expected; potentially marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Myosurus minimus ssp. apus Little mousetail	Annual herb. Valley and foothill grasslands, alkaline vernal pools at 20-640m elevation. Riverside, San Bernardino, San Diego Cos., Central and Northern CA, Oregon, Baja.	Mar-Jun	Fed: None Calif: S2 CRPR: 3.1 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Nama stenocarpa Mud nama	Annual/perennial herb. Found in marshy habitat on lake margins and riverbanks at 5-500m elevation. S CA, San Clemente Island, central CA, AZ, TX, Baja, Sonora.	Mar-Oct	Fed: None Calif: S1S2 CRPR: 2B.2 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Navarretia fossalis Spreading navarretia	Annual herb. Chenopod scrub, shallow freshwater marshes and swamps, playas, vernal pools at 30-655m elevation. LA, Riverside, San Diego, San Luis Obispo Cos., Baja.	Apr-Jun	Fed: THR Calif: S2 CRPR: 1B.1 MSHCP: AC b	Absent; no suitable habitat six documented occurrences within 5 mi. (1922, exact location unknown, mapped 1.0 mi. SE; 2001-2017, closest is 1.6 mi. N, appears to have been developed), not observed during surveys.
Navarretia prostrata Prostrate vernal pool navarretia	Annual herb. Mesic areas in coastal scrub, valley and foothill grassland (alkaline), meadows and seeps, vernal pools at 3-1210m elevation. Locations in northern, central, and southern CA.	Apr-Jun	Fed: None Calif: S2 CRPR: 1B.2 MSHCP: AC d	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Orcuttia californica California Orcutt grass	Annual grass. Vernal pools at 15-660m elevation. LA, Orange, Riverside, San Diego, Ventura Co., Baja.	Apr-Aug	Fed: END Calif: END, S1 CRPR: 1B.1 MSHCP: AC b	Absent; no suitable habitat, three documented occurrences within 5 mi. (1941, exact location unknown, mapped 1.2 mi. NNE, possibly extirpated; 2001, 1.8 mi. ESE; 2015, 1.8 mi. E), not observed during surveys.
Polygala cornuta var. fishiae Fish's milkwort	Perennial deciduous shrub. Chaparral, cismontane woodland, riparian woodlands at 100-1000m elevation. LA, Orange, Riverside, Santa Barbara, San Diego, and Ventura Co., Baja. Not tracked in CNDDB.	May-Aug	Fed: None Calif: S4 CRPR: 4.3 MSHCP: AC	Absent; potentially marginal habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Pseudognaphalium leucocephalum White rabbit-tobacco	Perennial herb. Sandy or gravelly soils in chaparral, cismontane woodland, coastal scrub, riparian woodland at 0-2100m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos., AZ, NM, TX, Baja and Sonora Mex.	(Jul)Aug-Nov(Dec)	Fed: None Calif: S2 CRPR: 2B.2	Low; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Quercus engelmannii Engelmann oak	Perennial deciduous tree. Chaparral, cismontane woodland, riparian woodland, valley and foothill grassland at 50-1300m elevation. Mostly in foothills of Orange, west Riverside, San Bernardino, and San Diego Counties, also southeast San Gabriel Mountain foothills (LA County). Not tracked in the CNDDB.	Mar-Jun	Fed: None Calif: S3 CRPR: 4.2	Absent; potentially suitable habitat, conspicuous plant not observed during surveys.
Romneya coulteri Coulter's matilija poppy	Large perennial rhizomatous herb. Often in burn areas in chaparral, coastal scrub at 20-1200m elevation. LA, Orange, Riverside, San Bernardino, San Diego, San Luis Obispo Cos. Not tracked in CNDDB.	Mar-Jul(Aug)	Fed: None Calif: S4 CRPR: 4.2 MSHCP: AC	Absent; no or marginal habitat, conspicuous plant not observed during surveys.
Scutellaria bolanderi ssp. austromontana Southern mountains skullcap	Perennial rhizomatous herb. Mesic areas in chaparral, cismontane woodland, lower montane coniferous forest at 425-2000m elevation. Often in meadows and along streams. LA, Riverside, San Bernardino, San Diego Cos. Presumed extirpated in LA and San Bernardino Cos.	Jun-Aug	Fed: None Calif: S3 CRPR: 1B.2 USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Sibaropsis hammittii Hammitt's clay-cress	Annual herb. Clay soils in chaparral openings, valley and foothill grassland at 720-1065m elevation. Riverside and San Diego Co.	Mar-Apr	Fed: None Calif: S2 CRPR: 1B.2 USFS: S MSHCP: AC b	Absent; no or marginal habitat, no documented occurrences within 5 mi., below elevation range, not observed during surveys.
Sidalcea neomexicana Salt spring checkerbloom	Perennial herb. Alkaline, mesic soils in chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, playas at 15-1530m elevation. Kern, LA, Orange, Riverside, San Bernardino, San Diego, Ventura Cos., western US, Sonora Mex. Presumed extirpated in LA Co.	Mar-Jun	Fed: None Calif: S2 CRPR: 2B.2 USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Sphaerocarpos drewiae Bottle liverwort	Ephemeral liverwort. Grows on soil in openings in chaparral and coastal scrub at 90-600m elevation. Riverside and San Diego Cos.	Not applicable	Fed: None Calif: S1 CRPR: 1B.1	Not expected; potentially suitable habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Growth Form, Habitat and Distribution	Flowering Season	Conservation Status	Potential for Occurrence
Symphyotrichum defoliatum San Bernardino aster	Perennial rhizomatous herb. Near ditches, streams, springs in cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, valley and foothill grasslands (vernally mesic) at 2-2040m elevation. LA, Orange, Riverside, San Bernardino, San Diego, Imperial, Kern, Santa Barbara, San Luis Obispo Cos.	Jul-Nov	Fed: None Calif: S2 CRPR: 1B.2 USFS: S BLM: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Texosporium sancti-jacobi Woven-spored lichen	Crustose lichen. Grows on soil, small mammal pellets, dead twigs, and *Selaginella* species, in chaparral openings at 60-660m elevation. LA, Riverside, San Diego, Ventura, Santa Barbara, San Benito Cos., San Clemente Island, ID, OR, WA.	Not applicable	Fed: None Calif: S2 CRPR: 3	Not expected; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Tortula californica California screw-moss	Moss. Sandy soil in chenopod scrub, valley and foothill grassland at 10-1460m elevation. LA, Riverside, San Diego, Ventura Cos., Central and Northern CA, Channel Islands.	Not applicable	Fed: None Calif: S2? CRPR: 1B.2 BLM: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Trichocoronis wrightii var wrightii Wright's trichocoronis	Annual herb. Alkaline soils in meadows and seeps, marshes and swamps, riparian forest, vernal pools at 5-435m elevation. Riverside Co., Central Valley, TX, Baja.	May-Sep	Fed: None Calif: S1 CRPR: 2B.1 MSHCP: AC b	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Viguiera laciniata San Diego County viguiera	Perennial shrub. Chaparral, coastal scrub at 60-750m elevation. Riverside, Orange, San Diego Cos (occurrences outside of San Diego Co are introduced), Baja and Sonora, Mexico. Not tracked in CNDDB.	Feb-Jun(Aug)	Fed: None Calif: S4 CRPR: 4.3	Absent; potentially suitable habitat, no mapped CCH records within 5 mi., not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Invertebrates			
Bombus crotchii Crotch bumble bee	Coastal CA E to Sierra-Cascade crest & S into Mexico. Open grassland and scrub habitats. Food plant genera include *Antirrhinum, Asclepias, Chaenactis, Lupinus, Medicago, Salvia, Phacelia, Clarkia, Dendromecon, Eschscholzia,* and *Eriogonum*. Lives in colonies that may be underground in rodent holes or above ground in rock piles, tree cavities, etc.	Fed: None Calif: SA[3], S1S2	Low to moderate; potentially suitable habitat, food plants present, two documented occurrences within 5 mi. (2001, 1.5 mi. WNW; 1975, exact location unknown, mapped 3.5 mi. NW), no bee colonies incidentally observed during surveys.
Branchinecta lynchi Vernal pool fairy shrimp	Vernal pools or similar vernal habitats, requires cool water pools (≤50ºF to hatch, ≤75ºF to survive); disjunct locations in Riverside Co. and the Coast Ranges thru Central Valley to Tehama Co., southern Oregon, up to elevation of 1159m.	Fed: THR Calif: SA, S3 MSHCP: AC a	Absent; no suitable habitat, no documented occurrences within 5 mi.
Branchinecta sandiegonensis San Diego fairy shrimp	Vernal pool complexes; endemic to San Diego and Orange County mesas. One occurrence in Murrieta is a transplant to a mitigation pool outside of native range.	Fed: END Calif: SA, S2	Absent; no suitable habitat, one documented occurrence within 5 mi. (2017, Clayton Ranch Mitigation Site; transplant outside of native range).
Cincindela senilis frosti Senile tiger beetle	Coastal salt marshes, tidal mud flats, interior alkali mud flats. CA and northern Mexico, San Diego Co. to Sonoma and Lake Co.	Fed: None Calif: SA, S1	Absent; no suitable habitat, no documented occurrences within 5 mi.
Danaus plexippus pop. 1 Monarch butterfly	California overwintering population.	Fed: CAN State: SA, S2S3 USFS: S (Los Padres NF)	Absent; individual butterflies may be present, but too far inland for overwintering.

[3] Crotch bumble bee was previously a candidate for state listing, but the Sacramento Superior Court ruled that insects are not eligible for listing under the California Endangered Species Act: *Almond Alliance of California v. California Department of Fish and Wildlife*, Sacramento Superior Court No. 34-2019-80003216 (Nov. 13, 2020). The California Fish and Game Commission filed an intent to appeal this decision in February 2021. The status of this species may be affected by subsequent litigation or changes to regulations.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Euphydryas editha quino Quino checkerspot butterfly	Coastal scrub, open chaparral, juniper woodland, native grassland. Western Riverside Co., southern San Diego Co., Baja. Flight season from mid-Jan to late May. Host plants are dwarf plantain (*Plantago erecta*), purple owl's clover (*Castilleja exserta*), white snapdragon (*Antirrhinum coulterianum*), wooly plantain (*Plantago patagonica*), thread-leaved bird's beak (*Cordylanthus rigidus*). USFWS considers species extirpated in San Bernardino Co.	Fed: END Calif: SA, S1S2 MSHCP: AC	Low; potentially marginal habitat, one host plant species present (*Plantago erecta*), 11 documented occurrences within 5 mi. (1997-2003, closest is 2.6 mi. SE), not observed during focused surveys in 2004 and not incidentally observed during later surveys.
Linderiella occidentalis California linderiella	Vernal pools, seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and total dissolved solids. N and Central CA, Riverside (Santa Rosa Plateau) and Ventura Cos.	Fed: None Calif: SA, S2S3	Absent; no suitable habitat, outside known geographic range.
Linderiella santarosae Santa Rosa Plateau fairy shrimp	Found only in the basalt vernal pools on Santa Rosa Plateau in Riverside County.	Fed: None Calif: SA, S1 MSHCP: AC a	Absent; no suitable habitat, outside known geographic range.
Neolarra alba White cuckoo bee	Cleptoparasitic in the nests of perdita bees. Known only from localities in Southern California. All occurrences are historical.	Fed: None Calif: SA, SH	Not expected; no documented occurrences within 5 mi., all occurrences are historical.
Socalchemmis icenoglei Icenogle's socalchemmis spider	Coastal scrub; known only from the type locality in the vicinity of Winchester, Riverside Co.	Fed: None Calif: SA, S1	Not expected; no documented occurrences within 5 mi.
Streptocephalus woottoni Riverside fairy shrimp	Endemic to Western Riverside, Orange, and San Diego counties in areas of tectonic swales/earth slump basins in grassland and coastal sage scrub. Coastal scrub, valley & foothill grassland, vernal pool, wetland. Inhabit seasonally astatic pools filled by winter/spring rains. Hatch in warm water later in the season. Generally restricted to pools greater than 12 inches deep. All known populations lie between 30 and 415 meters elevation.	Fed: END Calif: SA, S1S2 MSHCP: AC a	Absent; no suitable habitat, 8 documented occurrences within 5 mi. (2002-2017, closest extant is 1.8 mi. ESE).
Fish			
Gila orcuttii Arroyo chub	Slow-moving or backwater sections of warm/ cool streams with mud or sand substrates. LA, San Gabriel, San Luis Rey, Santa Ana & Santa Margarita Riv & Malibu & San Juan creeks.	Fed: None Calif: SSC, S2 MSHCP: AC USFS: S	Absent; no perennial aquatic habitat.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Amphibians			
Anaxyrus californicus Arroyo toad	Washes & intermittent streams of semi-arid regions, sandy-banked rivers, riparian woodlands, & loose gravel. Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range, below 4600 ft. Southern California to tip of Baja California. Desert pop. along Mojave River.	Fed: END Calif: SSC, S2S3 MSHCP: AC c	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Rana draytonii California red-legged frog	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	Fed: THR Calif: SSC, S2S3 MSHCP: AC c	Absent; no perennial aquatic habitat.
Spea hammondii Western spadefoot toad	Cismontane woodland, coastal scrub, valley & foothill grassland, vernal pool. Breeds in quiet streams & vernal pools, burrows beneath sand during dry season. W CA, Central Valley to Baja California. From near sea level up to 4,500 ft elev.	Fed: None Calif: SSC, S3 BLM: S MSHCP: AC	Absent; no suitable habitat, 17 documented occurrences within 5 mi. (1998-2019, closest is 1.1 mi. NE), not observed during surveys.
Taricha torosa Coast Range newt	Valley-foothill hardwood and hardwood-conifer, coastal scrub, chaparral, grassland, mixed conifer. Coast Ranges from N San Diego Co. to central Mendocino Co., southern Sierra Nevada foothills S of Kaweah River. Spends most of the year in subterranean refuges, migrates to aquatic breeding areas in the fall and returns in the spring.	Fed: None Calif: SSC, S4 MSHCP: AC	Absent; no suitable aquatic breeding habitat on or adjacent to the site, no documented occurrences within 5 mi., not observed during surveys but is secretive.
Reptiles			
Anniella stebbinsi (Anniella pulchra pulchra) Southern California legless lizard	Various habitats, mainly shrublands, <6500 ft. elev. Coast Ranges from Bay area to N Baja CA, SW Sierra Nevada, parts of the Central Valley, Transverse & Peninsular Ranges.	Fed: None Calif: SSC, S3 USFS: S	Low to moderate; potentially suitable habitat, one documented occurrence within 5 mi. (2011, 3.9 mi. SW), not observed during surveys but is secretive.
Arizona elegans occidentalis California glossy snake	Arid scrub, rocky washes, grasslands, chaparral, often with loose or sandy soils. Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular Ranges, south to Baja California. Sea level to 7200' elev. Nocturnal.	Fed: None Calif: SSC, S2	Low; potentially marginal habitat, three documented occurrences within 5 mi. (1977, exact location unknown, mapped 3.4 mi. NW; 1946, exact location unknown, mapped 4.7 mi. SW; 1946, exact location unknown, mapped 4.2 mi. W), not observed during surveys but is nocturnal.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Aspidoscelis hyperythra Orange-throated whiptail	Low-elevation coastal scrub, chaparral, valley-foothill hardwood, sea level to 1040m. Sandy areas, patches of rock. S CA, west of desert to tip of Baja CA.	Fed: None Calif: WL, S2S3 USFS: S MSHCP: AC	Occurs; observed on the site during surveys.
Aspidoscelis tigris stejnegeri Coastal whiptail	Primarily hot, dry open areas with sparse foliage, chaparral, woodland, riparian; coastal So CA, mostly west of Peninsular Ranges and south of Transverse Ranges, north into Ventura County, below ±7000' elev. and into Baja.	Fed: None Calif: SSC, S3 MSHCP: AC	Occurs; observed on the site during surveys.
Coleonyx variegatus abbotti San Diego banded gecko	Rock outcrops in shrublands, to 5000' elevation; southwest Calif. through much of n. Baja Calif.	Fed: None Calif: SSC, S1S2 MSHCP: AC	Low; potentially marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Crotalus ruber Red-diamond rattlesnake	Desert scrub, thorn scrub, chaparral below 4,000ft. San Bernardino County S through most of Baja California, Mexico.	Fed: None Calif: SSC, S3 USFS: S MSHCP: AC	Low; no or marginal habitat, two documented occurrences within 5 mi. (2001, 2.5 mi. WSW; 2001, 1.5 mi. NW), not observed during surveys.
Diadophis punctatus modestus San Bernardino ringneck snake	Open relatively rocky areas within valley-foothill locales, mixed chaparral/annual grasslands. Prefers moist habitats. W San Diego & Riv. Cos., SW San Bern., Vent. & LA Cos., NW Baja CA.	Fed: None Calif: SA, S2? USFS: S	Low; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.
Emys marmorata Western pond turtle	Perennial ponds, streams, marshes, irrigation ditches. Coastal S & cent. CA, NW Baja CA, below about 4800 ft. elev. (few higher elev. pops.)	Fed: None Calif: SSC, S3 BLM: S USFS: S MSHCP: AC	Absent; no perennial aquatic habitat.
Phrynosoma blainvillii Coast horned lizard	Coastal sage scrub, low elevation chaparral, annual grassland, riparian scrub and woodlands, desert wash, pinyon and juniper woodland, valley and foothill grassland, 0-2438m elevation. SW California to NW Baja California, Mexico.	Fed: None Calif: SSC, S3S4 BLM: S MSHCP: AC	Occurs; observed on the site during surveys.
Salvadora hexalepis virgultea Coast patch-nosed snake	Shrublands, washes, sandy flats, rocky areas; Santa Barbara County through southwest Calif., to northwest Baja Calif. Diurnal.	Fed: None Calif: SSC, S2S3	Low; no or marginal habitat, no documented occurrences within 5 mi., not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Thamnophis hammondii Two-striped gartersnake	Usually in or near perennial fresh water & adjacent riparian habitat, pools in streams. SW CA & NW Baja California. Usually in or near perennial fresh water & adjacent riparian habitat, pools in streams. SW CA & NW Baja California. Primarily aquatic. Diurnal. Also active at night and at dusk during hot weather in some areas. Can be active most of the year depending on weather conditions. Has been found from January to November.	Fed: None Calif: SSC, S3S4 BLM: S USFS: S	Absent; no suitable habitat, no documented occurrences within 5 mi., not observed during surveys.
Birds			
Accipiter cooperii Cooper's hawk	Cismontane woodland, riparian forest, riparian woodland, upper montane coniferous forest. Forages in open areas over scrublands; California, Mexico, Central America. Nests in trees, often in dense woods. Year-round resident in most of southern California range. CNDDB only tracks nesting.	Fed: None Calif: WL, S4 MSHCP: AC	Occurs (foraging), low (nesting); observed on the site during surveys, no or marginal nesting habitat, no documented occurrences (nesting) within 5 mi.
Aechmophorus clarkii Clark's grebe	Requires large, open waters for courtship, feeding, and flocking, and extensive beds of tall, emergent vegetation such as tules or cattails for nesting; generally nests in colonies. Not tracked in CNDDB.	Fed: BCC Calif: None	Absent (foraging and nesting); no suitable habitat, may be seen in migration or moving between large lakes in the region, not observed during surveys.
Agelaius tricolor Tricolored blackbird	Breeds colonially in freshwater marshes, nomadic among marshes and fields in winter; almost completely endemic to Calif. Year-round resident in southern California range. CNDDB only tracks nesting.	Fed: BCC Calif: THR, SSC, S1S2 BLM: S MSHCP: AC	Low to moderate (foraging), absent (nesting); potentially suitable wintering habitat, no suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (2008, 4.9 mi. SE), several eBird records in vicinity, not observed during surveys.
Aimophila ruficeps canescens Southern California rufous-crowned sparrow	Sparse, mixed chaparral, scrub, rocky, brushy slopes. Central California to Baja California. Year-round resident in southern California range.	Fed: None Calif: WL, S3 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Aquila chrysaetos Golden eagle	Found in a variety of habitats from sea level to 11,500 feet, rugged open habitats preferred. Large platform nests constructed on secluded cliffs, large trees, and occasionally structures (i.e., electrical transmission towers). CNDDB tracks nesting and wintering.	Fed: BGEPA, BCC Calif: FP, WL, S3 BLM: S MSHCP: AC	Not expected (foraging), absent (nesting); potentially marginal foraging habitat, no suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (1974, 2.5 mi. N), multiple eBird records in vicinity (may be seen soaring overhead), not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Ardea alba Great egret	Brackish and freshwater marshes, estuary, riparian forest, wetland. Colonial nester in large trees. Rookery sites located near marshes, tide-flats, irrigated pastures, and margins of rivers and lakes. CNDDB only tracks nesting colonies.	Fed: none Calif: SA, S4	Occurs (foraging or fly over), absent (nesting); observed onsite during surveys, no nesting habitat or nesting colonies present.
Ardea herodias Great blue heron	Brackish and freshwater marshes, estuary, riparian forest, wetland. Colonial nester in tall trees, cliffsides, and sequestered spots on marshes. Rookery sites in close proximity to foraging areas: marshes, lake margins, tide-flats, rivers and streams, wet meadows. CNDDB only tracks nesting colonies.	Fed: none Calif: SA, S4 MSHCP: AC	Occurs (fly over), not expected (foraging), absent (nesting); no or marginal foraging habitat, no suitable nesting habitat, no documented occurrences (nesting) within 5 mi., multiple eBird records in vicinity.
Artemisiospiza belli Bell's sage sparrow	Sage scrub and chaparral communities. Nests mainly in shrubs, also in grass, and occasionally on ground under shrub. Found in coastal sage scrub in south of range. Central Washington southward to Baja California, Mexico. Year-round resident in southern CA.	Fed: BCC Calif: WL, S3 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Asio otus Long-eared owl	Conifer, oak, riparian, pinyon-juniper, and desert woodlands that are open or adjacent to grasslands, meadows, or shrublands. Most of CA *except* Central Valley, coastal LA and Orange Co., western Imperial Co., and central Riverside Co. Very limited breeding range in southern CA. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3?	Not expected (foraging and nesting); no or marginal habitat, no documented occurrences (nesting) within 5 mi., no eBird records in vicinity, not observed during surveys.
Athene cunicularia Burrowing owl	Nests in rodent burrows, usually in grasslands. Forages in open habitat; increasingly uncomm. in S CA. Occurs through W US/Mex. Sparse in desert scrub but common around irrigated lands. CNDDB tracks burrow sites and some wintering sites.	Fed: BCC Calif: SSC, S3 BLM: S MSHCP: AC c	Occurs; observed on site during focused surveys in 2018. Not observed during focused surveys in 2019 and 2021.
Buteo regalis Ferruginous hawk	Open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and juniper habitats. Great Basin grassland and scrub, pinyon and juniper woodlands, valley and foothill grassland. Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles. Does not breed in southern CA.	Fed: BCC Calif: WL, S3S4 MSHCP: AC	Low (foraging), absent (nesting); potentially suitable habitat foraging habitat (when fields are fallow), outside of breeding range, three documented occurrences within 5 mi. (2008, 4.1 mi. NE; 2007, 3.9 mi ENE; 2008, 2.4 mi. E), a few eBird records in vicinity, not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Buteo swainsoni Swainson's hawk	Grassland/agricultural, large trees for nesting, desert scrub with Joshua tree & Fremont cottonwood overstory, near streams & open fields. Breeds overwhelmingly in Great Basin & Central Valley of California. Seen in migration in southern California. CNDDB only tracks nesting.	Fed: BCC Calif: THR, S3 BLM: S MSHCP: AC	Low (foraging), absent (nesting), may be seen in migration; potentially marginal foraging habitat, outside current breeding range, a few eBird records in vicinity, not observed during surveys.
Calypte costae Costa's hummingbird	Desert and coastal scrub and chaparral in desert, semi-desert and mountain foothills and seasonally in mountains, adjacent open meadows and gardens. Found in NV, UT, AZ, CA and Mexico. Year-round resident in southern CA. CNDDB only tracks nesting.	Fed: BCC Calif: SA, S4	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Campylorhynchus brunneicapillus sandiegensis Coastal cactus wren	Desert scrub and coastal sage scrub with cactus patches; Southern CA and northwestern Baja. Non-migratory. Pairs defend territories throughout the year. Limited to San Diego and Orange Cos.	Fed: BCC Calif: SSC, S3 USFS: S MSHCP: AC	Absent (foraging and nesting); no suitable habitat, outside current range, not observed during surveys.
Chamaea fasciata Wrentit	Chaparral, oak woodland, shrublands, western CA, northwestern Baja, western Oregon. Year-round resident in southern CA range. CNDDB does not track this species.	Fed: BCC Calif: None	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Charadrius nivosus Western snowy plover	Coastal beaches, sand spits, salt pans, river bars. Coastal areas from Washington State south to Baja. Federal listing applies only to the Pacific coastal population. CNDDB only tracks nesting. Year-round resident in southern CA range except for eastern deserts where it is seen in migration.	Fed: THR, BCC Calif: SSC, S2	Absent (foraging and nesting); no suitable habitat, no documented occurrences (nesting) within 5 mi., no eBird records in vicinity, not observed during surveys.
Circus hudsonius (C. cyaneus) Northern harrier	Open habitats with hunting perches, marshes, meadows, grasslands, pastures, croplands, lake and river edges. Nests on the ground. Breeds widely but locally in North America, various portions of CA including Central Valley, central and northern coast, northeastern CA, and southern coastal CA. Does not breed in most of southern CA range. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3 MSHCP: AC	Occurs (foraging), low to moderate (nesting); observed on the site during surveys, potentially suitable nesting habitat, no documented occurrences (nesting) within 5 mi.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Dryobates (Picoides) nuttallii Nuttall's woodpecker	Found in low elevation riparian and oak woodlands, rarely in conifers. Central Valley, Transverse and Peninsular Ranges, Coast Ranges north to Sonoma Co., lower portions of the Cascade Range and Sierra Nevada. Year-round resident throughout coastal mountains of CA. Not tracked in CNDDB.	Fed: BCC Calif: None	Occurs (foraging), moderate (nesting); observed on the site during surveys, potentially marginal nesting habitat.
Elanus leucurus White-tailed kite	Breeds in woodlands and riparian forests, forages over open terrain; Pacific Coast (Calif, northern Baja, Oregon), other scattered localities. Year-round resident in southern CA range. CNDDB only tracks nesting.	Fed: None Calif: FP, S3S4 BLM: S MSHCP: AC	Occurs (foraging), low (nesting); observed on the site during surveys, no or marginal nesting habitat, no documented occurrences (nesting) within 5 mi., five nests within 10 mi. of the site (see Section 3.4.1).
Empidonax traillii extimus Southwestern willow flycatcher	Dense riparian forests, wet mountain meadow systems with standing water for at least part of the breeding season (May to July) & with ample numbers of willow & other associated trees & shrubs. Rare & local in S CA. SW US & N Baja California. CNDDB only tracks nesting.	Fed: END Calif: END, S1 MSHCP: AC a	Absent (foraging and nesting); no suitable habitat, no documented occurrences within 5 mi., not observed during surveys. Habitat assessment found no suitable habitat on the site.
Eremophila alpestris actia California horned lark	Variety of open habitats with low growing vegetation or bare ground, grasslands, rangelands, "bald" hills, mtn. meadows, open coastal plains, fallow fields, alkali flats. Within coastal Sonoma Co. to San Diego Co., San Joaquin Valley & E to foothills.	Fed: None Calif: WL, S4 MSHCP: AC	Occurs (foraging), high (nesting); observed on the site during surveys, potentially suitable nesting habitat.
Haliaeetus leucocephalus Bald eagle	Breed in large trees, usually near major rivers or lakes. Winters more widely. Wide but scattered distribution in N America, esp. coastal regions. CNDDB tracks nesting and wintering.	Fed: Delisted, BGEPA, BCC Calif: END, FP, S3 MSHCP: AC BLM: S USFS: S	Absent (foraging and nesting); no suitable habitat, not observed during surveys.
Icteria virens Yellow-breasted chat	Summer resident, inhabits riparian thickets of willow near watercourses, low dense riparian willow. Migrant and summer resident in CA, northern CA, central coast, eastern Central Valley, coastal southern CA, Colorado River, western US, Canada, Mexico, Central America. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3 MSHCP: AC	Not expected (foraging and nesting); no or marginal habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Lanius ludovicianus Loggerhead shrike	Open areas where small trees, shrubs, and fences can provide suitable perches. Nests in small trees and large shrubs. Throughout much of North America. CNDDB only tracks nesting.	Fed: BCC Calif: SSC, S4 MSHCP: AC	Occurs (foraging), moderate (nesting); observed on the site during surveys, potentially suitable nesting habitat, one documented occurrence (nesting) within 5 mi. (2007, 4.5 mi. NE).
Plegadis chihi White-faced ibis	Freshwater wetlands, shallow lakes, wet meadows, flooded pastures and croplands. Nests in dense, fresh emergent wetland. Salton Sea, local winter visitor along coast, uncommon elsewhere in southern CA and Central Valley. CNDDB only tracks nesting colonies.	Fed: None Calif: WL, S3S4 MSHCP: AC	Not expected (foraging), absent (nesting); no suitable habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.
Polioptila californica Coastal California gnatcatcher	Sage scrub, also chaparral, grasslands, riparian adjacent to or mixed with sage scrub below 2,500 ft elevation. S Ventura Co. to LA, Orange, Riv., San Bern., San D. Cos into Baja CA, Mexico.	Fed: THR Calif: SSC, S2 MSHCP: AC	Occurs (foraging and nesting); observed on the site during surveys including nest sites and breeding pairs.
Selasphorus rufus Rufous hummingbird	Breeds in open or shrubby areas, forest openings, yards and parks. Sometimes forests, thickets, swamps, meadows. Elev. range 0-6000 ft. Migrating birds can be up to 12,600 ft. Wintering birds in oak, pine, and juniper woodlands. Found in Western US and Canada. Generally migrates through southern CA during pre-breeding migratory season (mid-Feb to mid-May). CNDDB only tracks nesting.	Fed: BCC Calif: SA, S1S2	Occurs (foraging), not expected (nesting); observed onsite during surveys, outside breeding range, no documented occurrences (nesting) within 5 mi.
Setophaga petechia Yellow warbler	Migrant and summer resident in southern CA. Riparian, including willow, cottonwood, sycamore, alder, aspen for nesting & foraging, also conifer forest. CNDDB only tracks nesting.	Fed: BCC Calif: SSC, S3S4	Low (foraging and nesting); potentially marginal habitat, no documented occurrences (nesting) within 5 mi., few eBird records in vicinity, not observed during surveys.
Spinus lawrencei Lawrence's goldfinch	Summer breeder, may overwinter. Coastal side of southern and central CA, western edge of southern deserts, east side of Central Valley into northern CA, Colorado River, SW US and northern Mex. Valley foothill hardwood and hardwood-conifer, desert riparian, pinyon juniper, palm oasis, lower montane. Nests in oaks, conifers. CNDDB only tracks nesting.	Fed: BCC Calif: SA, S4	Occurs (foraging), low (nesting); observed on the site during surveys, potentially suitable or marginal nesting habitat, no documented occurrences (nesting) within 5 mi.
Toxostoma redivivum California thrasher	Chaparral. Coastal and foothill areas of California and NW Baja California, Mexico. Resident throughout its range. Not tracked in CNDDB.	Fed: BCC Calif: none	Occurs (foraging), moderate (nesting); potentially suitable or marginal nesting habitat.

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Vireo bellii pusillus Least Bell's vireo	Riparian woodlands, bottomlands. N Mex. & Baja CA into S CA & the S mid-western US. CNDDB only tracks nesting.	Fed: END Calif: END, S2 MSHCP: AC a	Absent (foraging and nesting); no suitable habitat, two documented occurrences within 5 mi. (both along San Jacinto River - 2010, 4.6 mi. ENE; 2002, 4.2 mi. ENE), not observed during surveys. Habitat assessment found no suitable habitat on the site.
Xanthocephalus xanthocephalus Yellow-headed blackbird	Marsh, swamp, wetland. Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds. Nests only where large insects are abundant. CNDDB only tracks nesting.	Fed: None Calif: SSC, S3	Absent (foraging and nesting); no suitable habitat, few eBird records in vicinity, not observed during surveys.
Mammals			
Chaetodipus californicus femoralis Dulzura pocket mouse	Variety of habitats including coastal scrub, chaparral & grassland. Attracted to grass-chaparral edges. Chaparral, coastal scrub, valley and foothill grassland.	Fed: None Calif: SSC, S3	Low to moderate; potentially suitable or marginal habitat, no documented occurrences within 5 mi.
Chaetodipus (Perognathus) fallax Northwestern San Diego pocket mouse	Sandy herbaceous areas, usually in association with rocks or coarse gravel, chaparral, coastal scrub, grasslands. SW CA & NW Baja California (inland to San Bernardino Valley).	Fed: None Calif: SSC, S3S4 MSHCP: AC	Low to moderate; potentially marginal habitat, two documented occurrences within 5 mi. (1992, 3.4 mi. NE; 2009, 3.8 mi. S).
Dipodomys merriami parvus San Bernardino kangaroo rat	Alluvial floodplains and adjacent upland habitats within the San Bernardino, Menifee, and San Jacinto valleys, Riversidean alluvial fan sage scrub.	Fed: END Calif: CanE, SSC, S1 MSHCP: AC c	Absent; no suitable habitat, one documented occurrence within 5 mi. (1938, exact location unknown, mapped 4.4 mi. NNE).
Dipodomys stephensi Stephens' kangaroo rat	Sparse, gently sloping grassland, sometimes at margins of cultivated or disturbed lands; prefers grassland dominated by forbs rather than annual grasses, prefers sparse perennial vegetation; firm soil for burrowing (not too hard or too sandy); may use abandoned gopher burrows; W Riverside Co. and adjacent San Diego Co. San Bernardino County occurrences extirpated. No critical habitat has been designated.	Fed: END Calif: THR, S2 MSHCP: AC	High; potentially suitable habitat, 22 documented occurrences within 5 mi. (1938-2005, closest is 1.2 mi. N).

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Eumops perotis californicus Western mastiff bat	Lowlands (with rare exceptions), many open, semi-arid to arid habitats, conifer and deciduous woodlands, coastal scrub, grasslands, chaparral. Central & S CA, S AZ, NM, SW TX. Roosts in deep rock crevices, high buildings, trees, and tunnels; forages over wide area.	Fed: None Calif: SSC, S3S4 BLM: S	Low to moderate (foraging), low (roosting); potentially suitable foraging habitat, no or marginal roosting habitat, two documented occurrences within 5 mi. (1990, exact location unknown, mapped 2.6 mi. N; 2001, 1.5 mi. NW).
Lasiurus xanthinus Western yellow bat	Valley foothill riparian, desert riparian, desert wash, palm oasis. Roosts in trees, particularly palms. Forages over water and among trees. Desert regions of the SW US. Distributed in S CA, AZ, NM, & TX, into Mexico.	Fed: None Calif: SSC, S3	Not expected (foraging and roosting); no or marginal habitat, one documented occurrence within 5 mi. (1982, exact location unknown, mapped 2.7 mi. N).
Lepus californicus bennettii San Diego black-tailed jackrabbit	Chaparral, coastal, or Riversidean sage scrub with adjacent open grassland. Los Angeles Co. S to San Quintin, Baja California, Mexico.	Fed: None Calif: SSC, S3S4 MSHCP: AC	Occurs; observed on the site during surveys.
Neotoma lepida intermedia San Diego desert woodrat	Arid shrublands, rocky outcrops, & crevices. Cismontane CA., San Luis Obispo to San Diego Co. & NW Baja California. 0-7000 ft. elev. Variety of shrub and desert habitats, primarily associated with rock outcroppings, boulders, cacti, or areas of dense undergrowth. Constructs elaborate middens of sticks and other materials.	Fed: None Calif: SSC, S3S4 MSHCP: AC	Not expected; potentially marginal habitat, no documented occurrences within 5 mi., no middens observed during surveys.
Nyctinomops femorosaccus Pocketed free-tailed bat	Deserts & arid lowlands, pinyon juniper woodlands, desert scrub, riparian scrub, Joshua tree woodland, rocky areas with high cliffs. E Riverside & San Diego Cos. and Imperial Co., through SW US, Baja California, mainland Mexico. Roost mainly in crevices of high cliffs. Few records in So CA. Prefers rocky desert areas with high cliffs or rock outcrops. Feeds over ponds, streams, and arid desert.	Fed: None Calif: SSC, S3	Not expected (foraging and roosting); no suitable habitat, no documented occurrences within 5 mi.
Onychomys torridus ramona Southern grasshopper mouse	Nocturnal, active year-round. Desert scrub, coastal scrub, mixed chaparral, sagebrush, especially scrub habitats with friable soil, prefers low to moderate shrub cover. LA through San Diego counties and northwest Baja.	Fed: None Calif: SSC, S3	Low; potentially marginal habitat, one documented occurrence within 5 mi. (1932, exact location unknown, mapped 4.4 mi. NE).

Species	Habitat and Distribution	Conservation Status	Potential for Occurrence
Perognathus longimembris brevinasus Los Angeles pocket mouse	Nocturnal, active Apr-Aug. Annual grassland, sage scrub, alluvial sage scrub. S California from Rancho Cucamonga (W boundary), San Gorgonio (E), Aguanga & Oak Grove, San Diego (S). Open ground with fine, sandy soils.	Fed: None Calif: SSC, S1S2 MSHCP: AC c	Low; potentially marginal habitat, no documented occurrences within 5 mi.
Perognathus longimembris internationalis Jacumba pocket mouse	Desert riparian, desert scrub, desert wash, coastal scrub and sagebrush. Rarely found on rocky sites.	Fed: None Calif: SSC, S2	Low; potentially marginal habitat, no documented occurrences within 5 mi.
Taxidea taxus American badger	Mountains, deserts, interior valleys where burrowing animals are available as prey & soil permits digging. Throughout Central & W North America.	Fed: None Calif: SSC, S3	Low; potentially suitable habitat, no badger burrows or diggings observed during surveys.

References: CDFW (2021b, 2021c), USFWS (2021), Dudek (2003), RCA (2020); Cornell (2021); eBird (2021); USFS (2013).

"Documented occurrences" refers to species occurrences in the California Natural Diversity Database (CNDDB) unless otherwise noted. For plant species that are not tracked in the CNDDB, records from the Consortium of California Herbaria (CCH) may be used (only CCH records that include map coordinates are utilized). EBird (eBird.org) is an online database of bird distribution and abundance sponsored by the Cornell Laboratory of Ornithology and compiled from observations submitted by citizen scientists. eBird records of bird observations are noted but should be interpreted with caution. eBird records "in vicinity" means records within about a 5-mile radius of the site.

Federal designations: (Federal Endangered Species Act, U.S. Fish and Wildlife Service):

- END: Federally listed, endangered; an animal or plant in danger of extinction within the foreseeable future throughout all or a significant portion of its range.
- THR: Federally listed, threatened; an animal or plant which is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range.
- Cand Candidate for federal listing as threatened or endangered; species that has been studied by the U.S. Fish and Wildlife Service, and the Service has concluded that it should be proposed for addition to the Federal Endangered and Threatened species list.
- Prop Proposed for federal listing as Endangered or Threatened under Section 4 of the Endangered Species Act.
- Delisted: Previously federally listed as endangered or threatened, but is no longer listed (e.g., due to recovery).
- None: The species has no federal conservation status.
- BGEPA: Federal Bald and Golden Eagle Protection Act; protects bald and golden eagles.
- BCC: USFWS Bird of Conservation Concern; migratory and non-migratory bird species (beyond those already designated as Federally threatened or endangered) that represent USFWS highest conservation priorities.

State designations: (California Endangered Species Act, California Dept. of Fish and Wildlife)

- END: State listed, endangered; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.

CanE: Candidate Endangered; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Fish and Game Commission has formally noticed as being under review by the Department of Fish and Wildlife for addition to the list of endangered species, or a species for which the commission has published a notice of proposed regulation to add the species to the list of endangered species.

CanT: Candidate Threatened; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the Fish and Game Commission has formally noticed as being under review by the Department of Fish and Wildlife for addition to the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to the list of threatened species.

THR: State listed, threatened; a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of special protection and management efforts.

RARE: State listed as rare: a native plant species, subspecies, or variety when, although not presently threatened with extinction, it is in such small numbers throughout its range that it may become endangered if its present environment worsens (Native Plant Protection Act of 1977).

SSC: CDFW Species of Special Concern; vertebrate species of concern due to declining population levels, limited ranges, and/or continuing threats that have made them vulnerable to extinction.

FP: Fully Protected; California Fish and Game Code states that Fully Protected species "...may not be taken or possessed at any time and no provision of this code or any other law shall be construed to authorize the issuance of permits or licenses to take any fully protected" species, although take may be authorized for necessary scientific research.

Delisted: Previously state listed as threatened or endangered, but no longer listed (e.g., due to recovery).

SA: CDFW Special Animal; wildlife of state conservation concern.

SH: All California sites are historical, still some hope of rediscovery.

SX: All California sites are historical, presumed extirpated.

PFB: Protected Fur-bearing Mammal under Title 14 of the California Code of Regulations.

None: The species has no state conservation status.

State Rank (S Rank): A reflection of the condition and imperilment of an element (plant, animal, vegetation community) throughout its range within the state. The S ranks are determined through a combination of rarity, threat, and trend factors, weighted more heavily on the rarity factors. Where correct category is uncertain, the S rank includes two categories or a question mark. Older ranks, which need to be updated, may still contain a decimal "threat" rank of .1, .2, or .3, where .1 indicates very threatened status, .2 indicates moderate threat, and .3 indicates few or no current known threats.

S1: Critically imperiled; imperiled in the state because of extreme rarity or some factor(s) making it especially vulnerable to extirpation from the state.

S2: Imperiled; imperiled in the state because of rarity due to very restricted range, very few populations, steep declines, or other factors making it very vulnerable to extirpation from the state or nation.

S3: Vulnerable; vulnerable in the state due to a restricted range, relatively few populations, recent and widespread declines, or other factors making it vulnerable to extirpation. S4: Apparently secure; uncommon but not rare, some cause for long-term concern due to declines or other factors.

S5: Secure; common, widespread, and abundant in the state.

SH: Possibly extirpated; species or community occurred historically in the state, and there is some possibility that it may be rediscovered. The element has not been seen for at least 20 years, but suitable habitat still exists.

SX: Presumed extirpated; species or community is believed to be extirpated from the state.

California Rare Plant Rank (CRPR): The *California Rare Plant Ranks* are a ranking system originally developed by the California Native Plant Society (CNPS) to better define and categorize rarity in California's plants. These ranks were previously known as the CNPS lists but were renamed to the *California Rare Plant Ranks* to better reflect the joint effort among the CNPS, the CDFW, and a wide range of botanical experts, who work together to assign a rarity ranking.

1A: Plants presumed extinct in California and rare/extinct elsewhere.
1B: Plants rare, threatened, or endangered in California and elsewhere.
2A: Plants presumed extirpated in California, but more common elsewhere.
2B: Plants rare, threatened, or endangered in California but more common elsewhere.
3: Plants about which we need more information.
4: Plants of limited distribution.
X.1: Extension to CRPR (e.g., 1B.1); seriously threatened in California.
X.2: Extension to CRPR (e.g., 1B.2); fairly threatened in California.
X.3: Extension to CRPR (e.g., 1B.3); not very threatened in California.
CBR: Considered but rejected.

U.S. Forest Service (USFS) designation:

S: Sensitive; plant and animal species identified by a regional forester that are not listed or proposed for listing under the Federal Endangered Species Act for which population viability is a concern, as evidenced by significant current or predicted downward trends in population numbers or density, or significant current or predicted downward trends in habitat capability that would reduce a species' existing distribution.

Bureau of Land Management (BLM designation:

S: Sensitive; plant and animal species requiring special management consideration to promote their conservation and reduce the likelihood for future listing under the Federal Endangered Species Act. Includes species designated as sensitive by the BLM State Director and all Federal Candidate species and Federal delisted species in the 5 years following delisting. Sensitive species are managed as special status species.

Western Riverside County Multiple Species Habitat Conservation Plan: Applied to species that are covered under state and federal permits for the MSHCP.

NAC: Species Not Adequately Conserved
AC: Species Adequately Conserved
(a): Surveys may be required for these species as part of wetlands mapping as described in Section 6.1.2 of the MSHCP.
(b): Surveys may be required for these species within Narrow Endemic Plant Species survey area as described in Section 6.1.3 of the MSHCP.
(c): Surveys may be required for these species within locations shown on survey maps as described in Section 6.3.2 of the MSHCP.
(d): Surveys may be required for these species within Criteria Area as described in Section 6.3.2 of the MSHCP.
(e): These Covered Species will be considered Adequately Conserved when conservation requirements identified in species-specific conservation objectives have been met. Species-specific conservation objectives for these species are presented in Section 9.0 of the MSHCP. Please refer to Table 9-3 of the MSHCP for specific conservation objectives that must be met for these species prior to including them on the list of Covered Species Adequately Conserved.
(f): These Covered Species will be considered Adequately Conserved when a Memorandum of Understanding is executed with the U.S. Forest Service that addresses management for these species on Forest Service Land. Refer to Table 9-3 of the MSHCP.
No entry: Not a Covered Species

Definitions of occurrence probability:

These definitions provide general guidance. Classifications for individual species may be modified based on biologists' experience and expert opinion.

Occurs: Species was detected during surveys or previously documented on the Project site or adjacent areas.
High: Species documented in the vicinity (i.e., within 5 miles) of the Project site and suitable habitat is present, but species not detected during surveys.
Moderate: Species documented in the vicinity of the Project site or suitable habitat present and site is within geographic and elevational range of the species.

Low:	Species not documented in the vicinity of the Project site or suitable habitat is marginal.
Not Expected:	Species not documented in the vicinity of the Project site and suitable habitat marginal or absent, or site is not within geographic and elevational range of the species.
Absent:	No potential for the species to occur due to lack of habitat, geographic or elevation range, species life history, survey results, etc.
Unknown:	No focused surveys have been performed in the region, and the species' distribution and habitat are poorly known.

APPENDIX C: PRECIPITATION DATA

Precipitation data from the Clark Remote Automatic Weather Station for October 2002 through September 2021, by water year (October 1 through September 30) (WRCC 2021).

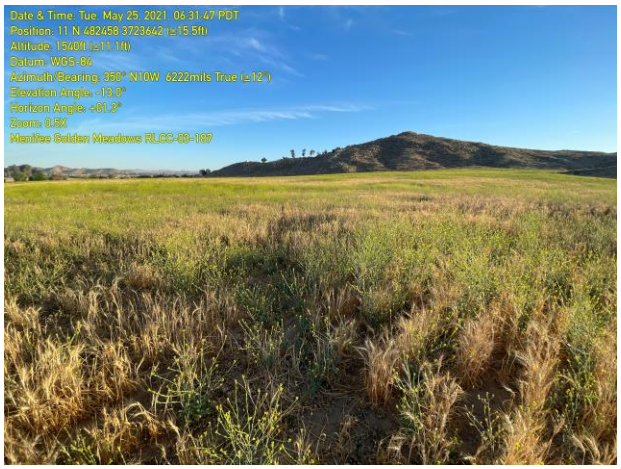
From WRCC (2018)

APPENDIX D: SITE PHOTOGRAPHS

Agricultural fields, south-central area of site facing northwest (05.25.2021).



Agricultural fields, central area of site facing north; slopes with coastal scrub visible in background (05.25.2021).

Agricultural fields after mowing, south-central area of site facing east (11.08.2021).

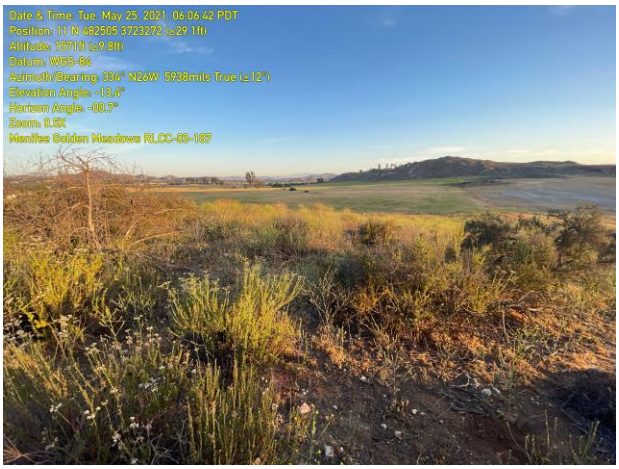
Overview of site after agricultural fields mowed, from slope at north-central edge of site facing south; coastal scrub in foreground (11.08.2021).

California buckwheat scrub, northeastern area of site facing south (05.21.2021).

California buckwheat scrub, northeastern corner of site facing southwest (05.21.2021).

California buckwheat scrub/ruderal, east-central area of site facing southeast (05.21.2021).

California buckwheat scrub/ruderal, northwest area of site facing south (05.25.2021).

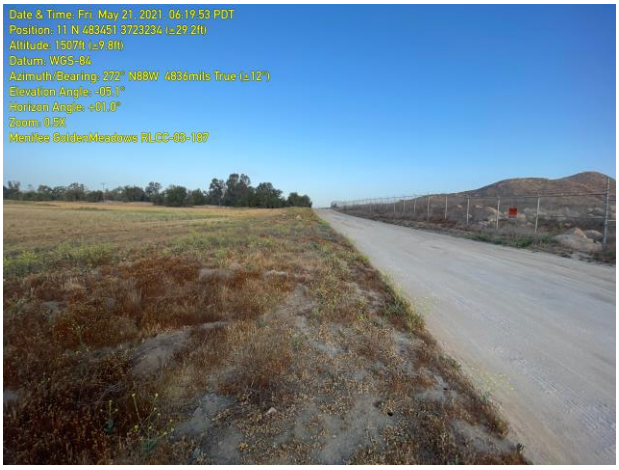


Chamise chaparral, south-central edge of site facing northwest (05.25.2021).

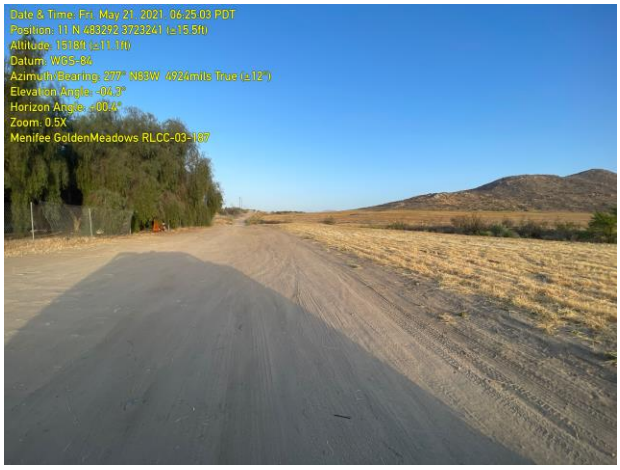
Area of chamise chaparral after it was mowed, south-central edge of site facing west (11.08.2021).

Scattered riparian vegetation along blue-line stream, northwest area of site facing southeast (11.08.2021).

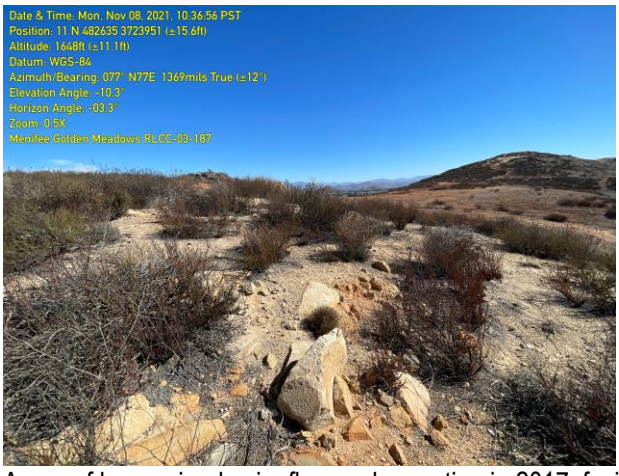
Scattered riparian vegetation along blue-line stream, northwest-central area of site facing north (11.08.2021).



Offsite area along Wickerd Road, facing west (05.21.2021).



Offsite area along Wickerd Road, facing west (05.21.2021).



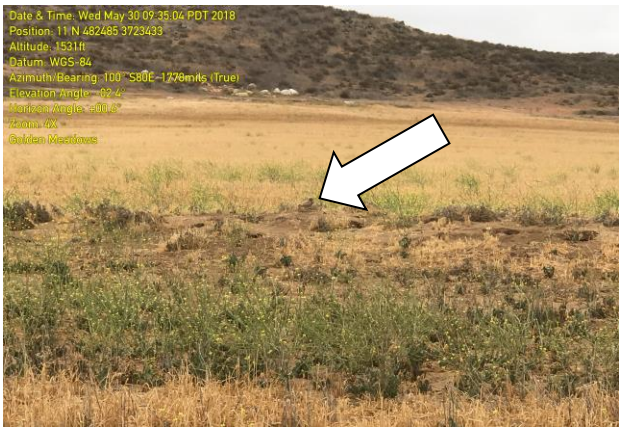
Areas of long-spined spineflower observation in 2017, facing east (11.08.2021). This area has been impacted by OHV use and the species was not observed during surveys in 2018, 2019, and 2021.

Southern California black walnut tree in riparian area, facing north (11.08.2021).

Southern California black walnut tree in riparian area, facing northwest, eucalyptus tree at right (11.08.2021).

Non-native pepper trees along western boundary of site, facing north (05.25.2021). Tree on left is offsite.

Scattered trees in the riparian area, facing south (05.25.2021).



Burrowing owl observed onsite on May 30, 2018. The owl was not observed during subsequent surveys in 2018. No owls or owl sign were observed during surveys in 2019 and 2021.

Burrowing owl burrow in 2018. This burrow was not occupied during surveys in 2019 and 2021.

Location of 2018 burrow in 2021 after agricultural fields were mowed, facing south (11.08.2021). There was no evidence of occupation before or after mowing.

Potentially suitable burrow with no signs of occupation, after agricultural fields mowed, southeast area of site facing east (11.08.2021).

Potentially suitable habitat for burrowing owl and potential burrow locations were thoroughly searched and no evidence of occupation was found in 2019 and 2021.

APPENDIX E: CNDDB FORMS

CNDDB forms for 2021 observations are provided below. The forms were submitted to CDFW online. The CNDDB only tracks nesting for Cooper's hawk and nesting was not observed, so a CNDDB form for this species is not required. The CNDDB does not track Nuttall's woodpecker or wrentit, so CNDDB forms for these species are not required.

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources

Case Number: TR 31194 Lot/Parcel No. _____ EA Number _____

Assessor's Parcel Number(s): 360-300-002, -003, -004, -005, -006, -009, 360-350-001

Date: March 18, 2022

Biological Resources: (Check the level of impact that applies to the following questions.)

Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

a) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

☐ ■ ☐ ☐

b) Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)?

☐ ■ ☐ ☐

c) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, or U. S. Wildlife Service?

☐ ■ ☐ ☐

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ■ ☐ ☐

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources

e) Have a substantial adverse effect on any riparian habitat, or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or the U.S. Fish and Wildlife Service?

☐ ■ ☐ ☐

f) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pools, coastal, etc.) through direct removal, filling, hydrological interruption)?

☐ ■ ☐ ☐

g) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

☐ ■ ☐ ☐

Findings of Fact:

The site is located within the area covered by the MSHCP but is not within the Criteria Area. There is one area of PQP Conserved Lands approximately 0.68 miles north-northeast of the site (Ringing Rock Archaeological Site). Other than the Ringing Rock Site, there are no other PQP or MSHCP Conserved Lands within a mile of the site. The site is not within or near any MSHCP Core Areas or Linkages.

There is one sensitive vegetation community present, arroyo willow thicket.

No state or federally listed plants were observed. Two special status plant species were observed, long-spined spineflower and southern California black walnut.

There is one immature coast live oak and other native and non-native trees present.

Coastal California gnatcatcher present and nesting on the site. White-tailed kite observed during previous surveys, but no nesting detected.

No vernal pools or ponding areas and no fairy shrimp habitat.

Riparian birds (least Bell's vireo, southwestern willow flycatcher, western yellow-billed cuckoo) considered absent.

Special status wildlife species detected: orange-throated whiptail, coastal (western) whiptail, coast horned lizard, Cooper's hawk, southern California rufous-crowned sparrow, great egret, great blue heron (fly over), Bell's sage sparrow, burrowing owl, Costa's hummingbird, wrentit, northern harrier, Nuttall's woodpecker, California horned lark, loggerhead shrike, rufous hummingbird, Lawrence's goldfinch, California thrasher, and San Diego black-tailed jackrabbit.

One (1) adult burrowing owl and an occupied burrow observed in 2018. No owls or owl sign observed in 2019 or 2021.
There is habitat suitable for nesting birds (including raptors) within and adjacent to the site.

The site is not within or adjacent to a wildlife corridor.

A mapped blue-line stream is present and includes MSHCP riparian/riverine habitat as well as state waters/wetlands and federal waters. Regulatory permitting and a DBESP will be required.

Proposed Mitigation:

Preconstruction surveys for burrowing owl.

Preconstruction surveys for nesting birds during nesting season.

Avoidance of riparian habitat and offsite compensation for impacts.

Monitoring Recommended:

Monitoring of active coastal California gnatcatcher nest sites during Project activities recommended.

Monitoring of Project activities that disturb vegetation or soil in and adjacent to the Avoidance/Compatible Use Area is recommended.

Report Summary:

The jurisdictional areas identified on the property include 18,814 sq. ft. (0.43 acre) of ephemeral unvegetated CDFW state waters/streambed (which is also MSHCP Riverine habitat) and 40,451 sq. ft. (0.93 acres) of CDFW state wetland (which is also MSHCP Riparian habitat). Construction of the proposed project will impact 9,541 sq. ft. (0.22 acre) of CDFW state water/streambed (which is also MSHCP Riverine habitat) and 5,702 sq. ft. (0.13 acre) of CDFW state wetland (which is also MSHCP Riparian habitat). The survey also identified 4,397 sq. ft. (0.10 acre) of USACE Waters of the U.S., none of which is USACE federal wetland. The development plan indicates impacts to 1,301 sq. ft. (0.03 acre) of USACE Waters of the U.S. Remaining jurisdictional areas on the site will be incorporated into a Compatible Use Area.

MANAGEMENT SUMMARY

L&L Environmental, Inc. conducted a reconnaissance survey and desktop analysis of Richland Communities ±209.33-acre project (and associated offsite improvement areas) in the City of Menifee, California. The purpose of this work effort was to update and verify a jurisdictional delineation conducted on the subject property by L&L in 2011 and 2019. A recent biological assessment (L&L 2021) addressed other biological resources on the project site and relevant information from that report is included herein.

The purpose of a (preliminary) jurisdictional delineation is to quantify the portion of a property that is subject to the jurisdiction of the U. S. Army Corps of Engineers (USACE), the California Department of Fish and Wildlife (CDFW), and the Regional Water Quality Control Board (RWQCB). A jurisdictional determination is performed to map the wetlands and non-wetland waters that may be subject to regulation by the state or federal agencies, and that may require permits prior to disturbance/construction. All jurisdictional delineations are considered preliminary until verified and accepted by the agencies.

Land use varies within and adjacent to the survey area and includes anthropogenic disturbances such as rural residential areas, active and fallow agricultural areas, unimproved roads, power line easements, off-road vehicle activity, debris piles, and windblown debris. Two unimproved roads are present on the property.

A mapped blueline stream trending from south to north is present within the central portion of the site as well as various other jurisdictional features. No vernal pools or other areas of potential habitat for fairy shrimp are present on the site.

The jurisdictional areas identified on the property include 18,814 sq. ft. (0.43 acre) of ephemeral unvegetated CDFW state waters/streambed (which is also MSHCP Riverine habitat) and 40,451 sq. ft. (0.93 acres) of CDFW state wetland (which is also MSHCP Riparian habitat). Construction of the proposed project will impact 9,541 sq. ft. (0.22 acre) of CDFW state water/streambed (which is also MSHCP Riverine habitat) and 5,702 sq. ft. (0.13 acre) of CDFW state wetland (which is also MSHCP Riparian habitat).

The survey also identified 4,397 sq. ft. (0.10 acre) of USACE Waters of the U.S. (WoUS), none of which is USACE federal wetland. The development plan indicates impacts to 1,301 sq. ft. (0.03 acre) of WoUS.

Per conversation with the agencies, the project proposes to incorporate 9,273 sq. ft. (0.21 acre) of state streambed and 34,749 sq. ft. (0.80 acre) of state wetland, which is also MSHCP Riparian/Riverine habitat, and includes 3,096 sq. ft. (0.07 acre) of WoUS into the onsite Compatible Use Area.

Permits/agreements and a Determination of Biological Equivalence or Superior Preservation (DBESP) according to the Western Riverside County MSHCP will be required before project-related impacts occur.

This document has been prepared to assist in planning and to accompany permit applications or agreements under federal or state law.

1.0) INTRODUCTION

The following report was prepared by L&L Environmental, Inc. (L&L) for Richland Communities. It describes the results of a 2011 jurisdictional delineation conducted on a proposed development located on lands within the City of Menifee as well as 2018/2019 and 2021 reconnaissance surveys and desktop analyses that were undertaken to update and verify the results. This report was prepared to accompany notifications or applications to the U. S. Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW) for permits or agreements under applicable federal and state laws. The project site consists of APNs 360-300-002, -003, -004, -005, -006, -009, and 360-350-001 (totaling ±204.65 acres) and portions of offsite APNs 360-180-009, 360-300-001, -008, 360-350-019, -022, -023, -24, 360-360-009, -010, -011 and 360-380-004 (totaling ±4.68 acres) where improvements are planned.

Our assessment consisted of (1) a review of the jurisdictional delineation conducted by L&L in 2011 (L&L 2012) and 2018/2019 (L&L 2019) and other available information regarding the drainages, and (2) field reconnaissance surveys and desktop analyses, intended to verify and update information in the previous jurisdictional delineations.

1.1) Location

The site is located in the City of Menifee, in Paloma Valley west of Interstate Highway 215 (I-215), south of Newport Road, and east of Murrieta Road (Figure 1). The site is located between Wickerd Road to the south and Garbani Road to the north. The project site is situated in Sections 15 and 16, Township 6 South, Range 3 West, within the USGS Romoland 7.5' series quadrangle map (Figure 2).

The site is generally bounded as follows: to the west by agricultural lands, Evans Road (unimproved), rural residential units and a school; to the east by a mixture of disturbed and relatively undisturbed vacant land, Sherman Road (unimproved), and a Frontier Communications complex beyond; to the north by a mixture of disturbed and relatively undisturbed vacant lands, rural residential areas, Garbani Road (unimproved) and residential developments; and to the south by Wickerd Road (unimproved), rural residential areas and a mix of disturbed and relatively undisturbed lands.

In addition to the main site, offsite improvements areas are included in the project. These are comprised of three separate areas: 1) a 0.5 mile section of Wickerd Road between the

southeast corner of the main site east to Haun Road; 2) an area south of the south-central portion of the main site boundary roughly located between the intersection of Wickerd Road and Bradley Road west to an area just west of Krubsack Road, and 3) an area near the northwest portion of the main site, including Daniel Road to approximately Evans Road to the west with a small area north of and along the northwestern site boundary.

1.2) Proposed Project Description

The Project is identified as Golden Meadows (formerly known as Menifee Assemblage), Tract No. 31194, and consists of construction of 572 single-family residential lots and associated roads and infrastructure (Figure 3). The Project will be constructed in four (4) phases. Offsite impacts include improvements to existing roads and installation of flood control structures. Approximately 32.3 acres in the northeastern portion of the will be designated as a natural open space area. An Environmental Impact Report for the Project was published in 2006 (T&B 2006).

The property also includes an Eastern Municipal Water District (EMWD) tank site. The proposed tank site includes two large water tanks and an access road. The tanks will serve multiple developments, including Golden Meadows. The tank site is located within the tract boundary, but it is not within the proposed Project boundary and is not a part of the Project.

1.3) Project Setting

Much of the subject property has been disturbed in association with historic and current dryland farming and sheep grazing. As a result, these areas do not support native habitat communities. In the historically less disturbed areas of the property, remnants of California buckwheat scrub and chamise chaparral vegetation is present.

A shallow drainage feature and mapped blue-line stream is present trending from the southwest/central to the northwest portion of the site. Much of this area has been impacted by agricultural activities and invasive plants, but several woody riparian species are present in association with this feature. In the offsite impact area, two small drainage features cross Wickerd Road, an existing narrow dirt road that accesses the site from the east. These two drainages have been impacted by road maintenance, invasive plants, and adjacent agricultural activities. The easternmost drainage includes limited riparian vegetation.

Land uses adjacent to the survey area include rural residential, active and fallow agricultural, large animal husbandry, unimproved roads, powerline easements, off-road vehicle activity,

storage, and debris piles. Two unimproved roads are present on the property. One is located along the northern and eastern portion of the property where agricultural areas meet less disturbed sage scrub areas. This unimproved road begins at the eastern terminus of Daniel Road and exits at the southeastern corner of the site near the intersection of Evans Road and Ascot Way. Krubsack Road (unimproved) trends north to south through previously cultivated agricultural fields within the roughly west-central portion of the property and connects with Wickerd Road to the south and Daniel Road to the north.

1.4) Soils and Topography

Soils on the Project site were mapped as Wyman loam (WyC2), Vallecitos loam (VeC2), Porterville clay (PsC), Yokohl loam (YbC and YbE3), Cajalco fine sandy loam (CaC2 and CaD2), Cajalco rocky fine sandy loam (CbF2), Honcut sandy loam (HnC and HnD2), Las Posas loam (LaD2), and Las Posas rocky loam (LkD2 and LkF3) (NRCS 2021) (Figure 4).

The most common soils mapped for the subject property are Wyman loam on the central and western portion of the site (in agricultural areas) and Las Posas rocky loams on vegetated hillsides within the northern and eastern portions of the site. Clay soils are relatively uncommon on the site, but Porterville clay is mapped as present near the southeastern portion of the property. Soils observed onsite range from mostly sandy-loamy within the agricultural areas to rocky loamy on the vegetated hillsides. Cryptobiotic crusts are present, but only within less disturbed portions of the site.

Topographically, much of the site is relatively flat and contains open land with low-relief rocky outcrops. Gently to steeply sloping hills and ridgelines are present within the northeastern portion of the property. The site has a combined maximum vertical relief of roughly 220 feet (67 meters) between the highest and lowest points on the property, with elevation ranging from approximately 1,500 to 1,720 feet (457 to 524 meters) above mean sea level (AMSL).

Surrounding topographic features in the project vicinity include gently to steeply sloping hills and ridgelines interspersed with lower-lying relatively flat areas. Although most surrounding areas of the Paloma Valley are primarily flat, significant topographic features are present northwest and southwest of the property at elevations of approximately 1,760 to 1,820 feet AMSL. Bell Mountain, a significant topographic feature located approximately two (2) miles east of the subject property, lies at 1,848 feet AMSL.

2.0) REGULATORY ENVIRONMENT

2.1) Jurisdictional Determination of Wetlands, “Waters of the U.S.”

The following section describes the regulatory environment prior to the U.S. Environmental Protection Agency (EPA) Proposed Rule (described in Section 2.1.3, below). Three agencies generally regulate activities within streams, wetlands, and riparian areas in California: (1) the U. S. Army Corps of Engineers (USACE) regulates activities under Section 404 of the federal Clean Water Act; (2) the Regional Water Quality Control Board (RWQCB) regulates activities under Section 401 of the federal Clean Water Act (CWA); and (3) the California Department of Fish and Wildlife (CDFW) regulates activities within under California Fish and Game Code Sections 1600-1616.

2.1.1) Federal Clean Water Act, Section 404

Section 404 of the federal Clean Water Act applies to "Waters of the United States" (WoUS). By definition these include waterways that could be used for interstate commerce and their tributaries, including any waters with a nexus with (ultimately flow into) traditional navigable waters. In non-tidal waters, the limits of jurisdiction are "ordinary high water marks" (OHWM) such as stream banks. Where wetlands occur above high water marks, they are considered "adjacent wetlands" and are included within USACE jurisdiction. USACE jurisdiction has often been extended to wetlands not adjacent to WoUS ("isolated wetlands"), such as vernal pools. Under the current administration, there have been recent changes to the definition of USACE jurisdictional waters.

According to the Clean Water Act (as amended in 1977) and the Corps of Engineers Wetlands Delineation Manual (1987), a "wetland" is a site that is "inundated or saturated . . . at a frequency and duration sufficient to support . . . vegetation typically adapted for life in saturated soil conditions. . . ." Soil saturation deprives plant roots of oxygen, limiting the types of plants that can grow. Absence of oxygen leads to reducing chemical conditions (rather than oxidizing conditions) and development of unique soil types (hydric soils). The USACE evaluates wetlands by three criteria: hydrology, soils, and vegetation. Under the federal delineation procedure, a site must normally satisfy all three criteria to be classified as a wetland.

The hydrology criterion evaluates the presence of water based on observed flooding or inundation or on indirect evidence such as high water marks, drift lines, or sediment deposits. The soils criterion is based on "hydric" soil characteristics, such as certain colors and mottling

that develop under wetland conditions. These characteristics generally do not develop in sandy soils found in many southern California streambeds. The vegetation criterion evaluates plant species growing on a site. Most plants cannot survive extended periods of root saturation and are called "obligate upland" species. Others grow almost exclusively in wetlands habitats, while still others may be found growing in both wetlands and uplands. These are called "obligate wetlands" or "facultative wetland" species, respectively.

2.1.2) Federal Clean Water Act, Section 401

The RWQCB has jurisdiction over wetlands, WoUS, and Waters of the State under Section 401 of the CWA and the Porter-Cologne Water Quality Control Act (Porter-Cologne) under the California Water Code (§ 13000, et. seq.) Permitting is required for activities that will result in a discharge of soils, nutrients, chemicals, detrital materials, or other pollutants into WoUS, Waters of the State, or adjacent wetlands that will affect the water quality of those bodies and the watershed.

2.1.3) Evaluation Criteria

According to the Clean Water Act (as amended in 1977) and the Army Corps of Engineers Wetlands Delineation Manual (1987), a "wetland" is a site that is "inundated or saturated . . . at a frequency and duration sufficient to support . . . vegetation typically adapted for life in saturated soil conditions. . . ." Soil saturation deprives plant roots of oxygen, limiting the types of plants that can grow. Absence of oxygen leads to reducing chemical conditions (rather than oxidizing conditions) and development of unique soil types (hydric soils). The USACE evaluates wetlands by three criteria: hydrology, soils, and vegetation. Under the federal delineation procedure, a site must normally satisfy all three criteria to be classified as a wetland. At its discretion, CDFW may regard a site as a wetland based on only one listed criterion.

The hydrology criterion evaluates the presence of water based on observed flooding or inundation or on indirect evidence such as high water marks, drift lines, or sediment deposits. The soils criterion is based on "hydric" soil characteristics, such as certain colors and mottling that develop under wetland conditions. (These characteristics generally do not develop in sandy soils found in many southern California streambeds.) The vegetation criterion evaluates plant species growing on a site. Most plants cannot survive extended periods of root saturation and are called "obligate upland" species. Others grow almost exclusively in wetlands habitats, while still others may be found growing in both wetlands and uplands. These are called "obligate wetlands" or "facultative wetlands" species, respectively. While the federal USACE

criteria are used to evaluate the presence or absence of wetlands within the project site, the determination of state wetland status is not based on the combined presence of the three criteria because the state can take jurisdiction of any one of the three: (1) the presence of water open or saturated soils, (2) presence of vegetation including riparian or wetland species, and/or (3) water-modified or oxygen-depleted soils.

Traditional Navigable Waters (TNWs) and Relatively Permanent Waters (RPWs), where water flows for three (3) or more months per year, are jurisdictional by definition; however, for Non-Relatively Permanent Waters (Non-RPWs) data and analysis supporting a "significant nexus" must be provided to justify USACE jurisdiction. Erosional features (i.e., small and large gullies), swales, and excavated roadside ditches are usually not considered jurisdictional.

According to the "U. S. Army Corps of Engineers Jurisdictional Determination Form Instructional Guidebook" (5/30/2007):

> Ephemeral waters in the arid west that are tributaries may have a significant nexus to a TNW. For example, in some cases they may serve as a critical transitional area between the upland environment and the traditional navigable waters. Such ephemeral tributaries, with the associated riparian corridor, may provide refugia, foraging and breeding opportunities in areas that may have limited stands of vegetation and water due to the environmental conditions of the arid southwest. During and following precipitation events, ephemeral tributaries collect and transport water or sometimes sediment from the upper reaches of the landscape to the traditional navigable waters. These ephemeral tributaries, and associated riparian corridors, may provide habitat for wildlife and aquatic organisms. These biological and physical processes may further support nutrient cycling, sediment retention and transport, pollutant trapping and filtration, and improvement of water quality, functions that may affect the integrity of a TNW.
>
> . . . Specifically, an evaluation will be made of the frequency, volume, and duration of flow; proximity to the TNW; capacity to transfer nutrients and organic carbon vital to support food webs; habitat services such as providing spawning areas for important aquatic species; functions related to the maintenance of water quality such as sediment trapping; and other relevant factors. In some cases, even tributaries that are relatively distant from a TNW may have a significant nexus with the TNW.

The following section describes the proposed changes to the Regulatory Environment which may occurred as a result of the EPA Proposed Rule. On December 11, 2018, the EPA and Department of the Army signed a proposed rule revising the definition of "waters of the United States" to clarify federal authority under the Clean Water Act. The agencies' proposal is the

second step in a two-step process to review and revise the definition of "waters of the United States" consistent with the February 2017 Presidential Executive Order entitled "Restoring the Rule of Law, Federalism, and Economic Growth by Reviewing the 'Waters of the United States' Rule." The proposed definition would replace the approach in the 2015 Rule and the pre-2015 regulations:

(a) For purposes of the Clean Water Act, 33 U.S.C. 1251 et seq. and it's implementing regulations, subject to the exclusions in paragraph (b) of this section, the term **"waters of the United States" means**:

(1) Waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including the territorial seas and waters which are subject to the ebb and flow of the tide;

(2) Tributaries of waters identified in paragraph (a)(1) of this section;

(3) Ditches that satisfy any of the conditions identified in paragraph (a)(1) of this section, ditches constructed in a tributary or that relocate or alter a tributary as long as those ditches also satisfy the conditions of the tributary definition, and ditches constructed in an adjacent wetland as long as those ditches also satisfy the conditions of the tributary definition;

(4) Lakes and ponds that satisfy any of the conditions identified in paragraph (a)(1) of this section, lakes and ponds that contribute perennial or intermittent flow to a water identified in paragraph (a)(1) of this section in a typical year either directly or indirectly through a water(s) identified in paragraphs (a)(2) through (6) of this section or through water features identified in paragraph (b) of this section so long as those water features convey perennial or intermittent flow downstream, and lakes and ponds that are flooded by a water identified in paragraphs (a)(1) through (5) of this section in a typical year; (5) Impoundments of waters identified in paragraphs (a)(1) through (4) and (6) of this section; and (6) Adjacent wetlands to waters identified in paragraphs (a)(1) through (5) of this section.

(b) **The following are not "waters of the United States":**

(1) Waters or water features that are not identified in paragraphs (a)(1) through (6) of this section;

(2) Groundwater, including groundwater drained through subsurface drainage systems;

(3) Ephemeral features and diffuse stormwater run-off, including directional sheet flow over upland;

(4) Ditches that are not identified in paragraph (a)(3) of this section;

(5) Prior converted cropland;

(6) Artificially irrigated areas, including fields flooded for rice or cranberry growing, that would revert to upland should application of irrigation water to that area cease;

(7) Artificial lakes and ponds constructed in upland (including water storage reservoirs, farm and stock watering ponds, and log cleaning ponds) which are not identified in paragraph (a)(4) or (a)(5) of this section;

(8) Water-filled depressions created in upland incidental to mining or construction activity, and pits excavated in upland for the purpose of obtaining fill, sand, or gravel;

(9) Stormwater control features excavated or constructed in upland to convey, treat, infiltrate or store stormwater run-off;

(10) Wastewater recycling structures constructed in upland, such as detention, retention and infiltration basins and ponds, and groundwater recharge basins; and

(11) Waste treatment systems.

(c) **Definitions**. In this section, the following definitions apply:

(1) **Adjacent wetlands**. The term adjacent wetlands means wetlands that abut or have a direct hydrologic surface connection to a water identified in paragraphs (a)(1) through (5) of this section in a typical year. Abut means to touch at least at one point or side of a water identified in paragraphs (a)(1) through (5) of this section. A direct hydrologic surface connection occurs as a result of inundation from a paragraph (a)(1) through (5) water to a wetland or via perennial or intermittent flow between a wetland and a

paragraph (a)(1) through (5) water. Wetlands physically separated from a paragraph (a)(1) through (5) water by upland or by dikes, barriers, or similar structures and also lacking a direct hydrologic surface connection to such waters are not adjacent.

(2) **Ditch**. The term ditch means an artificial channel used to convey water.

(3) **Ephemeral**. The term ephemeral means surface water flowing or pooling only in direct response to precipitation (e.g., rain or snow fall).

(4) **High tide line**. The term high tide line means the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds, such as those accompanying a hurricane or other intense storm.

(5) **Intermittent**. The term intermittent means surface water flowing continuously during certain times of a typical year and more than in direct response to precipitation (e.g., seasonally when the groundwater table is elevated or when snowpack melts).

(6) **Ordinary high water mark**. The term ordinary high water mark means that line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

(7) **Perennial**. The term perennial means surface water flowing continuously year-round during a typical year.

(8) **Prior converted cropland**. The term prior converted cropland means any area that, prior to December 23, 1985, was drained or otherwise manipulated for the purpose, or having the effect, of making production of an agricultural product possible. EPA and the Corps will recognize designations of prior converted cropland made by the Secretary of Agriculture. An area is no longer considered prior converted cropland for purposes of

the Clean Water Act when the area is abandoned and has reverted to wetland, as defined in paragraph (c)(15) of this section. Abandonment occurs when prior converted cropland is not used for, or in support of, agricultural purposes at least once in the immediately preceding five years. For the purposes of the Clean Water Act, the EPA Administrator shall have the final authority to determine whether prior converted cropland has been abandoned.

(9) **Snowpack**. The term snowpack means layers of snow that accumulate over extended periods of time in certain geographic regions and high altitudes (e.g., in northern climes and mountainous regions).

(10) **Tidal waters** and waters subject to the ebb and flow of the tide. The terms tidal waters and waters subject to the ebb and flow of the tide mean those waters that rise and fall in a predictable and measurable rhythm or cycle due to the gravitational pulls of the moon and sun. Tidal waters and waters subject to the ebb and flow of the tide end where the rise and fall of the water surface can no longer be practically measured in a predictable rhythm due to masking by hydrologic, wind, or other effects.

(11) **Tributary**. The term tributary means a river, stream, or similar naturally occurring surface water channel that contributes perennial or intermittent flow to a water identified in paragraph (a)(1) of this section in a typical year either directly or indirectly through a water(s) identified in paragraphs (a)(2) through (6) of this section or through water features identified in paragraph (b) of this section so long as those water features convey perennial or intermittent flow downstream. A tributary does not lose its status as a tributary if it flows through a culvert, dam, or other similar artificial break or through a debris pile, boulder field, or similar natural break so long as the artificial or natural break conveys perennial or intermittent flow to a tributary or other jurisdictional water at the downstream end of the break. The alteration or relocation of a tributary does not modify its status as a tributary as long as it continues to satisfy the elements of this definition.

(12) **Typical year**. The term typical year means within the normal range of precipitation over a rolling thirty-year period for a particular geographic area.

(13) **Upland**. The term upland means any land area that under normal circumstances does not satisfy all three wetland delineation criteria (i.e., hydrology, hydrophytic vegetation, hydric soils) identified in paragraph (c)(15) of this section, and does not lie below the ordinary high water mark or the high tide line of a water identified in paragraph (a)(1)

through (6) of this section. Waters identified in paragraphs (a)(1) through (6) of this section are not upland.

(14) **Waste treatment system**. The term waste treatment system includes all components, including lagoons and treatment ponds (such as settling or cooling ponds), designed to convey or retain, concentrate, settle, reduce, or remove pollutants, either actively or passively, from wastewater prior to discharge (or eliminating any such discharge).

(15) **Wetlands**. The term wetlands means areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

2.1.4) Federal Clean Water Act, Section 401

The RWQCB has jurisdiction over wetlands, WoUS, and Waters of the State under Section 401 of the CWA and the Porter-Cologne Water Quality Control Act (Porter-Cologne) under the California Water Code (§ 13000, et seq.) Permitting is required for activities that will result in a discharge of soils, nutrients, chemicals, detrital materials, or other pollutants into WoUS, Waters of the State, or adjacent wetlands that will affect the water quality of those bodies and the watershed.

At the time of the publication of this report no clear direction as to the new rule was available, consequently we have submitted this report assuming the presence of Federal Waters of the US. In the event that the EPA Proposed Rule goes into effect, L&L will revise this report to indicate no Federal Waters are present on the property.

2.1.5) California Fish and Game Code, Section 1600

The CDFW, through provisions of the California Fish and Game Code (Sections 1600-1616), is empowered to issue agreements (“Lake and Streambed Alteration Agreements”) for projects that will adversely affect wildlife habitat associated with any river, stream, or lake edges. The Lake and Streambed Alteration Agreement will typically include required measures to mitigate impacts.

Sections 1600-1616 of the California Fish and Game Code apply to stream channels, defined elsewhere in the Code as follows:

"A stream is a body of water that flows at least periodically through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation."

The state definition does not specify a flow rate or inundation frequency and provides no clear distinction between jurisdictional and non-jurisdictional lands.

While the federal USACE criteria (hydrology, soils, and vegetation) are used to evaluate the presence or absence of wetlands within the project site, the determination of state wetland status is not based on the combined presence of the three criterion because the state can take jurisdiction of any one of the three: (1) the presence of open water or saturated soils, (2) presence of vegetation including riparian or wetland species, and/or (3) water-modified or oxygen-depleted soils.

2.2) Western Riverside County Multiple Species Habitat Conservation Plan

The County of Riverside, including eight (8) additional land jurisdictions and 14 cities, have prepared a Multiple Species Habitat Conservation Plan (MSHCP) for western Riverside County (Dudek 2003a, 2003b). The MSHCP will build upon existing preserves and provide connectivity and wildlife corridors throughout the region. The MSHCP proposes to conserve approximately 500,000 acres and 146 different species.

The MSHCP was approved by the county on June 17, 2003 and an Implementation Agreement (IA) between the USFWS, the CDFW, and the County was executed and an associated USFWS Section 10(a)(1)(B) Permit (No. TE-088609) was issued on June 22, 2004. The permit grants take authorization for certain species identified in the permit as "Covered Species Adequately Conserved."

The MSHCP establishes seven (7) core reserve areas and associated linkages between proposed and existing core areas. The MSHCP divides areas into Cells using USGS coordinates. According to the Riverside County Integrated Project website parcels that compose the current project site are located within Sun City/Menifee Valley Area Plan. Conservation efforts for the project site will be evaluated with regard to sensitive species identified as not adequately conserved and observed onsite, riverine/riparian or vernal pool habitat and their associated sensitive species (if located onsite), fairy shrimp, jurisdictional areas, and sage scrub.

MSHCP Section 6.1.2 (Riparian/Riverine Habitat)

Section 6.1.2 of the MSHCP requires an assessment of the potentially significant effects of the proposed project on Riparian/riverine areas, and vernal pools as currently required by CEQA using available information augmented by project-specific mapping. Riparian/riverine areas and vernal pools are defined as follows:

- Riparian/riverine Areas are lands that have flow for all or a portion of the year and which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.

- Vernal pools are seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. The determination that an area exhibits vernal pool characteristics, and the definition of the watershed supporting vernal pool hydrology, must be made on a case-by case basis. Such determinations should consider the length of the time the area exhibits upland and wetland characteristics and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be obtained from its history, vegetation, soils, and drainage characteristics, uses, to which it has been subjected, and weather and hydrologic records.

With the exception of wetlands created for the purpose of providing wetlands habitat or resulting from human actions to create open waters or from the alteration of natural stream courses, areas demonstrating characteristics as described above which are artificially created are not included in these definitions.

3.0) METHODS

3.1) Literature Review

Potential occurrence of state and federal wetlands and waters on the project site were evaluated through a literature review including the jurisdictional delineation conducted by L&L in 2011 (L&L 2012) and updated in 2018/2019 (L&L 2019) as well as reports of other previous surveys of the site, as needed (L&L 2003-2021). Literature reviewed also included soils maps and descriptions (Knecht 1971), topographic maps (USGS 1979), and the list of wetland plants in California (Appendix O to the Delineation Manual). Recent and historical aerial photographs of the project site and jurisdictional areas were reviewed and helped document the slow decline of the riparian habitat onsite. These images dated from 1938 through 2021 (Google Earth 2021, NETRonline 2021).

3.2) Jurisdictional Delineation Survey Methods

Soil maps and descriptions of local soils were reviewed (NRCS 2018). Soils mapped on the project site were listed and evaluated for their properties relating to potential wetlands. Soil conditions onsite were noted during field visits. Soil color characteristics were evaluated using a "Munsell color chart."

During field surveys, vegetation growing within features was examined. Dominant plant species were listed along with any potential indicators of wetland conditions. The U. S. Army Corps of Engineers (Corps), as part of an interagency effort with the U. S. Environmental Protection Agency (EPA), the U. S. Fish and Wildlife Service (FWS), and the U. S. Department of Agriculture Natural Resources Conservation Service (NRCS), has developed a National Wetland Plant List (NWPL). The NWPL is used to determine whether the hydrophytic vegetation parameter is met when conducting wetland determinations under the Clean Water Act and the Wetland Conservation Provisions of the Food Security Act. Other applications of the list include wetland restoration, establishment, and enhancement projects. The list was effective on May 1, 2016 and is used in any wetland delineation performed after this date. Delineations received prior to this date may still use the 2014 NWPL or may choose to use the 2016 list. The reference list used must be identified on any wetland delineation/determination forms. The vegetation criterion for wetlands is satisfied if half or more of the dominant plant species in an area are ranked as "obligate wetland," "facultative wetland," or "facultative" species (OBL, FACW, or FAC, respectively, see Table 1).

A recent biological assessment (L&L 2021) field reconnaissance, May and June 2021, addressed vegetation and other biological resources on the project site, which aided in the mapping of reduced arroyo willow/mulefat wetland habitats. This field reconnaissance supported by a desktop analysis of recent aerial images (Google Earth 2021) was used to map current conditions and identify changes from the 2011 and 2018/2019 jurisdictional delineations.

Table 1. Summary of Wetlands Vegetation Criteria

Category	Probability
Obligate Wetland (OBL)	Almost always occur in wetlands (estimated probability >99%)
Facultative Wetland (FACW)	Usually occur in wetlands (Estimated probability 67%-99%)
Facultative (FAC)	Equally likely to occur in wetlands and non-wetlands (est. probability 34%-66%)
Facultative Upland (FACU)	Usually occur in non-wetlands (estimated probability 67%-99%)
Obligate Upland (UPL)	Almost always occur in non-wetlands (estimated probability >99%)

3.3) MSHCP Riparian/Riverine and Vernal Pools

In conformance with the MSHCP, this report addresses riparian/riverine areas and vernal pools within the feature descriptions of each system. Where riparian vegetation is associated with features (and to the extent that it is native to California), we considered it suitable for a designation as riparian under the MSHCP. Where flows evidence some level of energy, at least ephemerally, we considered them riverine in the broadest sense.

To meet the definition of a vernal pool, three (3) factors must be addressed: suitable soils and soils conditions, proper hydrology, and one or more indicator species.

4.0) RESULTS

4.1) Literature Review Results

The 2011 jurisdictional delineation conducted by L&L found that the jurisdictional areas identified on the project site were calculated as 6,080 sq. ft. (0.140 acre) of CDFW unvegetated state streambed and 50,634 sq. ft. (1.162 acre) of CDFW state wetland. The survey also identified 2,631 sq. ft. (0.060 acre) of USACE WoUS, none of which is USACE federal wetland.

The 2018 update to the jurisdictional delineation incorporated two culverts along Wickerd Road, resulting in increased offsite impacts to state and federal jurisdictional features. Jurisdictional areas identified within the property include 6,657 sq. ft. (0.153 acre) of CDFW unvegetated state waters/streambed (which is also MSHCP Riverine habitat) and 52,627 sq. ft. (1.208 acres) of CDFW state wetland (which is also MSHCP Riparian habitat). The survey also identified 2,828 sq. ft. (0.065 acre) of USACE WoUS, none of which is USACE federal wetland.

A review of recent and historic aerials shows that the project site has been under cultivation since at least 1938 (Google Earth 2021, NETRonline 2021). The drainage is visible in 1938 but appears to include little shrubby vegetation. On the aerials taken in 1967 and 1978, the drainage does not appear to include any shrubby vegetation. By 1996, the drainage appears to have patches of vegetation, assumed to be native riparian shrubs and trees, along some portions of its length on the project site. In aerials dated from 2002 through 2021, the vegetation in the drainage becomes visibly less dense and shrinks in most places to individual or very small bunches of trees and bushes. This corresponds to observations during surveys by L&L from 2003 through 2021, which indicate that riparian vegetation has declined considerably in recent years and portions of the riparian area have been incorporated into the croplands.

4.2) Vegetation Communities

Much of the subject property has been disturbed by historic and current cultivation and sheep grazing and does not support native habitat. Less disturbed areas are present, primarily in the northeastern portions of the site, with a mixture of disturbed and relatively undisturbed California buckwheat scrub and chamise chaparral. Sparse riparian vegetation and trees are found along a portion of the USGS mapped blue-line stream area in the northwestern/central portion of the site (Figure 5). A list of all plants and wildlife observed on the site is provided in Appendix C.

4.2.1) California Buckwheat Scrub

Relatively undisturbed California buckwheat scrub (previously Holland Riversidean sage scrub) is present on the eastern and northern (primarily northeastern) portion of the site on south, west, and east-facing slopes containing numerous rocky outcrops. Native shrubs and other conspicuous plants commonly observed in these areas include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and white sage (*Salvia apiana*). Other conspicuous plants include brittlebush (*Encelia farinosa*), yellow bush penstemon (*Keckiella antirrhinoides*), wishbone bush (*Mirabilis laevis* var. *crassifolia*), sweetbush (*Bebbia juncea*), blue elderberry (*Sambucus nigra* ssp. *cerulea*), and black sage (*Salvia mellifera*). Open patches can be found throughout portions of the buckwheat scrub onsite containing a mixture of native and non-native annuals.

4.2.2) Chamise Chaparral

Small patches (or islands) of remnant chamise chaparral (*Adenostema fasciculatum* Shrubland Alliance) or chamise–black sage chaparral (*Adenostema fasciculatum–Salvia mellifera* Shrubland Alliance) (previously Holland northern mixed chaparral) were observed, excluding the east-central property boundary where some relatively dense stands remain and mix with California buckwheat scrub (especially just offsite to the east). Common species found in the chaparral areas onsite are chamise (*Adenostoma fasciculatum*), black sage, and other perennials. A poorly developed understory is usually present in association with chaparral areas and is characteristic of areas observed on the subject site and in adjacent areas.

4.2.3) Arroyo Willow Thickets and Mulefat Thickets

Arroyo willow thickets (*Salix lasiolepis* Shrubland Alliance) and mulefat thickets (*Baccharis salicifolia* Shrubland Alliance) (previously Holland southern arroyo willow riparian and mulefat scrub) are dependent on the presence of at least periodic surface or subsurface water. The northwestern portion of the site contains a degraded USGS mapped blue-line stream sparsely inhabited by arroyo willow (*Salix lasiolepis*), mulefat (*Baccharis salicifolia*), or a combination of these species. A single Fremont cottonwood tree (*Populus fremontii* ssp. *fremontii*) and scattered non-native tamarisks (*Tamarix* species) were also observed. The understory is dominated by mostly weedy annuals, including (but not limited to) short-pod mustard, annual sunflower, fiddleneck, Spanish clover (*Acmispon americanus*), wild radish (*Raphanus sativus*), mayweed (*Anthemis cotula*), prickly lettuce (*Lactuca serriola*), and several non-native grasses, including common wheat (*Triticum aestivum*) and oat (*Avena* species).

Surface water was not observed within any of the onsite drainage features during biological surveys in 2013 or 2017 and none was observed during the jurisdictional delineation in 2011 and field reconnaissance in 2018 or 2021. These areas appeared to be considerably less densely populated with riparian shrubs and trees in 2021, when compared to previous surveys. This may be due to the prolonged drought that affected this area in recent years (approximately 2010 to 2016).

4.2.4) Agriculture and Disturbed/Ruderal

Agriculture is not included under the more recent Sawyer et al. (2009) classification utilized by CDFW. Disturbed/ruderal areas that are strongly dominated by annual non-natives may be classified as semi-natural stands, such as *Brassica* (*nigra*) and Other Mustards Semi-natural Herbaceous Stands or *Bromus rubens—Schismus* (*arabicus*, *barbatus*) Semi-natural Herbaceous Stands.

The majority of the site has been under consistent cultivation, mainly dry-farmed wheat crops. Invasive plants were observed uncommonly within flatland portions of the site, including lamb's quarters (*Chenopodium murale*), calabazilla (*Cucurbita foetidissima*), and knotweed (*Polygonum aviculare*).

Disturbed habitat includes unvegetated areas (such as roads) and areas that contain mostly non-native plant species, including ornamentals and ruderal invasive species. Some non-native and weedy species have invaded these areas, including short-pod mustard, foxtail chess, red-stemmed filaree (*Erodium cicutarium*), and various non-native grasses. Other non-native plant species observed in these areas include horehound (*Marrubium vulgare*), Russian thistle (*Salsola tragus*), and tumbling pigweed (*Amaranthus albus*).

4.3) State and Federal Jurisdictional Areas

The nearest Traditionally Navigable Water (TNW) is Canyon Lake (the nearest point of which is approximately 3 miles straight northwest of the project area). Canyon Lake connects to Lake Elsinore and on to the Pacific Ocean (Figure 6). However, between the Paloma Valley High School Channel and Canyon Lake there is a flood plain, so very high precipitation would be required for any surface water to reach Canyon Lake. All features onsite match Cowardin Code R6 (Riverine, Ephemeral).

Land use and cultivation patterns changed slightly over the years of L&L studies on the property beginning in 2003, during which annual rainfall levels have fluctuated. During each of the calendar years between 2003, 2006, 2011, 2017, 2018 and 2019 when L&L studied or otherwise visited the property, wheat crop propagation was occurring on the cleared portions of land surrounding the riparian vegetation. Dry areas and gaps in the vegetation appear to have been incorporated into the wheat crop production. Downstream, the development of the adjacent tract has created a large paseo and this is "misaligned" with the historic blue-line, resulting in some shifting of the waters/riparian vegetation in our study area.

Jurisdictional areas identified within the property include 18,814 sq. ft. (0. 43 acre) of CDFW unvegetated state waters/streambed (which is also MSHCP Riverine habitat) and 40,451 sq. ft. (0.93 acres) of CDFW state wetland (which is also MSHCP Riparian habitat). The survey also identified 4,397 sq. ft. (0. 10 acre) of USACE WoUS, none of which is USACE federal wetland.

Feature 1

Feature 1 (F1) runs from the center portion of the property to the northwestern boundary. This feature measures 1,128 linear feet (lf) and runs from south to north. Feature 1 is comprised of 6,842 sq. ft. of CDFW state streambed (MSHCP Riverine habitat), 15,916 sq. ft. of CDFW wetland (MSHCP Riparian habitat) and 1290 sq. ft. (430 lf) of WoUS.

Feature 1b

Feature 1b (F1b) is an isolated feature that measures 358 lf. and runs from southeast to northwest within the center of the site. It is comprised of 1,797 sq. ft. of CDFW state streambed (MSHCP Riverine habitat), 2,751 sq. ft. of CDFW wetland (MSHCP Riparian habitat) and 716 sq. ft. (358 lf) of WoUS. Observations in the field, verified by agency personnel, have determined that the feature is isolated and there is no evidence of surface connection.

March 2022

Figure 6

Connection to Pacific Ocean
(Photo obtained from Google Earth, 6-7-2012)

Golden Meadows, TT 31194
City of Menifee, California

Feature 2

Feature 2 (F2) measures 1042 lf and runs from south to north within the northwestern portion of the site parallel to Feature 1. Feature 2 is comprised of 8,275 sq. ft. of CDFW state streambed (MSHCP Riverine habitat), 20,913 sq. ft. of CDFW wetland (MSHCP Riparian habitat) and 1806 sq. ft. (602 lf) of WoUS.

Feature 3

This "feature" shows no evidence of beds or banks. No jurisdictional streambed is present.

Feature 4

This offsite feature is the easternmost of the two small drainages that cross Wickerd Road. It measures 188 lf; 1,289 sq. ft. of CDFW state streambed (MSHCP Riverine habitat), 871 sq. ft. of CDFW wetland (MSHCP Riparian habitat) and 325 sq. ft. of WoUS (130 lf).

Feature 5

This offsite feature is the westernmost of the two small drainages that cross Wickerd Road. It measures 130 lf; 611 sq. ft. of CDFW state streambed (MSHCP Riverine habitat), with no CDFW wetland or MSHCP Riparian habitat present and 260 sq. ft. WoUS (130 lf).

Cubic yards (cy) of fill is calculated for WoUS as follows: Feature 1 - 0 cy, Feature 1b - 239 cy, Feature 2 - 0 cy, Feature 3 - 0 cy, Feature 4 – 45 cy, and Feature 5 - 5 cy, for a total proposed fill in WoUS of 289 cy of fill.

Unconnected Features

Several other unconnected features were identified from aerial photos and were analyzed in the field (Figure 7). All of these features appear to be erosional and related to an unimproved road system. The area surrounding these features is highly disturbed and, at the time of our fieldwork, showed no connection to other features. Further, they neither received nor transported flows off property. As a result, we did not include them in further discussions.

Post-project BMPs

Post-construction BMPs include minimizing urban runoff, minimizing impervious footprint, conserving natural areas, and minimizing Directly Connected Impervious Areas (DCIAs). BMPs

have been provided in order to address water quality in low flows and first flush storm runoff, as well as to control post-construction peak flow volumes.

A combination of detention basins and infiltration basins will be constructed on site as post-construction Best Management Practices. The design of these facilities is in accordance with published standards from the Riverside County Flood Control and Water Conservation District. The project proponent will construct the facility according to local standards, requirements, and specifications, and will maintain the facility until the Homeowner's Association is established. Upon formation of the HOA, they will assume maintenance responsibilities, which will be funded through monthly homeowner assessments.

4.4) MSHCP Riparian/Riverine and Vernal Pool Habitat

Under MSHCP Volume 1 Section 6.1.2, areas associated with wetland and streambed systems must be evaluated for consideration as riparian/riverine or vernal pool habitat. Riparian/riverine areas are defined within the MSHCP as:

> ". . . lands which contain Habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." MSHCP Vol. 1, Section 6.1.2.

The subject site contains woody water dependent vegetation. Arroyo willow (*Salix lasiolepis*), cottonwood (*Populus fremontii*), and mulefat (*Baccharis salicifolia*) are present within the mapped features (Figure 5). Fresh water flows through the ephemeral stream that is present and mapped as a USGS blueline.

Vernal pools are defined within the MSHCP as:

> ". . . seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season. Obligate hydrophytes and facultative wetlands plant species are normally dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. . . ." MSHCP Vol. 1, Section 6.1.2.

Soil types within the study area are not consistent with an alkali playa or vernal pool complex and pools or depressions characteristic of vernal habitat were not noted as present on the subject property. No MSHCP species listed for protection associated with riparian/riverine areas and vernal pools were observed. No fairy shrimp or fairy shrimp habitat was observed during this study.

The updated jurisdictional delineation found 18,814 sq. ft. (0.43 acre) of Western Riverside County MSHCP Riverine habitat and 40,451 sq. ft. (0.93 acres) of MSHCP Riparian habitat.

5.0) AVOIDANCE MINIMIZATION AND MITIGATION STRATEGY

5.1) Evaluated Alternatives

Five (5) alternatives were examined during development planning regarding impacts to jurisdictional areas:

1. **Proposed Action** entails use of the entire area of all owned parcels for a housing development and the impact of all features. Since the entire site would be utilized, the only post-project flow of water onsite would be associated with storm water runoff and water quality basins necessary to reduce flooding and for some nutrient and waste processing. All mitigation for impacts would occur offsite. This alternative was judged to be infeasible because it failed to achieve the requirement to minimize and avoid impacts to jurisdictional areas.

2. **Reduced Federal Action** includes avoidance of most jurisdictional features (particularly the higher quality portions) and onsite reconstruction and restoration of a significant area surrounding avoided jurisdictional area. This alternative would impact 2,657 sq. ft. (0.061 acre) of CDFW state streambed and 10,983 sq. ft. (0.252 acre) of CDFW state wetland. A total of 1,521 sq. ft. (0.035 acre) of federal WoUS would be impacted. The project proposes to avoid 41,644 sq. ft. (0.956 acre) of riparian habitat and 4,000 sq. ft. (0.092 acre) of unvegetated drainages. Onsite mitigation includes a total area of 156,380 sq. ft. (3.59 acre and 416 lf), of which 0.96 acre of state wetland is avoided and preserved, 0.092 acre of state streambed and 0.03 acre of WoUS is avoided and restored, and an additional 2.63 acres of state streambed/WoUS is restored by the removal of debris, exotic tamarisk, and weeds. This alternative is feasible because it minimizes impacts and avoids, enhances, and restores jurisdictional areas and riparian/riverine habitat that have been damaged by dryland farming in the area. However, preserved and restored habitat would be surrounded by residential development and habitat value would subsequently be much lower than habitat that is part of a larger contiguous block of open space.

3. **No Jurisdictional Impacts Alternative** would require avoidance of all jurisdictional areas within the owned parcels. Dryland farming and/or grazing activities would continue to occur, no conservation of the remaining riparian vegetation would occur, and no reconstruction or restoration activities would occur. This option is considered impractical because it would not allow for infrastructure and circulation elements

required to support housing in the area and the reduction of allowed units makes this project alternative infeasible.

4. **Offsite Alternative** would involve purchasing an equivalent sized property with no jurisdictional areas present. This alternative was judged to be impractical when the cost of engineering, land planning, and the value of the current land was considered.

5. **Compatible Use Alternative** would incorporate the existing onsite drainages into the compatible use areas. This alternative would impact 9,541 sq. ft. (0.22 acre) of CDFW streambed and 5,702 sq. ft. (0.13 acre) of CDFW state wetland. A total of 1,301 sq. ft. (0.03 acre) of federal WoUS would be impacted. Further, the project proposes to incorporate the remaining jurisdictional areas on the site into the Compatible Use Area: 9,273 sq. ft. (0.21 acre) of state streambed and 34,749 sq. ft. (0.80 acre) of state wetland, including 3,096 sq. ft. (0.07 acre) of WoUS. Offsite mitigation at no net loss to functions and values would be accomplished through purchase of credits at an approved mitigation bank. This is feasible because it compensates for impacted jurisdictional areas through offsite preservation of habitat that is part of a larger contiguous area of habitat. Habitat value would consequently be substantially higher than onsite habitat surrounded by development (i.e., Alternative 2). This alternative was discussed and agreed to at a meeting between Richland, L&L, USFWS, CDFW, RWQCB, USACE, and the Western Riverside County Regional Conservation Authority on April 11, 2018.

5.2) Least Environmentally Damaging Practical Alternative

L&L evaluated all five alternatives and found that Alternative 5, the Compatible Use Alternative, meets the project goal of providing residential housing in the Menifee area and compensates for impacts to jurisdictional areas and riparian/riverine habitat by providing increased habitat value.

Compatible Use

Compatible use areas allow for the continued use of the land as has been occurring but in general allow for non-destructive uses.

6.0) CONCLUSIONS

The purpose of this study was to verify and update the results of a 2011 jurisdictional delineation that identified jurisdictional waters/wetlands and MSHCP Riparian/Riverine areas present onsite and to determine which areas of the property would be impacted by planned development.

The jurisdictional areas identified on the project site were updated as 18,814 sq. ft. (0.43 acre) of CDFW unvegetated state streambed and 40,451 sq. ft. (0.93 acres) of CDFW state wetland. The survey also identified 4,397 sq. ft. (0.10 acre) of USACE WoUS, none of which is USACE federal wetland. A total of 59,265 sq. ft. (1.361 acres) of Western Riverside County MSHCP Riparian/Riverine habitat was identified within the proposed project area (see Figure 7 and Table 2 in Appendix A).

The current development plan indicates impacts to 9,541 sq. ft. (0.22 acre) of CDFW state streambed, 5,702 sq. ft. (0.13 acre) of CDFW state wetland, and 1,301 sq. ft. (0.03 acre) of USACE WoUS. Further, the project proposes to retain 9,273 sq. ft. (0.21 acre) of state streambed and 34,749 sq. ft. (0.80 acre) of state wetland, including 3,096 sq. ft. (0.07 acre) of WoUS, by incorporating these areas onsite within a Compatible Use Area.

Regulatory agency permits/agreements and an MSHCP Determination of Biologically Equivalent or Superior Preservation (DBESP) will be required before project-related impacts occur.

This document has been prepared to assist in planning and to accompany permit applications or agreements under federal or state law.

List of plant and wildlife species identified on the Golden Meadows site.

Plants [N=115]

	Scientific Name	**Common Name**
	VASCULAR PLANTS	
	Dicotyledons	
	ADOXACEAE	**MUSKROOT FAMILY**
	Sambucus nigra ssp. *cerulea* (*S. mexicana*)	Mexican elderberry, blue elderberry
	AMARANTHACEAE	**AMARANTH FAMILY**
*	*Amaranthus albus*	Tumbleweed, tumbling pigweed
	ANACARDIACEAE	**SUMAC or CASHEW FAMILY**
*	*Schinus molle*	Peruvian pepper tree
	APIACEAE	**CELERY FAMILY**
	Daucus pusillus	Rattlesnake weed, wild carrot
	ASTERACEAE	**ASTER FAMILY**
	Acourtia microcephala (*Perezia microcephala*)	Scapellote, perezia
	Ambrosia acanthicarpa	Annual bur-sage, annual sandbur
*	*Anthemis cotula*	Mayweed, dog mayweed
	Artemisia californica	California sagebrush
	Baccharis salicifolia (*B. glutinosa*)	Mulefat
	Bebbia juncea	Sweetbush
*	*Centaurea melitensis*	Tocalote
	Chaenactis artemisiifolia	White pincushion, wormwood pincushion
	Corethrogyne filaginifolia var. *filaginifolia* (*Lessingia filaginifolia*)	California-aster, sand-aster
	Deinandra fasciculata (*Hemizonia fasciculata*)	Fascicled tarplant, slender tarweed
	Encelia farinosa	Brittlebush
	Erigeron canadensis (*Conyza canadensis*)	Horseweed, mare's tail
	Eriophyllum confertiflorum	Golden-yarrow
	Eriophyllum multicaule	Many-stem woolly daisy
	Gutierrezia californica (*G. bracteata*)	California matchweed
	Helianthus annuus	Western sunflower
*	*Lactuca serriola*	Prickly lettuce

	Scientific Name	**Common Name**
	Lasthenia californica (L. chrysostoma)	California goldfields
	Layia platyglossa	Tidy-tips
	Logfia filaginoides (Filago californica)	California filago
*	*Matricaria discoidea (Chamomilla suaveolens, M. matricarioides)*	Pineapple weed
	Rafinesquia californica	California chicory
*	*Senecio vulgaris*	Common groundsel
*	*Sonchus oleraceus*	Common sow thistle
	Stephanomeria virgata	Wreath plant
	Stylocline gnaphaloides	Everlasting neststraw
	Tetradymia comosa	Hairy horsebrush, common-thorn
	Uropappus lindleyi (Microseris lindleyi, M. linearifolia)	Silverpuffs
*?	*Xanthium spinosum*	Spiny cocklebur
	BORAGINACEAE	**BORAGE OR WATERLEAF FAMILY**
	Amsinckia intermedia (A. menziesii var. intermedia)	Large flower rancher's fiddleneck
	Cryptantha intermedia	Common cryptantha
	Heliotropium curassavicum	Wild heliotrope
	Pectocarya linearis	Slender pectocarya
	Phacelia minor	Wild Canterbury bells
	Phacelia ramosissima	Branching phacelia
	Plagiobothrys sp.	Popcornflower
	BRASSICACEAE	**MUSTARD FAMILY**
*	*Brassica nigra*	Black mustard
*	*Hirschfeldia incana (Brassica geniculata)*	Shortpod mustard
	Lepidium nitidum	Shining peppergrass
*	*Raphanus sativus*	Wild radish
*	*Sisymbrium irio*	London rocket
*	*Sisymbrium orientale*	Wild mustard, hare's ear cabbage
	Thysanocarpus curvipes	Lacepod
	CACTACEAE	**CACTUS FAMILY**
	Cylindropuntia californica var. *parkeri (Opuntia parryi)*	Valley cholla
	CHENOPODIACEAE	**GOOSEFOOT FAMILY**
*	*Chenopodium murale*	Nettle-leaved goosefoot, lamb's quarters
*	*Salsola tragus*	Russian thistle
	CONVOLVULACEAE	**MORNING-GLORY FAMILY**
	Calystegia macrostegia	Morning-glory

	Scientific Name	Common Name
	Cuscuta californica	Chaparral dodder, witch's hair
CRASSULACEAE		**STONECROP FAMILY**
	Crassula connata (C. erecta)	Pygmy-weed, pygmy stonecrop
CUCURBITACEAE		**GOURD FAMILY, CUCUMBER FAMILY**
	Cucurbita foetidissima	Calabazilla
	Marah macrocarpa	Chilicothe, wild cucumber
EUPHORBIACEAE		**SPURGE FAMILY**
	Croton setiger (C. setigerus, Eremocarpus setiger, E. setigerus)	Turkey-mullein, doveweed
	Euphorbia albomarginata (Chamaesyce albomarginata)	Rattlesnake sandmat, rattlesnake weed
FABACEAE		**LEGUME FAMILY, PEA FAMILY**
	Acmispon americanus (Lotus purshianus, L. unifoliatus)	"Spanish" clover
	Acmispon glaber (Lotus scoparius)	Deerweed
	Lupinus sp.	Unid. lupine
	Lupinus bicolor	Miniature lupine, dove lupine
*	*Medicago polymorpha*	California burclover
*	*Vicia villosa*	Winter vetch
GERANIACEAE		**GERANIUM FAMILY**
*	*Erodium botrys*	Long-beak filaree
*	*Erodium cicutarium*	Redstem filaree
LAMIACEAE		**MINT FAMILY**
*	*Marrubium vulgare*	Horehound
	Salvia apiana	White sage
	Salvia columbariae	Chia
	Salvia mellifera	Black sage
	Trichostema lanceolatum	Vinegar weed
MALVACEAE		**MALLOW FAMILY**
*	*Malva parviflora*	Cheeseweed
MYRSINACEAE		**MYRSINE FAMILY**
*	*Anagallis arvensis*	Scarlet pimpernel
MYRTACEAE		**MYRTLE FAMILY, EUCALYPTUS FAMILY**
*	*Eucalyptus* sp.	Ornamental eucalyptus

	Scientific Name	Common Name
	NYCTAGINACEAE	**FOUR O'CLOCK FAMILY**
	Mirabilis laevis var. *crassifolia (M. californica)*	Wishbone bush
	ONAGRACEAE	**EVENING-PRIMROSE FAMILY**
	Camissonia sp.	Unid. evening-primrose
	Eulobus californica (Camissonia californica)	California false mustard, mustard evening primrose
	PAPAVERACEAE	**POPPY FAMILY**
	Eschscholzia californica	California poppy
	PHRYMACEAE	**LOPSEED FAMILY**
	Mimulus aurantiacus (M. puniceus, M. longiflorus)	Bush monkeyflower,sticky monkeyflower
	Mimulus guttatus	Seep monkeyflower
	PLANTAGINACEAE	**PLANTAIN FAMILY**
	Antirrhinum nuttallianum	Nuttall snapdragon, violet snapdragon
	Keckiella antirrhinoides	Yellow bush-penstemon
	Plantago erecta	California plantain
	POLEMONIACEAE	**PHLOX FAMILY**
	Eriastrum sapphirinum	Sapphire woollystar
	Navarretia hamata	Hooked navarretia
	POLYGONACEAE	**BUCKWHEAT FAMILY**
	Chorizanthe fimbriata	Fringed spineflower
**	*Chorizanthe polygonoides* var. *longispina*	Long-spined spineflower
	Eriogonum fasciculatum var. *foliolosum*	Leafy California wild buckwheat, interior California buckwheat
	Eriogonum fasciculatum var. *polifolium*	Mojave Desert California buckwheat
*	*Polygonum aviculare ssp. depressum (P. arenastrum)*	Common knotweed
*	*Rumex crispus*	Curly dock
	ROSACEAE	**ROSE FAMILY**
	Adenostoma fasciculatum	Chamise
	RUBIACEAE	**MADDER FAMILY, COFFEE FAMILY**
*?	*Galium aparine*	Goose grass, annual bedstraw
	SALICACEAE	**WILLOW FAMILY**
	Populus fremontii ssp. *fremontii*	Fremont cottonwood
	Salix lasiolepis	Arroyo willow

Scientific Name	Common Name
SCROPHULARIACEAE	**FIGWORT FAMILY, SNAPDRAGON FAMILY**
Scrophularia californica	California figwort, coast figwort
SOLANACEAE	**NIGHTSHADE FAMILY**
Datura wrightii (D. meteloides)	Jimsonweed, tolguacha
* *Nicotiana glauca*	Tree tobacco
Solanum americanum *? *(S. nodiflorum)*	White nightshade
TAMARICACEAE	**TAMARISK FAMILY**
* *Tamarix species*	Tamarisk
URTICACEAE	**NETTLE FAMILY**
* *Urtica urens*	Dwarf nettle
ZYGOPHYLLACEAE	**CALTROP FAMILY**
* *Tribulus terrestris*	Puncture vine
Monocotyledons	
AGAVACEAE	**CENTURY PLANT FAMILY, AGAVE FAMILY**
Hesperoyucca whipplei (Yucca whipplei)	Chaparral yucca
LILIACEAE	**LILY FAMILY**
Calochortus splendens	Splendid mariposa lily
POACEAE	**GRASS FAMILY**
* *Avena barbata*	Slender wild oat
* *Avena fatua*	Wild oat
* *Bromus species*	Non-native brome
* *Bromus diandrus (B. rigidus)*	Ripgut brome
* *Bromus madritensis* ssp. *rubens (B. rubens)*	Red brome
* *Hordeum murinum*	Wall barley, hare barley
* *Lamarckia aurea*	Goldentop grass
* *Phalaris species*	Unid. canary grass
* *Schismus barbatus*	Mediterranean schismus
* *Triticum aestivum*	Common wheat (cultivated)
THEMIDACEAE	**BRODIAEA FAMILY**
Dichelostemma capitatum (D. pulchella, Brodiaea pulchella)	Blue dicks, wild hyacinth
Muilla maratima	Common muilla

* non-native species ** special status species

Date: June 20, 2019

Biological Resources: (Check the level of impact that applies to the following questions.)

Potentially Significant Impact	Less than Significant Impact with Mitigation Incorporated	Less than Significant Impact	No Impact

a) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state conservation plan?

☐ ■ ☐ ☐

b) Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)?

☐ ■ ☐ ☐

c) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, or U. S. Wildlife Service?

☐ ■ ☐ ☐

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ■ ☐ ☐

LEVEL OF SIGNIFICANCE CHECKLIST
For Biological Resources
(Submit two copies to the County)

e) Have a substantial adverse effect on any riparian habitat, or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or the U.S. Fish and Wildlife Service?

☐ ■ ☐ ☐

f) Have a substantial adverse effect on federally protected wetlands, as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pools, coastal, etc.) through direct removal, filling, hydrological interruption)

☐ ■ ☐ ☐

g) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

☐ ■ ☐ ☐

Findings of Fact:

A mapped blueline stream is present onsite and associated with riparian/riverine vegetation.

Six (6) special status species have been identified onsite during past and present surveys (burrowing owl, coastal California gnatcatcher, Cooper's hawk, white-tailed kite, California horned lark, and black-tailed jackrabbit).

Potential nesting habitat for burrowing owl and other bird species protected by the migratory bird treaty act is present onsite.

Proposed Mitigation:

Avoidance and/or onsite or offsite restoration of riparian habitat is recommended.

Preconstruction surveys for burrowing owl and other nesting bird species are recommended prior to disturbance of the site.

Monitoring Recommended:

SECTION 1 - Project Description

Introduction

The purpose of this report is to present the backup hydrology that will be used for the planning and design of the major modification to the existing 'Golden Meadows', tract 31194 project. This report also serves as the basis for analyzing and designing the storm drain, retention systems and earthen channel within the project site.

Project Description

The proposed modification to the approved hydrology analysis for tract 31194 consists of modifying drainage management areas 'A', 'C' and 'D'. The proposed modifications will increase the residential density and therefore change the hydraulic modeling of the project. This supplemental analysis is intended to provide the backup hydrology calculations to support the proposed modifications to the residential development.

The underlying project known as Tract 31194 "Golden Meadows" consists of 206.8 acres, and proposes the construction of 474 single family homes (103.2 ac.), 7.3 acres of park, 50.0 acres of open space, 2.7 acres of basins and 43.6 acres of paved streets, un-paved trails, and general improvements related to a residential development. The proposed project site is located within the San Jacinto watershed portion Santa Ana River, within the City of Menifee, in the County of Riverside, California. The project site is bounded by Wickerd Road to the north, Ascot Way to the east, vacant land to the south and Evans Road to the west (see included vicinity map).

Existing Conditions

The site is currently in a natural condition, containing grasses and brush. Topographically, the site is generally hilly, with a mild slope toward the north with a topographic relief on the order of 300 feet. The lowest elevation of approximately 1,500 feet above mean sea level (msl) is located in the northwest corner of the site. The highest elevation of approximately 1,800 feet (msl) is located along the westerly property line. The existing drainage pattern of the modification area divides the site into three distinct drainage areas, DMA 'A', 'C' and 'D'. DMA 'A' consists of the eastern most portion of the site, approximately 173.2 acres and drains northwesterly. DMA 'C' consists of the western most portion of the site, approximately 18.6 acres and drains southeasterly. DMA 'D' consists of the south portion of the site and is approximately 60.0 acres and drains northerly. All three drainage areas generally drain as sheet flow or in small natural gullies directly into natural creeks throughout the site.

Proposed Conditions

On-Site

As required by the Riverside Regional Water Quality Control Board (Santa Ana Watershed), and the MS4 Permit (Municipal Separate Storm Sewer System), the proposed grading of this site has been designed to be consistent with the existing drainage patterns. The proposed development will further subdivide the overall hydrological drainage areas into smaller drainage management areas, designated 'A' through 'L'. The major modification to Tract 31194 will revise the drainage pattern of the proposed condition DMA'A', 'C' and 'D'. We are limiting our supplemental analysis to these three areas, please refer to the underlying hydrology analysis prepared by Hunsaker & Associates for information and calculations pertaining to the rest of the development. The revised DMA 'A' comprises of 95.88 acres and is tributary to water quality and detention basin 'A' located in the northwestern most corner of the project. The revised DMA 'C' comprises of 14.19 acres and is tributary to water quality and detention basin 'C' located in the southeastern most corner of the project. The revised DMA 'D' comprises of 54.51 acres and is tributary to water quality and detention 'D' located in the center of the project.

The proposed on-site water quality and detention basins are being designed to meet water quality requirements and mitigate for any increase in run-off associated with the development of areas 'A', 'C' and 'D'. Furthermore, basins A and C are being designed as 'Extended Detention Basins', each which will include a concrete lined forebay, low flow gravel diversion channels, and a sand filter with a metered outlet structure. Please refer to the WQMP and Storm Drain Plans for this project for complete basin design and outlet structure details. Basin D is designed as an infiltration basin, which is sized to capture and infiltrate the water quality volume in its entirety.

The proposed facilities are designed to convey the 100-year storm event, we have analyzed the site based on the pre and post development conditions for the 2-year, 10-year, and 100-year storm events. RCFC&WCD rational and unit hydrograph methodologies were utilized to determine pre and post development flow rates. The results of this analysis are summarized in the following tables.

Analysis – Drainage Management Area 'A'

DMA 'A' is comprised of 95.88 acres. The proposed development will increase the peak flow rate and volume of storm water run-off, the largest peak flow rate increase was experienced during the 2-year 24-hour storm event, where the anticipated flow rate increased by 7.5 cfs, as compared to natural condition. This increase is being mitigated by the proposed extended detention and water quality basin located on the northerly most portion of the site.

DRAINAGE MANAGEMENT AREA 'A' UNIT HYDROGRAPH – PEAK FLOW RATE (cfs)									
	2 YEAR			10 YEAR			100 YEAR		
	Ex	Pro.	Routed	Ex	Pro.	Routed	Ex	Pro.	Routed
1 HOUR	108.4	90.4	**-18.0**	232.9	167.3	**-65.6**	389.4	274.5	**-114.9**
3 HOUR	51.6	39.3	**-12.3**	144.6	89.1	**-55.5**	256.5	155.7	**-100.8**
6 HOUR	44.6	34.4	**-10.2**	140.1	81.9	**-58.2**	255.6	148.5	**-107.1**
24 HOUR	4.6	12.1	**7.5**	44.4	24.8	**-19.6**	102.6	57.2	**-45.4**

The largest storm volume increase was experienced during the 2 year 24 hour storm event, where the anticipated run-off is increased by 4.51 acre feet from the natural condition. This increase is being mitigated by the proposed extended detention and water quality basin located on the northerly most portion of the site.

DRAINAGE MANAGEMENT AREA 'A' UNIT HYDROGRAPH – STORM VOLUME (Ac-Ft)									
	2 YEAR			10 YEAR			100 YEAR		
	Ex	Pro.	Mitigation Volume	Ex	Pro.	Mitigation Volume	Ex	Pro.	Mitigation Volume
1 HOUR	3.23	2.62	**-0.61**	9.46	5.25	**-4.21**	17.46	9.69	**-7.77**

Drainage Management Area 'C'

DMA 'C' is comprised of 14.19 acres. The proposed development will increase the peak flow rate and volume of storm water run-off, the largest peak flow rate increase was experienced during the 2-year 1-hour storm event, where the anticipated flow rate increased by 2.8 cfs, as compared to natural condition. This increase is being mitigated by the proposed extended detention and water quality basin located on the northerly most portion of the site.

DRAINAGE MANAGEMENT AREA 'C' UNIT HYDROGRAPH – PEAK FLOW RATE (cfs)									
	2 YEAR			10 YEAR			100 YEAR		
	Ex	Pro.	Routed	Ex	Pro.	Routed	Ex	Pro.	Routed

100 YEAR	**14.19 ac.**	**10.17 min.**	**29.2 %**	**36.9 cfs**

Drainage Management Area 'D'

DMA 'D' is comprised of 54.51 acres. The proposed development will increase the peak flow rate and volume of storm water run-off, the largest peak flow rate increase was experienced during the 2-year 3-hour storm event, where the anticipated flow rate increased by 9.8 cfs, as compared to natural condition. This increase is being mitigated by the proposed extended detention and water quality basin located on the northerly most portion of the site.

DRAINAGE MANAGEMENT AREA 'D' UNIT HYDROGRAPH – PEAK FLOW RATE (cfs)

Methodology

This hydrology report is to be used only to analyze flow to, through, and out of the site using the Riverside County Rational Method. In regard to pipe sizing, the hydrology programs were utilized only as a tool for obtaining preliminary sizing of the storm drain facilities by allowing the program to determine minimum pipe sizes. The actual storm drain system and pipe sizes shall be designed per Riverside County Flood Control District criteria. Civil Design Version 7.0 Computer Software Program and AES Engineering Software 2011 version were used in generating the hydrological and hydraulic analysis for this report.

Conclusion

The development of this project does not propose a significant change over the existing conditions as illustrated in the previous tables. Peak flow rates however, did increase as would be expected with the addition of impervious area. This increase in flow rate and any increase in run-off volume will be mitigated by the proposed detention and water quality basins throughout the site.

Based upon the results of this report, it is concluded that drainage facilities discussed above will adequately protect the site area from flood damage associated with the 100-year storm event. The proposed facilities, with ultimate development and adequate maintenance, will convey flows safely through the site area in accordance with Riverside County requirements.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Western Riverside Area, California
Survey Area Data: Version 11, Sep 12, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 24, 2015—Feb 26, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Runoff from this stream =     20.956(CFS)
Time of concentration =   12.73 min.
Rainfall intensity =     2.957(In/Hr)
Summary of stream data:

Stream   Flow rate      TC            Rainfall Intensity
 No.       (CFS)       (min)                 (In/Hr)

1       87.660     12.54           2.980
2       20.956     12.73           2.957
Largest stream flow has longer or shorter time of concentration
Qp =     87.660 + sum of
         Qa          Tb/Ta
         20.956 *    0.986 =     20.652
Qp =    108.312

Total of 2 main streams to confluence:
Flow rates before confluence point:
      87.660      20.956
Area of streams before confluence:
       41.880        7.470

Results of confluence:
Total flow rate =    108.312(CFS)
Time of concentration =    12.543 min.
Effective stream area after confluence  =     49.350(Ac.)

TRACT 31194 - GOLDEN MEADOWS HYDROLOGY STUDY – AREA 'A'
EXISTING CONDITION 'OVERALL' UNIT HYDROGRAPH - 100 YEAR 6 HOUR STORM
HUNSAKER & ASSOCIATES, FEBRUARY 2019
BY: BRIAN LOWELL, PE
------------------------------------------------------------------------
Drainage Area =     173.20(Ac.)  =      0.271 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment =     173.20(Ac.)  =      0.271 Sq. Mi.
Length along longest watercourse =    4753.00(Ft.)
Length along longest watercourse measured to centroid =    1892.00(Ft.)
Length along longest watercourse =      0.900 Mi.
Length along longest watercourse measured to centroid =      0.358 Mi.
Difference in elevation =     254.00(Ft.)
Slope along watercourse =    282.1628 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time =    0.160 Hr.
Lag time =     9.62 Min.
25% of lag time =     2.40 Min.
40% of lag time =     3.85 Min.
Unit time =     5.00 Min.
Duration of storm = 6 Hour(s)
User Entered Base Flow =     0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]       Rainfall(In)[2]      Weighting[1*2]
      173.20           1.20                207.84

100 YEAR Area rainfall data:

Area(Ac.)[1]       Rainfall(In)[2]      Weighting[1*2]
      173.20           3.00                519.60

STORM EVENT (YEAR) =  100.00
Area Averaged 2-Year Rainfall =    1.200(In)
Area Averaged 100-Year Rainfall =    3.000(In)

Point rain (area averaged) =    3.000(In)
Areal adjustment factor =   99.94 %
Adjusted average point rain =    2.998(In)

Sub-Area Data:
Area(Ac.)         Runoff Index   Impervious %
   173.200           83.70          0.000
 Total Area Entered =    173.20(Ac.)
```

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
83.7	93.2	0.088	0.000	0.088	1.000	0.088
					Sum (F) =	0.088

Area averaged mean soil loss (F) (In/Hr) = 0.088
Minimum soil loss rate ((In/Hr)) = 0.044
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

TRACT 31194 - GOLDEN MEADOWS HYDROLOGY STUDY – AREA ‘C’
EXISTING CONDITION 'OVERALL' UNIT HYDROGRAPH - 2 YEAR 6 HOUR STORM
HUNSAKER & ASSOCIATES, FEBRUARY 2019
BY: BRIAN LOWELL, PE

Drainage Area = 18.63(Ac.) = 0.029 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 18.63(Ac.) = 0.029 Sq. Mi.
Length along longest watercourse = 1415.00(Ft.)
Length along longest watercourse measured to centroid = 500.00(Ft.)
Length along longest watercourse = 0.268 Mi.
Length along longest watercourse measured to centroid = 0.095 Mi.
Difference in elevation = 191.00(Ft.)
Slope along watercourse = 712.7067 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.051 Hr.
Lag time = 3.07 Min.
25% of lag time = 0.77 Min.
40% of lag time = 1.23 Min.
Unit time = 5.00 Min.
Duration of storm = 6 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
18.63	1.20	22.36

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
18.63	3.00	55.89

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.200(In)
Area Averaged 100-Year Rainfall = 3.000(In)

Point rain (area averaged) = 1.200(In)
Areal adjustment factor = 99.99 %
Adjusted average point rain = 1.200(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
18.630	80.30	0.000

Total Area Entered = 18.63(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
80.3	63.4	0.433	0.000	0.433	1.000	0.433
					Sum (F) =	0.433

Area averaged mean soil loss (F) (In/Hr) = 0.433
Minimum soil loss rate ((In/Hr)) = 0.217
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

TRACT 31194 - GOLDEN MEADOWS HYDROLOGY STUDY – AREA ‘C’
EXISTING CONDITION 'OVERALL' UNIT HYDROGRAPH - 2 YEAR HOUR STORM
HUNSAKER & ASSOCIATES,
BY: BRIAN LOWELL, PE

Drainage Area = 18.63(Ac.) = 0.029 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 18.63(Ac.) = 0.029 Sq. Mi.
Length along longest watercourse = 1415.00(Ft.)
Length along longest watercourse measured to centroid = 500.00(Ft.)
Length along longest watercourse = 0.268 Mi.
Length along longest watercourse measured to centroid = 0.095 Mi.
Difference in elevation = 191.00(Ft.)
Slope along watercourse = 712.7067 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.051 Hr.
Lag time = 3.07 Min.
25% of lag time = 0.77 Min.
40% of lag time = 1.23 Min.
Unit time = 15.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
18.63	2.00	37.26

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
18.63	5.00	93.15

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 2.000(In)
Area Averaged 100-Year Rainfall = 5.000(In)
